### Description

The MAAM-010399 is an integrated 3 stage differential amplifier with embedded voltage variable attenuator. This part is intended as the output amplifier in a downstream Edge QAM RF modulator. The module provides excellent linearity and ACPR at output levels greater than 7 dB above Cable Labs DRFI requirements. The voltage variable attenuator (VVA) is implemented with PIN diodes to provide continuous power level control with high linearity and is controlled with a single voltage. The part is packaged in a 5 x 7 mm PQFN package.

## Absolute Maximum Ratings <sup>8,9,10</sup>

Parameter	Absolute Maximum
RF Input Power	-2 dBm
Voltage	9 volts
Operating Temperature	-40°C to +100°C
Junction Temperature <sup>11</sup>	+155°C
Storage Temperature	-65°C to +150°C

8. Exceeding any one or combination of these limits may cause permanent damage to this device.
9. MACOM does not recommend sustained operation near these survivability limits.
10. Operating at nominal conditions with  $T_J < 155^\circ\text{C}$  will ensure  $\text{MTTF} > 1 \times 10^6$  hours.
11. Junction Temperature ( $T_J$ ) =  $T_C + \Theta_{JC} * (V * I)$   
 Typical thermal resistance ( $\Theta_{JC}$ ) =  $14.9^\circ\text{C/W}$ .
- a) For  $T_C = 25^\circ\text{C}$ ,  
 $T_J = 63^\circ\text{C}$  @ 6 V, 420 mA (output stage)
- b) For  $T_C = 100^\circ\text{C}$ ,  
 $T_J = 138^\circ\text{C}$  @ 6 V, 420 mA (output stage)

## Handling Procedures

Please observe the following precautions to avoid damage:

## Static Sensitivity

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.
