

**Important notes about Classic Panel Mount Indicator Catalog Pages**

**SCROLL DOWN TO VIEW CATALOG PAGE**

This catalog page is out-of-print and is used with the understanding that the information shown could be out-of-date. In many cases, part numbers shown on this page are discontinued. Most notably, many “Complete Assembly” parts, which consist of a cap and a base, can no longer be ordered by the 14-digit ordering code. To obtain these parts, please order the cap and base part numbers separately. This process provides the components contained with the original “Complete Assembly” part number.

All Dialight Classic Panel Mount Indicators need a leading 3-digit numerical series. In some cases, this catalog will show a 2-digit series. In this case, please add a leading zero. For example, 81-0211-300 becomes 081-0211-300.

Part numbers listed on Dialight catalog pages designate parts with Red lenses. For ordering lens colors other than red, consult the chart below. In most cases, the color is dictated by the 7<sup>th</sup> digit. For example, 095-0932-003 for a green cap.

Lens Colors	
1 - Red	5 - White
2 - Green	6 - Light Yellow
3 - Yellow	7 - Clear
4 - Blue

# Neon Indicator Lights

It is possible to provide indicator lights of very small dimensions, that may be applied directly to commercial voltage circuits when T-2 neon lamps are used as the light sources.

These neon glow lamps are very uniform in their performance and exceptionally free of early failures. When recommended series resistors are used, very long minimum life ratings apply. High lamp reliability makes it reasonable to offer these lights with non-replaceable lamps.

Lamp C2A (NE-2H) is used in these lights for all applications on 110-125 volts, alternating current. The necessary current-limiting

resistor is built into the light housing so that the full voltage may be applied to the terminals. Two levels of operation are provided by the choice of the resistor value—either 22K or 33K ohms. Higher light output is provided by the 22K option and minimum life is still long—5,000 hours. For DC circuits of 105-125 volts, the neon lamp used is A9A (NE-2E). Even lower voltages may be accommodated by the use of selected lamps. Data will be provided on application.

MOUNT FROM REAR IN 3/8" CLEARANCE HOLE

## WITH BUILT-IN RESISTOR

In this series of assemblies, the non-replaceable neon lamp is combined with a built-in current-limiting resistor. Indicator lights are offered with a choice of stovepipe, flat or short cylindrical lens. The latter two may be hot-stamped or engraved if desired. See "Hot-Stamped or Engraved Legends" on Page 25B

See "Materials and Finishes" on facing page.

Hot-Stamped or Engraved Legends: See description on Page 25B.
