Applications Information

- ◇ Designed for the bi-directional protection of 2 lines from the damage caused by Electro Static Discharge (ESD) and surge pulses
- ◇ Be used on lines where the signal polarities are above and below ground
- ◇ Provides a surge capability of 350 Watts peak Ppp per line for an 8/20 ms waveform

Circuit Board Layout Recommendations

- ◇ Place the ESD Protection array as close to the input terminal or connector as possible
- ◇ Keep parallel signal paths to a minimum
- ◇ Minimize all printed-circuit board conductive loops including power and group loops
- ◇ Avoid using shared transient return paths to a common ground point
- ◇ Ground planes should be used. For multilayer printed-circuit boards, use ground vias
- ◇ Below picture is the typical application for bi-directional protection of two lines
