## General Description

Apacer **75.963AT.G020C** is 64M x 64 Double Data Rate SDRAM high density memory modules based on first generation of 512Mb DDR SDRAM respectively.

It consists of 8 pieces 64M x8 bit with 4banks Double Data Rate SDRAMs in 66pin TSOP-II (400mil) packages mounted on a 200pin glass-epoxy substrate. Decoupling capacitors are mounted on the printed circuit board in parallel for each DDR SDRAM. This product is Dual In-line Memory Modules and intended for mounting into 200 pin edge connector sockets.

Synchronous design allows precise cycle control with the use of system clock. Data I/O transactions are possible on both edges of DQS. Range of operating frequencies, programmable latencies and burst lengths allow the same device to be useful for a variety of high bandwidth, high performance memory system applications.

## Ordering Information

| Part Number    | Bandwidth  | Speed Grade | Max Frequency | CAS Latency |
|----------------|------------|-------------|---------------|-------------|
| 75.963AT.G020C | 3.2 GB/sec | 400 Mbps    | 200 MHz       | CL3         |

| Density | Organization | Component | Rank |
|---------|--------------|-----------|------|
| 512MB   | 64M x 64     | 64M x8*8  | 1    |

## Key Parameters

| MT/s        | DDR-266 | DDR-266 | DDR-333 | DDR-400 | Unit |
|-------------|---------|---------|---------|---------|------|
| Grade       | -CL2    | -CL2.5  | -CL2.5  | -CL3    |      |
| tCK (min)   | 7.5     | 7.5     | 6       | 5       | ns   |
| CAS latency | 2       | 2.5     | 2.5     | 3       | tCK  |
| tRC         | 9       | 9       | 10      | 11      | tCK  |
| tRAS        | 6       | 6       | 7       | 8       | tCK  |
| CL-tRCD-tRP | 2-3-3   | 2.5-3-3 | 2.5-3-3 | 3-3-3   | tCK  |

## Specifications:

- ◆ Power supply  $V_{DD}$ : 2.6V +/-0.1V
- ◆ MRS cycle with address key programs
- ◆ CAS Latency (Access from column address): 2.5, 3
- ◆ Burst length : 2, 4, 8
- ◆ Data scramble ;Sequential & Interleave
- ◆ Serial presence detect with EEPROM
- ◆ SSTL-2 interface
- ◆ Differential clock input
- ◆ Compliance With RoHS
- ◆ Compliance With CE
- ◆ Auto Refresh and self Refresh Modes 64ms, 8192-cycle refresh
- ◆ Operating Temperature Rang : Industrial  $-40^{\circ}\text{C} \leq TA \leq 85^{\circ}\text{C}$

## Pin Assignments

| VREF                    | SDRAM I/O reference supply                             |
| VSS                     | Power supply return(ground)                            |
| VDDSPD                  | Serial EEPROM positive power supply                    |
| VDDID                   | VDD identification flag                                |
| NC                      | Spare pins(no connect)                                 |

# Functional Block Diagram

#Unless otherwise noted, resistor values are  $22 \Omega \pm 5\%$

Note: DQ wiring may differ from that described in this drawing; however DQ/DM/DQS relationships are maintained as shown.  
**V<sub>DD</sub>ID strap connections:**  
 (for memory device V<sub>DD</sub>, V<sub>DDQ</sub>)  
 Strap out (open): V<sub>DD</sub> = V<sub>DDQ</sub>  
 Strap in (closed): V<sub>DD</sub> ≠ V<sub>DDQ</sub>

## Absolute Maximum Ratings

| Parameter                               | Symbol                             | Description     | Units |
|---|------------------------------------|-----------------|-------|
| Supply Voltage Relative to VSS          | V <sub>DD</sub>                    | - 1.0 V ~ 3.6 V | V     |
| Supply Voltage Relative to VSS          | V <sub>DDQ</sub>                   | - 1.0 V ~ 3.6 V | V     |
| VREF and Inputs Voltage Relative to VSS | V <sub>IN</sub> , V <sub>OUT</sub> | - 0.5 V ~ 3.6 V | V     |
| Storage Temperature                     | TSTG                               | -55 to +100     | °C    |

Notes:

Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage of the device.

Exposure to absolute maximum rating conditions for extended periods may affect device reliability. .

## DRAM Component Operating Temperature Range

| Symbol | Parameter                              | Rating    | Units | Notes |
|--------|--|-----------|-------|-------|
| TA     | Operating Temperature Rang: Industrial | -40 to 85 | °C    |       |

# Operating Conditions

## Recommended DC Operating Conditions - DDR (2.6V ± 0.1V) operation

| Symbol           | Parameter                 | Rating |      |      | Units |
|------------------|---------------------------|--------|------|------|-------|
|                  |                           | Min.   | Typ. | Max. |       |
| V <sub>DD</sub>  | Supply Voltage            | 2.5    | 2.6  | 2.7  | V     |
| V <sub>DDQ</sub> | Supply Voltage for Output | 2.5    | 2.6  | 2.7  | V     |

### Notes:

1. V<sub>REF</sub> is expected to be equal to 0.5 x V<sub>DDQ</sub> of the transmitting device, and to track variations in the DC level of the same. Peak-to-peak noise on V<sub>REF</sub> may not exceed 2% of the DC value
2. V<sub>TT</sub> is not applied directly to the device. V<sub>TT</sub> is a system supply for signal termination resistors, is expected to be set equal to V<sub>REF</sub>, and must track variations in the DC level of V<sub>REF</sub>
3. V<sub>ID</sub> is the magnitude of the difference between the input level on CK and the input level on /CK.

# Mechanical Drawing

TOLERANCES ON ALL DIMENSIONS  $\pm 0.13$  UNLESS OTHERWISE SPECIFIED.
