

LTC3765/LTC3766

120W Isolated Forward Converter with Synchronous Rectification

DESCRIPTION

Demonstration circuit 1739B-C is a 120W isolated forward converter with synchronous rectification featuring the [LTC®3765/LTC3766](#) chip set.

This circuit was designed to demonstrate the high level of performance, efficiency, and small solution size attainable using this chip set in an active-clamp-reset forward converter power supply. It operates at 240kHz and produces a regulated 12V, 10A output from an input voltage range of 9V to 36V: suitable for telecom, industrial, and other applications. It has an eighth-brick footprint area. Synchrono-

nous rectification helps to attain efficiency exceeding 94%. Secondary-side control eliminates complex opto-coupler feedback, providing fast transient response with minimum output capacitance. For other output requirements, see the LTC3766 data sheet or contact the LTC factory.

Design files for this circuit board are available at <http://www.linear.com/demo>

PERFORMANCE SUMMARY

Specifications are at $T_A = 25^\circ\text{C}$

SYMBOL	PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
V_{IN}	Input Supply Range		9		36	V
V_{OUT}	Output Voltage			12.0		V
I_{OUT}	Output Current Range, Continuous	200LFM	0		10	A
f_{SW}	Switching (Clock) Frequency			240		kHz
$V_{OUT(P-P)}$	Output Ripple	$V_{IN} = 24V$, $I_{OUT} = 10A$ (20MHz BW)		40		mV _{P-P}
I_{REG}	Output Regulation	Line and Load ($9V_{IN}$ to $36V_{IN}$, $0A_{OUT}$ to $10A_{OUT}$)		± 0.27		%
P_{OUT}/P_{IN}	Efficiency (See Figure 3)	$V_{IN} = 24V$, $I_{OUT} = 10A$		92.7		%
	Isolation	Basic	1500			VDC
	Approximate Size	Component Area \times Top Component Height		$2.3 \times 0.9 \times 0.47$		Inches

OPERATING PRINCIPLES

The LTC3765 active clamp forward controller and gate driver is used on the primary and provides start-up, gate drive, and protection functions. Once start-up is accomplished, the LTC3766 high efficiency, secondary-side synchronous forward controller takes over, and provides the LTC3765 with timing information and bias power through a small pulse transformer.

When input voltage is applied, the LTC3765 commences soft-start of the output voltage. When the secondary bias source reaches the undervoltage threshold, the LTC3766 comes alive and takes control by sending encoded PWM gate pulses to the LTC3765 through T3. These pulses also provide primary bias power efficiently over a wide input voltage range.

The transition from primary to secondary control occurs at some fraction of the nominal output voltage. From then on, operation and design is simplified to that of a simple

buck converter. Secondary control eliminates delays, tames large-signal overshoot, and reduces output capacitance needed to meet transient response requirements.

An optional LC filter stage on the input lowers rms input current. The filter must have output impedance that is less than the converter input impedance to assure stability. This may require a damping impedance. (See Linear Technology Application Note 19 for a discussion of input filter stability.) A source with a 170m Ω or higher ESR at the filter resonant frequency (~35kHz) is one way of providing damping for the filter elements provided on the DC1739B-C. For bench testing, an electrolytic capacitor has been added at the input terminals to provide suitable damping and ripple current capability. The values selected have a filter resonant frequency that is below the converter switching frequency, thus avoiding high circulating currents in the filter.

QUICK START PROCEDURE

Demonstration circuit 1739B-C is easy to set up to evaluate the performance of the LTC3765/LTC3766. Refer to Figure 1 for proper measurement equipment setup and follow the procedure below:

Note: When measuring the output voltage ripple, care must be taken to avoid a long ground lead on the oscilloscope probe. Measure the output voltage ripple by touching the probe tip and ground ring directly across the last output capacitor as shown in Figure 1.

1. Set an input power supply that is capable of 9V to 36V to 9V. Then turn off the supply.
2. Direct an airflow of 200lfm across the unit for sustained operation at full load.
3. With power off, connect the supply to the input terminals +VIN and -VIN.
 - a. Input voltages lower than 9V can keep the converter from turning on due to the undervoltage lockout feature of the LTC3765 / LTC3766.

- b. If efficiency measurements are desired, an ammeter capable of measuring 10ADC or a resistor shunt can be put in series with the input supply in order to measure the DC1739B-C's input current.
- c. A voltmeter with a capability of measuring at least 36V can be placed across the input terminals in order to get an accurate input voltage measurement.

4. Turn on the power at the input.

Note: Make sure that the input voltage never exceeds 36V.

5. Check for the proper output voltage of 12V. Turn off the power at the input.
6. Once the proper output voltages are established, connect a variable load capable of sinking 10A at 12V to the output terminals +VOUT and -VOUT. Set the current for 0A.

QUICK START PROCEDURE

- If efficiency measurements are desired, an ammeter or a resistor shunt that is capable of handling 10ADC can be put in series with the output load in order to measure the DC1739B-C's output current.
- A voltmeter with a capability of measuring at least 12V can be placed across the output terminals in order to get an accurate output voltage measurement.

- Turn on the power at the input.

Note: If there is no output, temporarily disconnect the load to make sure that the load is not set too high.

- Once the proper output voltage is again established, adjust the load within the operating range and observe the output voltage regulation, ripple voltage, efficiency and other desired parameters.

DEMONSTRATION BOARD IMPORTANT NOTICE

Linear Technology Corporation (LTC) provides the enclosed product(s) under the following **AS IS** conditions:

This demonstration board (DEMO BOARD) kit being sold or provided by Linear Technology is intended for use for **ENGINEERING DEVELOPMENT OR EVALUATION PURPOSES ONLY** and is not provided by LTC for commercial use. As such, the DEMO BOARD herein may not be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including but not limited to product safety measures typically found in finished commercial goods. As a prototype, this product does not fall within the scope of the European Union directive on electromagnetic compatibility and therefore may or may not meet the technical requirements of the directive, or other regulations.

If this evaluation kit does not meet the specifications recited in the DEMO BOARD manual the kit may be returned within 30 days from the date of delivery for a full refund. THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY THE SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. EXCEPT TO THE EXTENT OF THIS INDEMNITY, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user releases LTC from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge. Also be aware that the products herein may not be regulatory compliant or agency certified (FCC, UL, CE, etc.).

No License is granted under any patent right or other intellectual property whatsoever. **LTC assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or any other intellectual property rights of any kind.**

LTC currently services a variety of customers for products around the world, and therefore this transaction **is not exclusive**.

Please read the DEMO BOARD manual prior to handling the product. Persons handling this product must have electronics training and observe good laboratory practice standards. **Common sense is encouraged.**

This notice contains important safety information about temperatures and voltages. For further safety concerns, please contact a LTC application engineer.
