

Overvoltage protected AC switch (ACS™)

Datasheet - production data

Applications

- AC static switching in appliance control systems
- Drive of low power high inductive or resistive loads like:
 - Relay, valve, solenoid, dispenser
 - Pump, fan, micro-motor
 - Defrost heater

Description

The ACS120 belongs to the AC line switch family. This high performance switch circuit is able to control a load of up to 2 A.

The ACS™ switch embeds a high voltage clamping structure to absorb the inductive turn off energy and a gate level shifter driver to separate the digital controller from the main switch. It is triggered with a negative gate current flowing out of the gate pin.

Features

- Blocking voltage: $V_{DRM} / V_{RRM} = \pm 700 \text{ V}$
- Avalanche controlled: $V_{CL} \text{ typ.} = 1100 \text{ V}$
- Nominal conducting current: $I_{T(RMS)} = 2 \text{ A}$
- Gate triggering current: $I_{GT} < 10 \text{ mA}$
- High noise immunity: static $dV/dt > 500 \text{ V}/\mu\text{s}$

Benefits

- Needs no more external protection snubber or varistor
- Enables equipment to meet IEC 61000-4-5
- Reduces component count up to 80%
- Interfaces directly with the micro controller
- Eliminates any gate kick back on the micro-controller
- Allows straightforward connection of several AC switches on same cooling pad

Figure 1. Functional diagram

1 Characteristics

Table 1. Absolute ratings (limiting values)
For either positive or negative polarity of pin OUT voltage in respect to pin COM voltage

| Symbol | Parameter | | Value | Unit | |
|-------------------|---|-----------------------|------------------------|------|------------------|
| V_{DRM}/V_{RRM} | Repetitive peak off-state voltage | | 700 | V | |
| $I_{T(RMS)}$ | On-state RMS current full cycle sine wave 50 to 60 Hz | DPAK | $T_C = 119\text{ °C}$ | 2 | A |
| | | TO-220FPAB | $T_C = 117\text{ °C}$ | | |
| | | TO-220AB | $T_C = 119\text{ °C}$ | | |
| I_{TSM} | Non repetitive surge peak on-state current T_J initial = 25 °C, full cycle sine wave | | $t_p = 20\text{ ms}$ | 20 | A |
| | | | $t_p = 16.7\text{ ms}$ | 21 | A |
| I^2t | Fusing capability | | $t_p = 10\text{ ms}$ | 2.6 | A ² s |
| di/dt | Repetitive on-state current critical rate of rise $I_G = 10\text{ mA}$ ($t_r < 100\text{ ns}$) | $T_J = 125\text{ °C}$ | $f = 120\text{ Hz}$ | 50 | A/ μ s |
| V_{PP} | Non repetitive line peak pulse voltage ⁽¹⁾ | | 2 | kV | |
| T_{stg} | Storage temperature range | | - 40 to + 150 | °C | |
| T_J | Operating junction temperature range | | - 30 to + 125 | °C | |
| T_L | Maximum lead soldering temperature during 10 s | | 260 | °C | |

1. According to test described by IEC 61000-4-5 standard and [Figure 17](#).

Table 2. Switch Gate characteristics (maximum values)

| Symbol | Parameter | Value | Unit |
|-------------|--|-------|------|
| $P_{G(AV)}$ | Average gate power dissipation | 0.1 | W |
| I_{GM} | Peak gate current ($t_p = 20\text{ }\mu$ s) | 1 | A |
| V_{GM} | Peak positive gate voltage (in respect to pin COM) | 5 | V |

Table 3. Thermal resistances

| Symbol | Parameter | | Value | Unit |
|---------------|---------------------|---|-------|------|
| $R_{th(j-a)}$ | Junction to ambient | $S = 0.5\text{ cm}^2$ ⁽¹⁾ DPAK | 70 | °C/W |
| | | TO-220FPAB | 60 | °C/W |
| | | TO-220AB | 60 | °C/W |
| $R_{th(j-c)}$ | Junction to case | DPAK | 2.6 | °C/W |
| | | TO-220FPAB | 3.5 | °C/W |
| | | TO-220AB | 2.6 | °C/W |

