EVAL BOARD USER'S MANUAL

Description

ON Semiconductor PYTHON Image Sensor Evaluation Kits enable customers to easily and quickly evaluate the performance of the PYTHON CMOS Image Sensors without the need to develop a full camera design. When combined with ON Semiconductor Sensor Studio II software, this hardware allows full control of the image sensor's register settings and enables video recording, still image capture, and image analysis. With this level of programmability, CMOS sensor functionality such as global shutter, very fast frame rate, high NIR sensitivity, and multiple regions of interest can be rapidly evaluated.
