The ISL28325 and ISL28345 are dual and quad general purpose amplifiers featuring low noise vs power consumption. The combination of low noise and small footprint provides the user with outstanding value and flexibility relative to similar competitive parts.

Applications for this amplifier include active filters, medical and analytical instrumentation, power supply controls, and industrial controls.

The ISL28325 is offered in 8 Ld SOIC and MSOP packages and the ISL28345 is offered in the 14 Ld SOIC package and operates over the -40°C to +125°C temperature range.

Features

- Input Offset Voltage . . . . . 1mV, Max.
- Input Bias Current . . . . . ±5nA, Max.
- Low Current Consumption 500µA
- Voltage Noise 9nV/Hz
- Wide Supply Range . . . . . 4.5V to 40V
- Operating Temperature Range . . . . . -40°C to +125°C
- Pb-Free (RoHS Compliant)

Applications

- Analytical Instrumentation
- Medical Instrumentation
- Spectral Analysis Equipment
- Active Filter Blocks
- Thermocouples and RTD Reference Buffers
- Data Acquisition
- Power Supply Control

NOTES:

1. Add "-T*" suffix for tape and reel. Please refer to TB347 for details on reel specifications.
2. These Intersil Pb-free plastic packaged products employ special Pb-free material sets, molding compounds/die attach materials, and 100% matte tin plate plus anneal (e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations). Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.
3. For Moisture Sensitivity Level (MSL), please see device information page for ISL28325, ISL28345. For more information on MSL please see techbrief TB363.

CAUTION: Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.

NOTES:

4. θ_{JA} is measured with the component mounted on a high effective thermal conductivity test board in free air. See Tech Brief TB379 for details.
5. For θ_{JC}, the "case temp" location is taken at the package top center.

Applications Information

Functional Description

The ISL28325 and ISL28345 are dual and quad general purpose amplifiers featuring low noise vs power consumption. They are offered in industry standard pinouts in 8 Ld SOIC, 8 Ld MSOP and 14 Ld SOIC packages. Applications for this amplifier include active filters, medical and analytical instrumentation, power supply controls, and industrial controls..

Operating Voltage Range

The devices are designed to operate over the 4.5V (±2.25V) to 40V (±20V) range over the -40°C to +125°C temperature range. For best amplifier performance, decouple the power supply with a 0.01µF or larger capacitors by placing them close to the supply pins of the amplifier.

Input ESD Diode Protection

The input terminals (IN+ and IN-) have internal ESD protection diodes to the positive and negative supply rails, series connected 500Ω current limiting resistors and an anti-parallel diode pair across the inputs.

The series resistors limit the high feed-through currents that can occur in pulse applications when the input dV/dT exceeds the 0.4V/µs slew rate of the amplifier. Without the series resistors, the input can forward-bias the anti-parallel diodes causing current to flow to the output resulting in severe distortion and possible diode failure.

In applications where one or both amplifier input terminals are at risk of exposure to high voltages beyond the power supply rails, current limiting resistors may be needed at the input terminal to limit the current through the power supply ESD diodes to 20mA max.
