1 Overview

Features

- Current controlled input
- Capable of driving all kind of loads (inductive, capacitive and resistive)
- Negative voltage clamped at output with inductive loads
- Current limitation
- Very low standby current
- Thermal shutdown with restart
- Overload protection
- Short circuit protection
- Overvoltage protection (including load dump)
- Reverse battery protection
- Loss of GND and loss of V_{bb} protection
- ESD-Protection
- Improved electromagnetic compatibility (EMC)
- Green Product (RoHS compliant)
- AEC Qualified

PG-SOT223-4

Description

The **BTS41k0S-ME-N** is a protected 1 Ω single channel Smart High-Side NMOS-Power Switch in a **PG-SOT223-4** package with charge pump and current controlled input, monolithically integrated in a smart power technology.

Product Summary

Overvoltage protection $V_{S(AZ)} = \text{min.}62\text{V}$
 Operating voltage range $4,9\text{V} < V_S < 45\text{V}$
 On-state resistance $R_{ON} \text{ typ } 1\Omega$
 Operating Temperature range $T_j = -40^\circ\text{C to } 150^\circ\text{C}$

Application

- All types of resistive, inductive and capacitive loads in automotive applications
- Current controlled power switch for 12V, 24V and 45V DC automotive and industrial applications
- Driver for electromagnetic relays
- Signal amplifier

4.1.10	ESD susceptibility (all other pins)	V _{ESD}	-5	5	kV	HBM ²⁾

1) Not subject to production test, specified by design

2) ESD susceptibility HBM according to EIA/JESD 22-A 114.

Note: Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Integrated protection functions are designed to prevent IC destruction under fault conditions described in the data sheet. Fault conditions are considered as "outside" the normal operating range. Protection functions are not designed for continuous or repetitive operation.

4.2 Functional Range

Pos.	Parameter	Symbol	Limit values		Unit	Conditions
			Min.	Max.		
4.2.1	Nominal Operating Voltage	V_S	4.9	45	V	V_S increasing
4.2.2	Standby Current	$I_{S(off)}$	2	10	uA	IN open

Note: Within the functional range the IC operates as described in the circuit description. The electrical characteristics are specified within the conditions given in the related electrical characteristics table.

4.3 Thermal Resistance

This thermal data was generated in accordance to JEDEC JESD51 standards.

7 Application Information

7.1 Application Diagram

The following information is given as a hint for the implementation of the device only and shall not be regarded as a description or warranty for a certain functionality, condition or quality of the device.

