

Remove Cable Ties and Straps Efficiently With No Damage to Wire Insulation

Now you can quickly remove cable ties without damaging the wire harness. The safety guards on the tip of the MG-1300 cable tie removal tool slides behind the cable tie strap to prevent the sharp blades from contacting and damaging the bundled items. The ergonomic, cushion grip handles and scissor action produce a clean cut.

Also use the MG-1300 when repairing and retrofitting wire harnesses & hose assemblies, removing packaged items, prototyping & testing products, and many other factory and field uses. The MG-1300 cuts all cable tie strap widths.

This cable tie removal tool provides a long life when cutting plastic, thin copper, and aluminum. It is made of heat treated alloy steel with a Rockwell hardness range of 53-58Rc.

Versatile Tool Also Cuts Copper Wire

Part Number	Cuts Cable Tie Sizes	Tool Length	Tool Width	Description
MG-1300	18 lb. to 250 lb.	6.49"	2.35"	Standard Handle Length with Pointed Nose for Tight Spaces
