### Functional Diagram

### General Description

The HMC465LP5(E) is a GaAs MMIC PHEMT Distributed Driver Amplifier packaged in leadless 5x5 mm surface mount package which operate between DC and 20 GHz. The amplifier provides 15 dB of gain, 3 dB noise figure and +25 dBm of saturated output power while requiring only 160 mA from a +8V supply. Gain flatness is excellent at ±0.5 dB as well as ±4 deg deviation from linear phase from DC - 10 GHz making the HMC465LP5(E) ideal for OC192 fiber optic LN/MZ modulator driver amplifiers as well as test equipment applications. The HMC465LP5(E) amplifiers I/Os are internally matched to 50 Ohms.

The circuit board used in the final application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and package bottom should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation board should be mounted to an appropriate heat sink. The evaluation circuit board shown is available from Analog Devices, upon request.

**GAAS PHEMT MMIC MODULATOR DRIVER  
AMPLIFIER, DC - 20 GHz****Device Operation**

These devices are susceptible to damage from Electrostatic Discharge. Proper precautions should be observed during handling, assembly and test.

The input to this device should be AC-coupled. To provide the typical 8Vp-p output voltage swing, a 1.2Vp-p AC-coupled input voltage swing is required.

**Device Power Up Instructions**

1. Ground the device
  2. Set V<sub>gg</sub> to -2V (no drain current)
  3. Set V<sub>ctl</sub> to +1V (no drain current)
  4. Set V<sub>dd</sub> to +5V (no drain current)
  5. Adjust V<sub>gg</sub> for I<sub>dd</sub> = 140mA
- V<sub>gg</sub> may be varied between -1V and 0V to provide the desired eye crossing point percentage (i.e. 50% crosspoint) and a limited cross point control capability.
  - V<sub>dd</sub> may be increased to +8V if required to achieve greater output voltage swing.
  - V<sub>ctl</sub> may be adjusted between +2V and +0V to vary the output voltage swing.

**Device Power Down Instructions**

1. Reverse the sequence identified above in steps 1 through 4.
