

# LTM4607EV: High Density Buck-Boost Power Module

## DESCRIPTION

Demonstration circuit DC1198B-B features the LTM<sup>®</sup>4607EV, a high efficiency, high density switch mode buck-boost power module. The LTM4607EV can regulate its output voltage from input voltage both above and below the output. The board accepts an input voltage from 6V to 36V and is set for an output voltage of 12V. The rated load current is 5A in boost mode and 12A in step-down operation. Derating is necessary for certain  $V_{IN}$ ,  $V_{OUT}$  and thermal conditions. The switching frequency can be synchronized to external clock operating from 200kHz to

400kHz. This clock input can be used to reduce undesirable frequency harmonics and reduce input and output ripple when paralleling LTM4607 modules for even higher output current. The LTM4607 data sheet must be read in conjunction with this demo manual for working on or modifying the demo circuit DC1198B-B.

**Design files for this circuit board are available at <http://www.linear.com/demo>**

LT, LT, LTC, LTM,  $\mu$ Module, Linear Technology and the Linear logo are registered trademarks of Linear Technology Corporation. All other trademarks are the property of their respective owners.

## PERFORMANCE SUMMARY Specifications are at $T_A = 25^\circ\text{C}$

PARAMETER	CONDITION	VALUE
Input Voltage Range		6V to 36V
Output Voltage $V_{OUT}$	DC Voltage, $V_{IN} = 12\text{V}$ , $I_{OUT} = 5\text{A}$	12V, $\pm 2\%$
Maximum Continuous Output Current	Step-Up Step-Down Derating Is Necessary for Certain $V_{IN}$ , $V_{OUT}$ and Thermal Conditions	5A <sub>DC</sub> ( $6V_{IN}$ ) 12A <sub>DC</sub> ( $V_{IN} > 12\text{V}$ )
Default Operating Frequency		300kHz
Efficiency	$V_{IN} = 12\text{V}$ , $V_{OUT} = 12\text{V}$ , $I_{OUT} = 5\text{A}$	97.4%, See Figure 3 for More Information

# DEMO MANUAL DC1198B-B

## QUICK START PROCEDURE

Demonstration circuit DC1198B-B provides a simple way to evaluate the performance of the LTM4607EV. Please refer to Figure 1 for the proper measurement equipment set-up, and follow the procedure below:

1. Place jumpers in the following positions for a typical  $12V_{OUT}$  application:

RUN	CLOCK	MODE	START
On	Prog	CCM	SSO

2. With the power off, preset the load to 0A and the  $V_{IN}$  supply to less than 36V. Next, connect the input power supply, load and meters, as shown in Figure 1.
3. Turn on the power at the input. The output voltage should be  $12V, \pm 2\%$ .

4. Once the proper output voltage is established, adjust the load within the operating range and observe the output voltage regulation, ripple voltage, efficiency and other parameters. The cooling fan and lower current sensing resistor are necessary for  $V_{IN} < 6V$  and  $I_{OUT} = 5A$ .
5. To measure the input and output ripple, please refer to Figure 2 for the proper set-up.
6. The voltage at PLLFLTR determines the switching frequency. Modify R6 and R7 to adjust the switching frequency. Do not allow the voltage at pin PLLFLTR to exceed 2.4V.
7. Inductor and  $R_{SENSE}$  should be modified to accommodate certain input and output conditions. Please refer to Table 1 for recommended inductors.

## DEMONSTRATION BOARD IMPORTANT NOTICE

Linear Technology Corporation (LTC) provides the enclosed product(s) under the following **AS IS** conditions:

This demonstration board (DEMO BOARD) kit being sold or provided by Linear Technology is intended for use for **ENGINEERING DEVELOPMENT OR EVALUATION PURPOSES ONLY** and is not provided by LTC for commercial use. As such, the DEMO BOARD herein may not be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including but not limited to product safety measures typically found in finished commercial goods. As a prototype, this product does not fall within the scope of the European Union directive on electromagnetic compatibility and therefore may or may not meet the technical requirements of the directive, or other regulations.

If this evaluation kit does not meet the specifications recited in the DEMO BOARD manual the kit may be returned within 30 days from the date of delivery for a full refund. **THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY THE SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. EXCEPT TO THE EXTENT OF THIS INDEMNITY, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.**

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user releases LTC from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge. Also be aware that the products herein may not be regulatory compliant or agency certified (FCC, UL, CE, etc.).

No License is granted under any patent right or other intellectual property whatsoever. **LTC assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or any other intellectual property rights of any kind.**

LTC currently services a variety of customers for products around the world, and therefore this transaction **is not exclusive**.

**Please read the DEMO BOARD manual prior to handling the product.** Persons handling this product must have electronics training and observe good laboratory practice standards. **Common sense is encouraged.**

This notice contains important safety information about temperatures and voltages. For further safety concerns, please contact a LTC application engineer.
