Acronyms in This Document

A list of acronyms used in this document.

Acronym	Definition
DVI	Digital Visual Interface
GPIO	General Purpose Input/Output
HDCP	High-Definition Content Protection
HDMI	High Definition Multimedia Interface
I ² C	Inter-Integrated Circuit
LDO	Low Dropout
TMDS	Transition-Minimized Differential Signaling
VIP	Video Interface Platform

1. Introduction

This document describes the Lattice Semiconductor HDMI® VIP Input Bridge Board. This board is designed to work with the Lattice Video Interface Platform board interconnect system. The key component of this board is the Lattice Semiconductor Si1127A HDMI Deep Color Receiver.

The contents of this user guide include descriptions of board components, schematics, and bill of materials.

1.1. Features

Key features of the HDMI VIP input bridge board include:

- Si1127A HDMI Deep Color Receiver
 - Supports Deep Color video resolution up to 12-bit, 1080p at 60 Hz
 - Video Input:
 - Two HDMI/DVI-compatible ports
 - The TMDS™ core runs at 25 MHz – 225 MHz
 - Dynamic cable equalization automatically detects the equalization required for the incoming signal
 - Video Output:
 - xvYCC to extended RGB
 - 36-bit RGB/YCbCr 4:4:4
 - 16/20/24-bit YCbCr 4:2:2
 - 8/10/12-bit YCbCr 4:2:2 (ITU BT.656)
 - No HDCP support
- Two Single-Link 19-pin HDMI Type-A connectors
- Two 60 pin Rugged High-Speed Headers

Figure 1.1 shows the top view of the HDMI VIP input bridge board and its key components. Figure 1.2 on page 5 shows the bottom view of the board.

