

DATA SHEET

DME, DMF, DMJ Series: Silicon Beam-Lead Schottky Mixer Diode (Singles, Pairs, and Quads) Bondable Beam-Lead Devices

Applications

- Microwave Integrated Circuits
- Mixers
- Detectors

Features

- Low 1/f noise
- Low intermodulation distortion
- Statistical Process Control wafer fabrication

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green™*, document number SQ04-0074.

Description

Skyworks beam-lead silicon Schottky barrier mixer diodes are designed for applications through 40 GHz. The beam-lead design reduces the problem of bonding to the very small area characteristic of low capacitance junctions.

Beam-lead Schottky barrier mixer diodes are made by the deposition of a suitable barrier metal on an epitaxial silicon substrate to form the junction. The process and choice of materials result in low series resistance with a narrow spread of capacitance values for close impedance control.

A variety of forward voltages are available ranging from low values for low, or starved, local oscillator drive levels to high values for high drive, low distortion mixer applications. Capacitance ranges and series resistances are comparable with the beam-lead devices that are available up to, and including, the Ka-band. These diodes are well suited for use in Microwave Integrated Circuits (MICs).

Beam-lead Schottky barrier diodes are categorized by universal mixer applications in six frequency ranges: S, C, X, Ku, K, and Ka bands as noted in Table 1. They can also be used as modulators and high-speed switches.

Beam-lead diodes are suited for balanced mixers, due to their low parasitics and uniformity.

Table 1. Frequency Table

| Frequency Band | Frequency (GHz) |
|----------------|-----------------|
| S | 2 to 4 |
| C | 4 to 8 |
| X | 8.2 to 12.4 |
| Ku | 12.4 to 18.0 |
| K | 18.0 to 26.5 |
| Ka | 26.5 to 40.0 |

Electrical and Mechanical Specifications

The absolute maximum ratings of the DME, DMF, and DMJ series of Schottky mixer diodes are provided in Table 2. Electrical and physical specifications are provided in Tables 3 through 8.

Typical performance characteristics are shown in Figures 1 through 3. Typical mixer circuits are shown in Figure 4.

Table 2. Absolute Maximum Ratings (Note 1)

| Parameter | Symbol | Minimum | Typical | Maximum | Units |
|-------------------------------------|------------------|---------|---------|---------|-------------|
| Maximum current | I _{max} | | | 100 | mA |
| Power dissipation (continuous wave) | P _d | | | 75 | mW/junction |
| Storage temperature | T _{STG} | -65 | | +175 | °C |
| Operating temperature | T _A | -65 | | +175 | °C |

Note 1: Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

CAUTION: Although these devices are designed to be as robust as possible, electrostatic discharge (ESD) can damage them. These devices must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.

Table 3. Electrical Specifications: Beam-Lead Single N-Type Low, Medium, High Drive Schottky Diodes

| Part Number | Frequency Band | C _J @ 0 V, 1 MHz (pF) | Rs @ 5 mA (Ω) | V _B @ 10 μA (V) | V _F @ 1 mA (mV) | Drive Level | Outline Drawing |
