## Functional Diagram

## General Description

The HMC361G8 is a low noise  $N=2$  static divider in an 8 lead glass/metal surface mount (hermetic) package. This device operates from 10 MHz (with a square wave input) to 13 GHz input frequency with a single +5V DC supply. The low additive SSB phase noise of -148 dBc/Hz at 100 kHz offset helps the user maintain good system noise performance.

## Electrical Specifications, $T_A = +25^\circ \text{C}$ , 50 Ohm System, $V_{CC} = 5V$

[2] Circuit Board Material: Rogers 4350

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and backside ground slug should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request. This evaluation board is designed for single ended input testing. J2 and J3 provide differential output signals.

## Application Circuit

Capacitors C1, C2, C3, and C4 are broadband multilayer capacitors, American Technical Ceramics part number ATC530L. The 100 nF capacitance value is per ATC datasheet.