1. S = Copper surface under tab

Table 4. Parameter description

| Symbol | Parameter description |
|----------------------|---|
| I_{GT} | Triggering gate current |
| V_{GT} | Triggering gate voltage |
| V_{GD} | Non-triggering gate voltage |
| I_H | Holding current |
| I_L | Latching current |
| V_{TM} | Peak on-state voltage drop |
| V_{TO} | On state threshold voltage |
| R_d | On state dynamic resistance |
| I_{DRM} / I_{RRM} | Maximum forward or reverse leakage current |
| dV/dt | Critical rate of rise of off-state voltage |
| (dV/dt) _c | Critical rate of rise of commutating off-state voltage |
| (dI/dt) _c | Critical rate of decrease of commutating on-state current |
| V_{CL} | Clamping voltage |
| I_{CL} | Clamping current |

Table 5. Electrical characteristics

| Symbol | Test conditions | | | | Values | Unit |
|----------------------|---|-----------|---------------------|-----|--------|------------|
| I_{GT} | $V_{OUT} = 12V$ (DC), $R_L = 140 \Omega$ | QII -QIII | $T_J = 25^\circ C$ | Max | 10 | mA |
| V_{GT} | $V_{OUT} = 12V$ (DC), $R_L = 140 \Omega$ | QII -QIII | $T_J = 25^\circ C$ | Max | 1 | V |
| V_{GD} | $V_{OUT} = V_{DRM}$, $R_L = 3.3 k\Omega$ | | $T_J = 125^\circ C$ | Min | 0.15 | V |
| I_H | $I_{OUT} = 100$ mA gate open | | $T_J = 25^\circ C$ | Max | 45 | mA |
| I_L | $I_G = 20$ mA | | $T_J = 25^\circ C$ | Max | 65 | mA |
| V_{TM} | $I_{OUT} = 2.8$ A, $t_p = 380 \mu s$ | | $T_J = 25^\circ C$ | Max | 1.3 | V |
| V_{TO} | | | $T_J = 125^\circ C$ | Max | 0.85 | V |
| R_d | | | $T_J = 125^\circ C$ | Max | 200 | m Ω |
| I_{DRM} / I_{RRM} | $V_{OUT} = 700$ V | | $T_J = 25^\circ C$ | Max | 2 | μA |
| | | | $T_J = 125^\circ C$ | Max | 200 | |
| dV/dt | $V_{OUT} = 460$ V gate open | | $T_J = 110^\circ C$ | Min | 500 | V/ μs |
| (dI/dt) _c | (dV/dt) _c = 20 V/ μs | | $T_J = 125^\circ C$ | Min | 1 | A/ms |
| V_{CL} | $I_{CL} = 1$ mA, $t_p = 1$ ms | | $T_J = 25^\circ C$ | Typ | 1100 | V |

2 AC line switch basic application

The ACS120 device is well adapted to washing machine, dishwasher, tumble drier, refrigerator, air-conditioning systems, and cookware. It has been designed especially to switch on and off low power loads such as solenoid, valve, relay, dispenser, micro-motor, pump, fan and defrost heaters.

This AC switch is triggered by a negative gate current flowing out of the gate pin G. It can be driven directly by the digital MCU through a resistor as shown on the typical application diagram.

Thanks to its thermal and turn off commutation performance, the ACS120 switch can drive, with no additional turn off snubber, an inductive load up to 2 A.

