TAPERS

DETENT CONFIGURATIONS EXAMPLES - Stepped potentiometers.

This innovative product family has been specifically developed to allow the integration of otherwise large and expensive external mechanisms into the body of the majority of the 10 & 15 mm. PS/PSX/PSC/PT/PTC potentiometer series, thus allowing a high range of configurations: special tapers, tolerances, linearity, etc.

This detent design not only adds a "click" sensation of position, but also offers enormous savings in both cost and space for any given application.

Strong and weak detents can be mixed as per customer's request.

Detent number and positions can be made or fitted to the customer needs or preferences.

Relative detent (steps) positions along the total mechanical travel. Unless otherwise specified the detents are evenly spaced (using the end points as reference)

NOTES FOR DETENTED VERSIONS:

- Some configurations may have a longer leadtime.
- Standard mechanical life is 500 cycles.
- Long life versions are available under request and have the following characteristics at T₃:
 - Potentiometers with 1 to 3 detents: up to 10K cycles
 - Potentiometers with 4 and more detents: up to 5K cycles
- Detent torque can vary from 1.2 to 2.5 times the standard potentiometer torque.
- Please consult your nearest Piher supplier if unique non-overlapping values at each detent position or LOG/ALOG tapers are required.
- Different output voltage values can be matched at each detent position (under request).

PSC-10 with 10 detents and silver zones

upon request

Detents can be matched with constant value zones when required.
