

8.2019

OLED 3.12" - 256x64 dots

Incl. controller SSD1322

Features

- 3.12" Low-Power OLED
- -40..+80°C (Top.)
- 256x64 dots
- Yellow display
- Incl. controller SSD1322
- SPI, 8-Bit Interface
- Fast response time (10µs) even at -40°C
- ZIFF connection
- 88x28mm outline dimensions

Ordering code

OLED 3.12" - 256x64 dots, yellow

EA W256064-XALG

Accessories

ZIFF connector 30 pins, 0.5mm pitch, top contact
USB-Testboard

EA WF050-30T
EA 9781-1USB

1. General Specification

| Item | Dimension | Unit |
|------------------|-------------------------|------|
| Dot Matrix | 256 x 64 Dots | — |
| Module dimension | 88.0 × 27.8 × 2.05 (mm) | mm |
| Active Area | 76.778×19.178 (mm) | mm |
| Pixel Size | 0.278×0.278 (mm) | mm |
| Pixel Pitch | 0.3×0.3 (mm) | mm |
| Display Mode | Passive Matrix | |
| Display Color | Yellow | |
| Drive Duty | 1/64 Duty | |
| IC | SSD1322 | |

2. Counter Drawing & Block Diagram

FUNCTION BLOCK DIAGRAM

3. Interface Pin Function

| Pin | Symbol | I/O | Function |
|---------------------|--------|-----|---|
| Power Supply | | | |
| 26 | VCI | P | Power Supply for Operation This is a voltage supply pin. It must be connected to external source & always be equal to or higher than VDD & VDDIO. |
| 25 | VDD | P | Power Supply for Core Logic Circuit This is a voltage supply pin. It can be supplied externally (within the range of 2.4~2.6V) or regulated internally from VCI. A capacitor should be connected between this pin & VSS under all circumstances. |
| 24 | VDDIO | P | Power Supply for I/O Pin This pin is a power supply pin of I/O buffer. It should be connected to VDD or external source. All I/O signal should have VIH reference to VDDIO. When I/O signal pins (BS0~BS1, D0~D7, control signals...) pull high, they should be connected to VDDIO. |
| 2 | VSS | P | Ground of Logic Circuit This is a ground pin. It also acts as a reference for the logic pins. It must be connected to external ground. |
| 3,29 | VCC | P | Power Supply for OLED Panel These are the most positive voltage supply pin of the chip. They must be connected to external source. |
| 5,28 | VLSS | P | Ground of Analog Circuit These are the analog ground pins. They should be connected to VSS externally. |
| Driver | | | |
| 22 | IREF | I | Current Reference for Brightness Adjustment This pin is segment current reference pin. A resistor should be connected between this pin and VSS. Set the current lower than 10uA. |
| 4 | VCOMH | P | Voltage Output High Level for COM Signal This pin is the input pin for the voltage output high level for COM signals. A tantalum capacitor should be connected between this pin and VSS. |
| 27 | VSL | P | Voltage Output Low Level for SEG Signal This is segment voltage reference pin. When external VSL is not used, this pin should be left open. When external VSL is used, this pin should connect with resistor and diode to ground. |