Figure 14. Typical application diagram

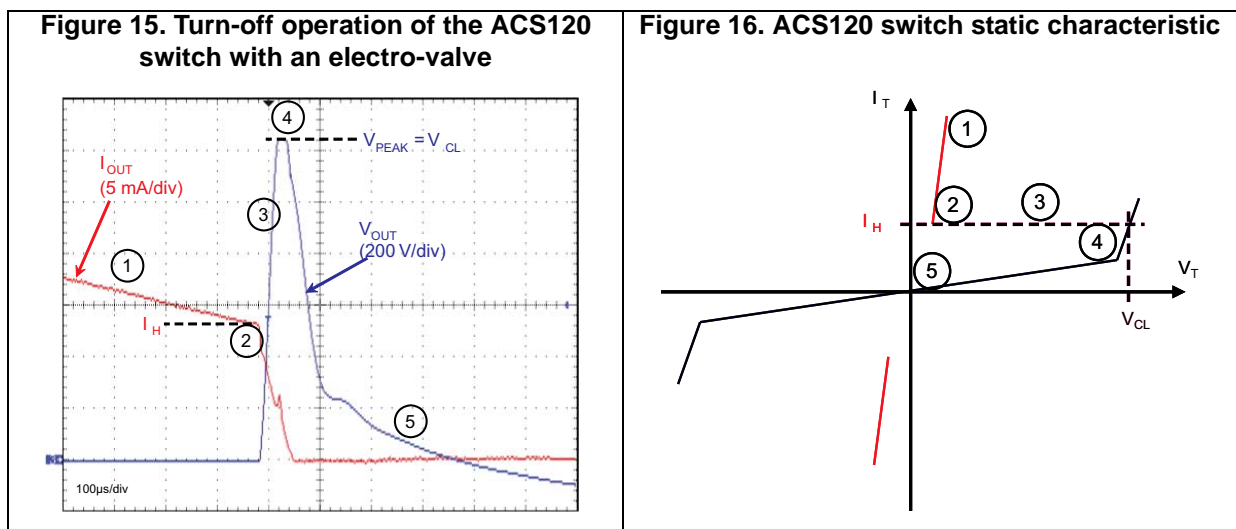

2.1 Protection against overvoltage: the best choice is ACS

In comparison with standard Triacs the ACS120 is over-voltage self-protected, as specified by the new parameter V_{CL} . This feature is useful in two operating conditions: in case of turn off of very inductive load, and in case of surge voltage that can occur on the electrical network.

2.2 High inductive load switch-off: turn-off overvoltage clamping

With high inductive and low RMS current loads the rate of decrease of the current is very low. An overvoltage can occur when the gate current is removed and the OUT current is lower than I_H .

As shown in [Figure 15](#) and [Figure 16](#), at the end of the last conduction half-cycle, the load current decreases (1). The load current reaches the holding current level I_H (2), and the ACS turns off (3). The water valve, as an inductive load (up to 15 H), reacts as a current generator and an overvoltage is created, which is clamped by the ACS (4). The current flows through the ACS avalanche and decreases linearly to zero. During this time, the voltage across the switch is limited to the clamping voltage V_{CL} . The energy stored in the inductance of the load is dissipated in the clamping section that is designed for this purpose. When the energy has been dissipated, the ACS voltage falls back to the mains voltage value (230 V rms, 50 Hz) (5).

Note: Same working principle described in item 2.2 is valid for both current directions.

2.3 Alternating current mains transient voltage ruggedness

The ACS120 switch is able to withstand safely the AC mains transients either by clamping the low energy spikes or by breaking-over when subjected to high energy shocks, even with high turn-on current rises. The test circuit shown in *Figure 17* is representative of the final ACS120 application, and is also used to test the AC switch according to the IEC 61000-4-5 standard conditions. Thanks to the load limiting the current, the ACS120 switch withstands the voltage spikes up to 2 kV above the peak mains voltage. The protection is based on an overvoltage crowbar technology. Actually, the ACS120 breaks over safely as shown in *Figure 18*. The ACS120 recovers its blocking voltage capability after the surge (switch-off back at the next zero crossing of the current). Such non-repetitive tests can be done 10 times on each AC mains voltage polarity.

Figure 17. Overvoltage ruggedness test circuit for resistive and inductive loads
