

QPA1022D

8.5 – 11 GHz 4 W GaN Power Amplifier

Product Overview

Qorvo's QPA1022D is a MMIC power amplifier fabricated on Qorvo's production 0.15 μm GaN on SiC process (QGaN15). Covering 8.5–11.0 GHz, the QPA1022D provides > 4 W of saturated output power and 24 dB of large-signal gain while achieving 45% power-added efficiency.

The QPA1022D is matched to 50 Ω with integrated DC blocking capacitors at RF output and DC grounded input port. It also has a built-in power detector for system RF power checking. With a compact dimension of 2.65 x 1.25 x 0.10 mm, it can support tight lattice spacing requirements for phased array radar applications. It is also an ideal component to support test instrumentation and commercial communication systems.

Assembly Notes

Component placement and adhesive attachment assembly notes:

- Vacuum pencils and/or vacuum collets are the preferred method of pick up.
- Air bridges must be avoided during placement.
- The force impact is critical during auto placement.

Reflow process assembly notes:

- Use AuSn (80/20) solder and limit exposure to temperatures above 300 °C to 3 – 4 minutes, maximum.
- An alloy station or conveyor furnace with reducing atmosphere should be used.
- Do not use any kind of flux.
- Coefficient of thermal expansion matching is critical for long-term reliability.
- Devices must be stored in a dry nitrogen atmosphere.

Interconnect process assembly notes:

- Thermosonic ball bonding is the preferred interconnect technique.
- Force, time, and ultrasonic are critical parameters.
- Aluminum wire should not be used.
- Devices with small pad sizes should be bonded with 0.0007-inch wire.