| Testing Pads | | | | | | | | | | | | | | | | | | |
|---------------------|-------|-----|--|--|-----|-----|------------|---|---|------------|---|---|---------------------|---|---|---------------------|---|---|
| 21 | FR | O | <p>Frame Frequency Triggering Signal</p> <p>This pin will send out a signal that could be used to identify the driver status. Nothing should be connected to this pin. It should be left open individually.</p> | | | | | | | | | | | | | | | |
| 16 | BS0 | I | <p>Communicating Protocol Select</p> <p>These pins are MCU interface selection input. See the following table:</p> <table border="1" style="margin-left: 20px;"> <thead> <tr> <th></th> <th>BS0</th> <th>BS1</th> </tr> </thead> <tbody> <tr> <td>3-wire SPI</td> <td>1</td> <td>0</td> </tr> <tr> <td>4-wire SPI</td> <td>0</td> <td>0</td> </tr> <tr> <td>8-bit 68XX Parallel</td> <td>1</td> <td>1</td> </tr> <tr> <td>8-bit 80XX Parallel</td> <td>0</td> <td>1</td> </tr> </tbody> </table> | | BS0 | BS1 | 3-wire SPI | 1 | 0 | 4-wire SPI | 0 | 0 | 8-bit 68XX Parallel | 1 | 1 | 8-bit 80XX Parallel | 0 | 1 |
| | BS0 | BS1 | | | | | | | | | | | | | | | | |
| 3-wire SPI | 1 | 0 | | | | | | | | | | | | | | | | |
| 4-wire SPI | 0 | 0 | | | | | | | | | | | | | | | | |
| 8-bit 68XX Parallel | 1 | 1 | | | | | | | | | | | | | | | | |
| 8-bit 80XX Parallel | 0 | 1 | | | | | | | | | | | | | | | | |
| 17 | BS1 | | | | | | | | | | | | | | | | | |
| 20 | RES# | I | <p>Power Reset for Controller and Driver</p> <p>This pin is reset signal input. When the pin is low, initialization of the chip is executed.</p> | | | | | | | | | | | | | | | |
| 19 | CS# | I | <p>Chip Select</p> <p>This pin is the chip select input. The chip is enabled for MCU communication only when CS# is pulled low.</p> | | | | | | | | | | | | | | | |
| 18 | D/C# | I | <p>Data/Command Control</p> <p>This pin is Data/Command control pin. When the pin is pulled high, the input at D7~D0 is treated as display data. When the pin is pulled low, the input at D7~D0 will be transferred to the command register. For detail relationship to MCU interface signals, please refer to the Timing Characteristics Diagrams.</p> | | | | | | | | | | | | | | | |
| 14 | E/RD# | I | <p>Read/Write Enable or Read</p> <p>This pin is MCU interface input. When interfacing to a 68XX-series microprocessor, this pin will be used as the Enable (E) signal. Read/write operation is initiated when this pin is pulled high and the CS# is pulled low. When connecting to an 80XX-microprocessor, this pin receives the Read (RD#) signal. Data read operation is initiated when this pin is pulled low and CS# is pulled low. When serial mode is selected, this pin must be connected to VSS.</p> | | | | | | | | | | | | | | | |
| 15 | R/W# | I | <p>Read/Write Select or Write</p> <p>This pin is MCU interface input. When interfacing to a 68XX-series microprocessor, this pin will be used as Read/Write (R/W#) selection input. Pull this pin to "High" for read mode and pull it to "Low" for write mode.</p> | | | | | | | | | | | | | | | |

| | | | |
|----------------|---------------|-----|---|
| | | | When 80XX interface mode is selected, this pin will be the Write (WR#) input. Data write operation is initiated when this pin is pulled low and the CS# is pulled low. When serial mode is selected, this pin must be connected to VSS. |
| 6~13 | D7~D0 | I/O | Host Data Input/Output Bus These pins are 8-bit bi-directional data bus to be connected to the microprocessor's data bus. When serial mode is selected, D1 will be the serial data input SDIN and D0 will be the serial clock input SCLK. Unused pins must be connected to VSS except for D2 in serial mode. |
| Reserve | | | |
| 23 | N.C. | - | Reserved Pin The N.C. pin between function pins are reserved for compatible and flexible design. |
| 1,30 | N.C. (GND) | - | Reserved Pin (Supporting Pin) The supporting pins can reduce the influences from stresses on the function pins. These pins must be connected to external ground. |

4. Absolute Maximum Ratings

| Parameter | Symbol | Min | Max | Unit | Notes |
|------------------------------|--------|------|------|------|-------|
| Supply Voltage for Operation | VCI | -0.3 | 4 | V | 1, 2 |
| Supply Voltage for Logic | VDD | -0.5 | 2.75 | V | 1, 2 |
| Supply Voltage for I/O Pins | VDDIO | -0.5 | VCI | V | 1, 2 |
| Supply Voltage for Display | VCC | -0.5 | 20 | V | 1, 2 |
| Operating Temperature | TOP | -40 | 80 | °C | - |
| Storage Temperature | TSTG | -40 | 80 | °C | - |

Note 1: All the above voltages are on the basis of “VSS = 0V”.

Note 2: When this module is used beyond the above absolute maximum ratings, permanent breakage of the module may occur. Also, for normal operations, it is desirable to use this module under the conditions according to Section 6 “Electrical Characteristics”. If this module is used beyond these conditions, malfunctioning of the module can occur and the reliability of the module may deteriorate

5. Electrical Characteristics

| Item | Symbol | Condition | Min | Typ | Max | Unit |
|-----------------------------------|--------|------------|-----------------------|------|-----------------------|------|
| Supply Voltage for Operation | VCI | Note | 2.8 | 3.0 | 3.3 | V |
| Supply Voltage for Display | VCC | — | 14 | 14.5 | 15 | V |
| High Level Input | VIH | — | $0.8 \times V_{DDIO}$ | — | V_{DDIO} | V |
| Low Level Input | VIL | — | 0 | — | $0.2 \times V_{DDIO}$ | V |
| High Level Output | VOH | — | $0.9 \times V_{DDIO}$ | — | V_{DDIO} | V |
| Low Level Output | VOL | — | 0 | — | $0.1 \times V_{DDIO}$ | V |
| 50% Check Board operating Current | | VCC =14.5V | 23 | 25 | 32 | mA |

Note: Supply Voltage for Logic = VDD core power supply can be regulated from VCI.

