

# High Reliability Hallogtic® Hall-Effect Sensors

OMH090, OMH3019, OMH3020, OMH3040, OMH3075, OMH3131 (B, S versions)

Ceramic Package

## Features:

- Designed for non-contact switching operations
- Operates over a broad range of supply voltages
- Excellent temperature stability operates in harsh environments
- Suitable for military and space applications
- Processing patterned after class B or S of MIL-STD-883
- Through Hole 0.40" [10.16 mm] lead length minimum
- ESD Rating of Class 3B per MIL-STD-883G, M3015.7, HB model.

## Description:

These Hall-effect devices contain a monolithic integrated circuit which incorporates a Hall element, a linear amplifier, a threshold amplifier, and Schmitt trigger on a single Hallogtic® silicon chip. Included on-chip is a band-gap voltage regulator that allows operation with a wide range of supply voltages. These devices feature logic level output and provide up to 21 mA of sink current. This allows direct driving of more than 7 TTL loads or any standard logic family using power supplies ranging from 4.5 to 24 volts. Output amplitude is constant at switching frequencies from DC to over 200 kHz.

The **Uni-Polar** turns on with a (logic level "0") after a sufficient magnetic field from the south pole of a magnet approaches the symbolized face of the device (operating point) and turns off (logic level "1") after the magnetic field reaches a minimum value. The **Bi-Polar** device turns on (logic level "0") in the presence of a magnetic south pole and turns off (logic level "1") when subjected to a magnetic north pole. Both magnetic poles are necessary for operation for Bi-Polar devices. This feature makes these sensors ideal for applications in non-contact switching operations, brushless DC motors and for use with multiple pole magnets.

B and S devices are processed to OPTEK's military screening program patterned after MIL-STD-883. This product has passed Radiation Hardness testing up to 350 Krad (si) per MIL-STD-883 method 1019.6 and up to 150 Krad (si) for ELDRS.

Contact your local representative or OPTEK for more information.

## Applications:

- Non-contact switching operations
- Brushless DC motors
- Multiple pole magnets

\* Add capacitor for stable operation

Lead finish = Solder Dipped (Sn 63/37)

# High Reliability Halloglic® Hall-Effect Sensors

OMH090, OMH3019, OMH3020, OMH3040,  
OMH3075, OMH3131 (B, S versions)

## Absolute Maximum Ratings ( $T_A = 25^\circ\text{C}$ unless otherwise noted)

|   |                      |
|---|----------------------|
| Supply Voltage, $V_{CC}$  | 25 V                 |
| Storage Temperature Range, $T_S$  | -65°C to +150°C      |
| Operating Temperature Range, $T_A$  | -55°C to +150°C      |
| Lead Soldering Temperature (1/8 in. (3.2 mm) from case for 5 seconds with soldering iron) | 260°C <sup>(1)</sup> |
| Output ON Current, $I_{SINK}$   | 25 mA                |
| Output OFF Voltage, $V_{OUT}$   | 25 V                 |
| Magnetic Flux Density, B  | Unlimited            |

### Notes:

(1) Heat sink leads during hand soldering.

| Issue | Change Description  | Approval         | Date     |
|-------|---|------------------|----------|
| A     | Initial Release   |                  | 02/05    |
| A.1   | Put into new template. Required changes on all pages. Added new .jpg logo. Updated data and graphs  |                  | 08/18/06 |
| B     | Updated graphs and Typical Op and Rel points for OMH3075  | Sergio DeLaGarza | 03/09/07 |
| B.1   | Added sentence to Description last paragraph on front page  | Sergio DeLaGarza | 06/06/07 |
| C     | Added SMD versions  | Sergio DeLaGarza | 05/21/08 |
| C.1   | Added Lead finish = Solder Dipped (Sn 63/37), added Rad Hard testing on page 1  | Sergio DeLaGarza | 07/31/08 |
| C.2   | Delete both SMD illustrations from cover page. Delete all –SM part numbers from table on page 2.  | Sergio DeLaGarza | 2/18/09  |
| C.3   | Change test conditions for tests $I_{CC}$ & $I_{OH}$ .  | Sergio DeLaGarza | 5/28/10  |
| C.4   | Change 100 Krad to 150 Krad. Update dimensions on through hole illustration.  | Sergio DeLaGarza | 6/3/10   |
| D     | Add 10 to Max for Supply Current at –55°C   | Sergio DeLaGarza | 9/20/10  |
| E     | Update schematic on page 1 and add “Add capacitor...” note.   | Sergio DeLaGarza | 11/9/10  |
| F     | Add ESD rating bullet to first page. Update limits for OMH090B,S, OMH3019B, S, OMH3020B, S & OMH3040B & S. Update the BH, BOP and BRP limits in the Electrical Characteristics charts.  | Sergio DeLaGarza | 12/22/10 |
| G     | Change 300 to 250 under Magnetic Hysteresis. Change - to 15 under TYP for BH on the Electrical Characteristics table for OMH3131, OMH3131B etc.   | Sergio DeLaGarza | 1/7/11   |
| H     | Move OMH3131B & S to the Uni-Polar section on the Part Number chart on page 2   | Sergio DeLaGarza | 11/8/11  |
| I     | Update package outline on page 1, $I_{CC}$ electrical test condition for OMH3075 & 3040   | Sergio DeLaGarza | 8/4/14   |
| J     | Delete the surface mount.....lead length feature from page 1.   | Sergio DeLaGarza | 11/2/15  |
| K     | Updated Supply Current Test Conditions pg 5—changed Output On, $B \leq 250$ to Output Off, $B \leq -250$ . And, Output Leakage Current from $B \leq 250$ to $B \leq -250$   | Mark Miller      | 05/17/16 |
| K-1   | Pg 2 changed Operate Point Gauss for OMH090B from 70/90/200 to 50/90/180; pg 3 changed $B_{OP}$ Min from 45, 70, 20 to 45, 50, 20 and Max from 210, 200, 180 to 210, 180, 180; pg 3 changed BRP Min from 30, 25 to 25, 30, 25 and Max from 180, 170 to 150, 180, 1400 and Test conditions changed “-55°C ^ + 25°C” to “-55°C”; pg 3 changed ICC Test conditions “+55°C, $V_{CC} = 24$ V, Output On, $B \leq 250$ Gauss” to “-55°C, $V_{CC} = 24$ V, Output On, $B \geq 250$ Gauss”; pg 5 changed ICC Test conditions from “+25°C, $V_{CC} = 24$ V, (Output Off), $B \leq -250$ Gauss” to “+25°C, $V_{CC} = 24$ V, (Output On), $B \geq -250$ Gauss” | Rodney Bailey    | 08/17/16 |
