## 2.5 V / 3.3 V 1:4 Differential Input to LVDS Fanout Buffer / Translator

### Description

The NB3L8504S is a differential 1:4 LVDS fanout buffer/translator with OE control for each differential output. The differential inputs which can be driven by either a differential or single-ended input, can accept various logic level standards such as LVPECL, LVDS, HSTL, HCSL and SSTL. These signals are then translated to four identical LVDS copies of the input up to 700 MHz. As such, the NB3L8504S is ideal for Clock distribution applications that require low skew.

The NB3L8504S is offered in the TSSOP-16 package.