6. Optical Characteristics

| Item | Symbol | Condition | Min | Typ | Max | Unit |
|---|--------------|-----------|--------|------|------|-------------------|
| View Angle | (V) θ | | 160 | | | deg |
| | (H) ϕ | | 160 | | | deg |
| Contrast Ratio | CR | Dark | 2000:1 | | — | — |
| Response Time | T rise | — | | 10 | | μ s |
| | T fall | — | | 10 | | μ s |
| Display with 50% check Board Brightness | | | 100 | 120 | | cd/m ² |
| CIEx(Yellow) | | (CIE1931) | 0.45 | 0.47 | 0.49 | |
| CIEy(Yellow) | | (CIE1931) | 0.48 | 0.50 | 0.52 | |

7. OLED Lifetime

| ITEM | Conditions | Min | Typ | Remark |
|---------------------|--|------------|------------|--------|
| Operating Life Time | Ta=25°C / Initial 50% check board brightness Typical Value | 30,000 Hrs | 50,000 Hrs | Note |

Notes:

- Life time is defined the amount of time when the luminance has decayed to <50% of the initial value.
- This analysis method uses life data obtained under accelerated conditions to extrapolate an estimated probability density function (*pdf*) for the product under normal use conditions.
- Screen saving mode will extend OLED lifetime.

8. Reliability

| Environmental Test | | | |
|------------------------------------|--|--|---------------------|
| Test Item | Content of Test | Test Condition | Applicable Standard |
| High Temperature storage | Endurance test applying the high storage temperature for a long time. | 80□ 240hrs | — |
| Low Temperature storage | Endurance test applying the low storage temperature for a long time. | -40□ 240hrs | — |
| High Temperature Operation | Endurance test applying the electric stress (Voltage & Current) and the thermal stress to the element for a long time. | 80□ 240hrs | — |
| Low Temperature Operation | Endurance test applying the electric stress under low temperature for a long time. | -40□ 240hrs | — |
| High Temperature/ Humidity Storage | Endurance test applying the high temperature and high humidity storage for a long time. | 60□,90%RH 240hrs | — |
| Temperature Cycle | Endurance test applying the low and high temperature cycle.  | -40□/80□ 100 cycles | — |
| Mechanical Test | | | |
| Vibration test | Endurance test applying the vibration during transportation and using. | 10~22Hz→1.5mmp-p 22~500Hz→1.5G Total 0.5hr | — |
| Shock test | Constructional and mechanical endurance test applying the shock during transportation. | 50G Half sin wave 11 ms 3 times of each direction | — |
| Atmospheric pressure test | Endurance test applying the atmospheric pressure during transportation by air. | 115mbar 40hrs | — |
| Others | | | |
| Static electricity test | Endurance test applying the electric stress to the terminal. | VS=800V,RS=1.5kΩ CS=100pF 1 time | — |

*** Supply voltage for OLED system =Operating voltage at 25°C

Test and measurement conditions

1. All measurements shall not be started until the specimens attain to temperature stability. After the completion of the described reliability test, the samples were left at room temperature for 2 hrs prior to conducting the failure test at $23\pm 5^{\circ}\text{C}$; $55\pm 15\%$ RH.
2. All-pixels-on is used as operation test pattern.
3. The degradation of Polarizer are ignored for High Temperature storage, High Temperature/ Humidity Storage, Temperature Cycle

Evaluation criteria

1. The function test is OK.
2. No observable defects.
3. Luminance: $> 50\%$ of initial value.
4. Current consumption: within $\pm 50\%$ of initial value.

APPENDIX:

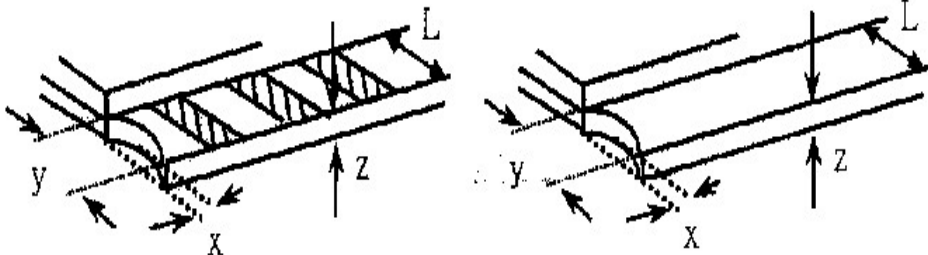

RESIDUE IMAGE

Because the pixels are lighted in different time, the luminance of active pixels may reduce or differ from inactive pixels. Therefore, the residue image will occur. To avoid the residue image, every pixel needs to be lighted up uniformly.