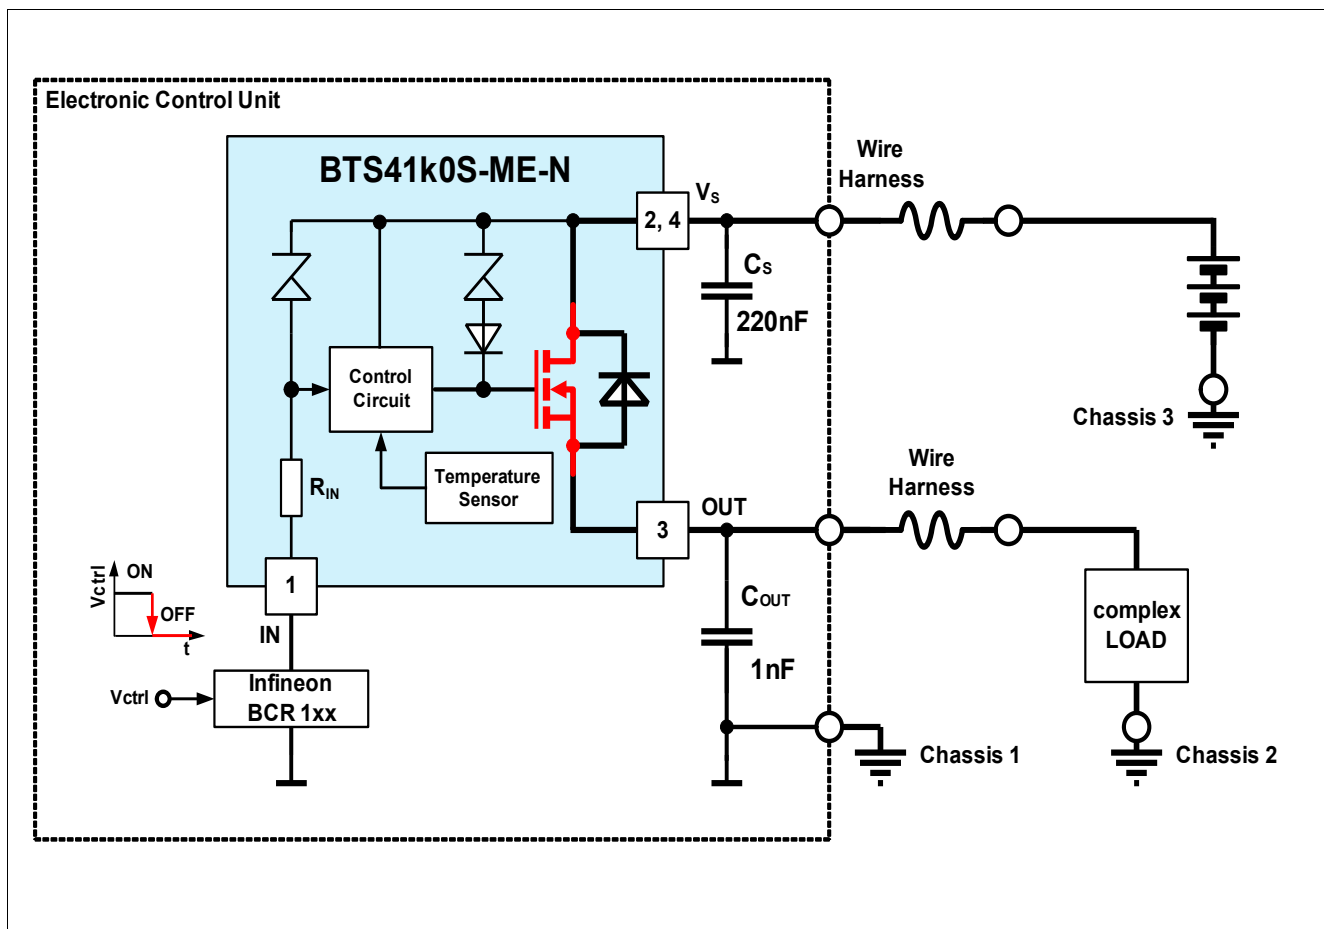

Figure 4 Application Diagram

The **BTS41k0S-ME-N** can be connected directly to the battery of a supply network. It is recommended to place a ceramic capacitor (e.g. $C_S = 220\text{nF}$) between supply and GND of the ECU to avoid line disturbances. Wire harness inductors/resistors are sketched in the application circuit above.

The complex load (resistive, capacitive or inductive) must be connected to the output pin OUT.

A built-in current limit protects the device against destruction.

The **BTS41k0S-ME-N** can be switched on and off with a low power levelshifter switch e.g. Infineon BCR1xx.

The IN pin must be pulled down to GND potential to switch the **BTS41k0S-ME-N** on. If no current is pulled down, the IN-node will float up to V_S potential by an internal pull up. In this mode the **BTS41k0S-ME-N** is deactivated with very low current consumption.

The output voltage slope is controlled during on and off transition to minimize emissions. Only a small CerCap $C_{OUT} = 1\text{nF}$ is recommended to attenuate RF noise.

In the following chapters the main features, some typical waveforms and the protection behaviour of the **BTS41k0S-ME-N** is shown. For further details please refer to application notes on the Infineon homepage.

8 Package outlines and footprint

Figure 8 PG-SOT223-4 (Plastic Dual Small Outline Package, RoHS-Compliant)

To meet the world-wide customer requirements for environmentally friendly products and to be compliant with government regulations the device is available as a green product. Green products are RoHS-Compliant (i.e Pb-free finish on leads and suitable for Pb-free soldering according to IPC/JEDEC J-STD-020)