9. Inspection specification

| NO | Item | Criterion | AQL | | | | | | | | | | | | | | | |
|-------------------------|--|--|-------------|----------------|------------------|-----------------|-------------------------|-----------------|-------------------------|----------------------|---------------|--------------|----------------------|---|-----|------------|---------------|-----|
| 01 | Electrical Testing | 1.1 Missing vertical, horizontal segment, segment contrast defect. 1.2 Missing character , dot or icon. 1.3 Display malfunction. 1.4 No function or no display. 1.5 Current consumption exceeds product specifications. 1.6 OLED viewing angle defect. 1.7 Mixed product types. 1.8 Contrast defect. | 0.65 | | | | | | | | | | | | | | | |
| 02 | Black or white spots on OLED | 2.1 White and black spots on display $\square 0.25\text{mm}$, no more than three white or black spots present. 2.2 Densely spaced: No more than two spots or lines within 3mm. | 2.5 | | | | | | | | | | | | | | | |
| 03 | OLED black spots, white spots, contamination (non-display) | 3.1 Round type : As following drawing $\Phi = (x + y) / 2$  | 2.5 | | | | | | | | | | | | | | | |
| | | <table border="1"> <thead> <tr> <th>SIZE</th> <th>Acceptable QTY</th> </tr> </thead> <tbody> <tr> <td>$\Phi \leq 0.10$</td> <td>Accept no dense</td> </tr> <tr> <td>$0.10 < \Phi \leq 0.20$</td> <td>2</td> </tr> <tr> <td>$0.20 < \Phi \leq 0.25$</td> <td>1</td> </tr> <tr> <td>$0.25 < \Phi$</td> <td>0</td> </tr> </tbody> </table> | SIZE | Acceptable QTY | $\Phi \leq 0.10$ | Accept no dense | $0.10 < \Phi \leq 0.20$ | 2 | $0.20 < \Phi \leq 0.25$ | 1 | $0.25 < \Phi$ | 0 | | | | | | |

10. Precautions in use of OLED Modules

Modules

- (1) Avoid applying excessive shocks to module or making any alterations or modifications to it.
- (2) Don't make extra holes on the printed circuit board, modify its shape or change the components of OLED display module.
- (3) Don't disassemble the OLED display module.
- (4) Don't operate it above the absolute maximum rating.
- (5) Don't drop, bend or twist OLED display module.
- (6) Soldering: only to the I/O terminals.
- (7) Storage: please storage in anti-static electricity container and clean environment.
- (8) It's pretty common to use "Screen Saver" to extend the lifetime and Don't use fix information for long time in real application.
- (9) Don't use fixed information in OLED panel for long time, that will extend "screen burn" effect time..
- (10) ELECTRONIC ASSEMBLY has the right to change the passive components, including R2 and R3 adjust resistors. (Resistors, capacitors and other passive components will have different appearance and color caused by the different supplier.)
- (11) ELECTRONIC ASSEMBLY have the right to change the PCB Rev. (In order to satisfy the supplying stability, management optimization and the best product performance...etc, under the premise of not affecting the electrical characteristics and external dimensions, ELECTRONIC ASSEMBLY have the right to modify the version.)

10.1. Handling Precautions

- (1) Since the display panel is being made of glass, do not apply mechanical impacts such as dropping from a high position.
- (2) If the display panel is broken by some accident and the internal organic substance leaks out, be careful not to inhale nor lick the organic substance.
- (3) If pressure is applied to the display surface or its neighborhood of the OLED display module, the cell structure may be damaged and be careful not to apply pressure to these sections.
- (4) The polarizer covering the surface of the OLED display module is soft and easily scratched. Please be careful when handling the OLED display module.
- (5) When the surface of the polarizer of the OLED display module has soil, clean the surface. It takes advantage of by using following adhesion tape.
 - * Scotch Mending Tape No. 810 or an equivalentNever try to breathe upon the soiled surface nor wipe the surface using cloth containing solvent such as ethyl alcohol, since the surface of the polarizer will become cloudy. Also, pay attention that the following liquid and solvent may spoil the polarizer:
 - * Water
 - * Ketone
 - * Aromatic Solvents
- (6) Hold OLED display module very carefully when placing OLED display module into the

System housing. Do not apply excessive stress or pressure to OLED display module. And, do not over bend the film with electrode pattern layouts. These stresses will influence the display performance. Also, secure sufficient rigidity for the outer cases.

(7) Do not apply stress to the LSI chips and the surrounding molded sections.

(8) Do not disassemble nor modify the OLED display module.

(9) Do not apply input signals while the logic power is off.

(10) Pay sufficient attention to the working environments when handing OLED display modules to prevent occurrence of element breakage accidents by static electricity.

* Be sure to make human body grounding when handling OLED display modules.

* Be sure to ground tools to use or assembly such as soldering irons.

* To suppress generation of static electricity, avoid carrying out assembly work under dry environments.

* Protective film is being applied to the surface of the display panel of the OLED display module. Be careful since static electricity may be generated when exfoliating the protective film.

(11) Protection film is being applied to the surface of the display panel and removes the protection film before assembling it. At this time, if the OLED display module has been stored for a long period of time, residue adhesive material of the protection film may remain on the surface of the display panel after removed of the film. In such case, remove the residue material by the method introduced in the above Section 5.

(12) If electric current is applied when the OLED display module is being dewed or when it is placed under high humidity environments, the electrodes may be corroded and be careful to avoid the above.

10.2. Storage Precautions

(1) When storing OLED display modules, put them in static electricity preventive bags avoiding exposure to direct sun light nor to lights of fluorescent lamps. and, also, avoiding high temperature and high humidity environment or low temperature (less than 0°C) environments.

(We recommend you to store these modules in the packaged state when they were shipped from ELECTRONIC ASSEMBLY Technology Inc.

At that time, be careful not to let water drops adhere to the packages or bags nor let dewing occur with them.

(2) If electric current is applied when water drops are adhering to the surface of the OLED

display module, when the OLED display module is being dewed or when it is placed under high humidity environments, the electrodes may be corroded and be careful about the above.

10.3. Designing Precautions

- (1) The absolute maximum ratings are the ratings which cannot be exceeded for OLED display module, and if these values are exceeded, panel damage may be happen.
- (2) To prevent occurrence of malfunctioning by noise, pay attention to satisfy the VIL and VIH specifications and, at the same time, to make the signal line cable as short as possible.
- (3) We recommend you to install excess current preventive unit (fuses, etc.) to the power circuit (VDD). (Recommend value: 0.5A)
- (4) Pay sufficient attention to avoid occurrence of mutual noise interference with the neighboring devices.
- (5) As for EMI, take necessary measures on the equipment side basically.
- (6) When fastening the OLED display module, fasten the external plastic housing section.
- (7) If power supply to the OLED display module is forcibly shut down by such errors as taking out the main battery while the OLED display panel is in operation, we cannot guarantee the quality of this OLED display module.

* Connection (contact) to any other potential than the above may lead to rupture of the IC.11.4.

Precautions when disposing of the OLED display modules

- 1) Request the qualified companies to handle industrial wastes when disposing of the OLED display modules. Or, when burning them, be sure to observe the environmental and hygienic laws and regulations.

10.4. Other Precautions

- (1) When an OLED display module is operated for a long of time with fixed pattern may remain as an after image or slight contrast deviation may occur.
Nonetheless, if the operation is interrupted and left unused for a while, normal state can be restored. Also, there will be no problem in the reliability of the module.
- (2) To protect OLED display modules from performance drops by static electricity rapture, etc., do not touch the following sections whenever possible while handling the OLED display modules.
 - * Pins and electrodes
 - * Pattern layouts such as the TCP & FPC
- (3) With this OLED display module, the OLED driver is being exposed. Generally speaking, semiconductor elements change their characteristics when light is radiated according to the principle of the solar battery. Consequently, if this OLED driver is exposed to light, malfunctioning may occur.
 - * Design the product and installation method so that the OLED driver may be shielded from light in actual usage.
 - * Design the product and installation method so that the OLED driver may be shielded from light during the inspection processes.
- (4) Although this OLED display module stores the operation state data by the commands and the indication data, when excessive external noise, etc. enters into the module, the internal status

may be changed. It therefore is necessary to take appropriate measures to suppress noise generation or to protect from influences of noise on the system design.

- (5) We recommend you to construct its software to make periodical refreshment of the operation statuses (re-setting of the commands and re-transference of the display data) to cope with catastrophic noise.
- (6) Resistors, capacitors and other passive components will have different appearance and color caused by the different supplier.
- (7) Our company will has the right to upgrade and modify the product function.

11. Initialization example

```

/*****
Global variables
*****/

uint8_t buf[20];           //SPI command buffer