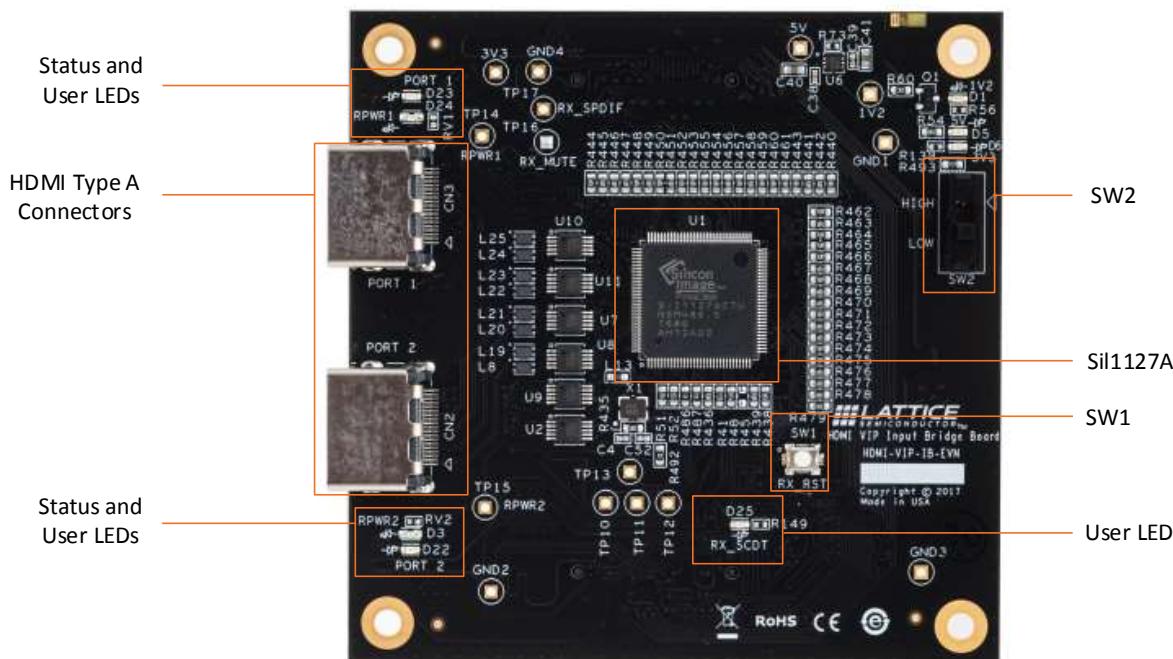

Figure 1.1. Top Side of HDMI VIP Input Bridge Board

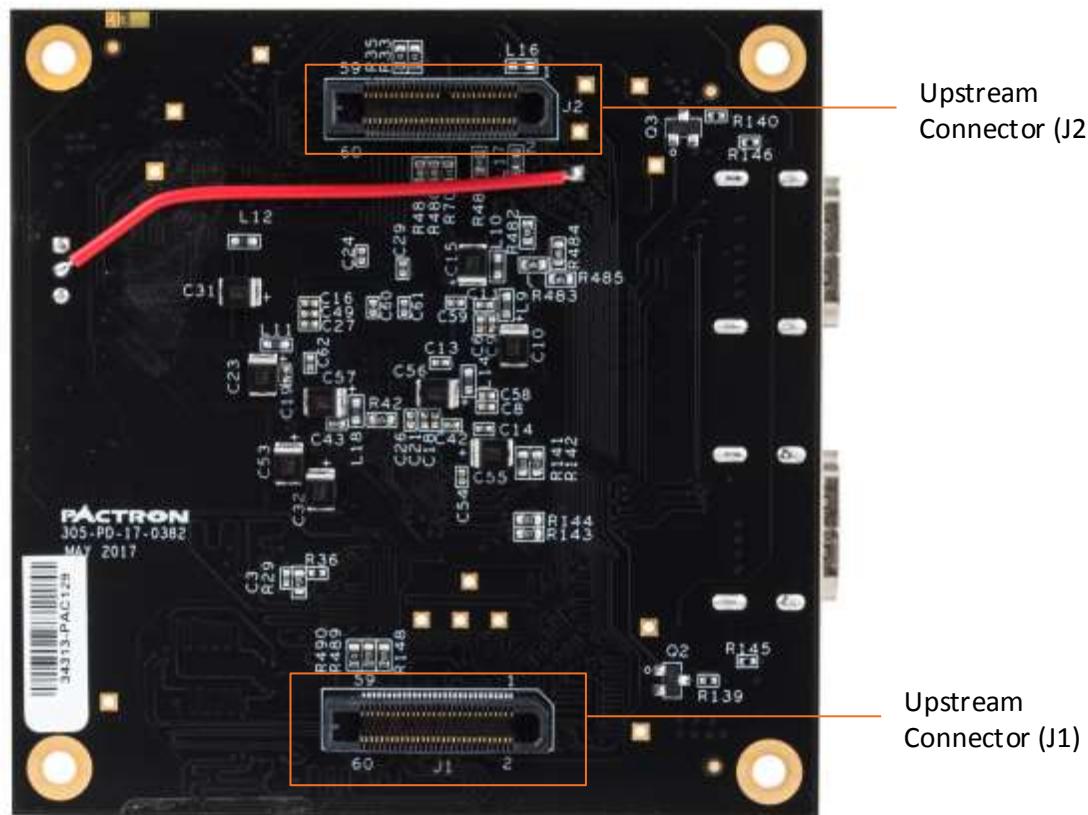

Figure 1.2. Bottom Side of HDMI VIP Input Bridge Board

1.2. Further Information

For more information on boards and kits available for the VIP system, visit <http://www.latticesemi.com/boards>.

For details about the Si1127A device, refer to [Si19127A/Si1127A HDMI Receiver with Deep Color Output Data Sheet \(SiL-DS-1059\)](#).

Refer to [Appendix A](#) and [Appendix B](#) for the schematics and BOM of the HDMI VIP Input Bridge board.

2. Functional Description

The Si1127A device receives up to 1080p @ 60 Hz HDMI-compliant digital audio and video from either HDMI Type A Connector Port 1 or Port 2 and transmits RGB or YCbCr parallel video and I²S or SPDIF audio to connectors J1 and J2. The Si1127A device does not support HDCP decryption, therefore can only receive unencrypted video.

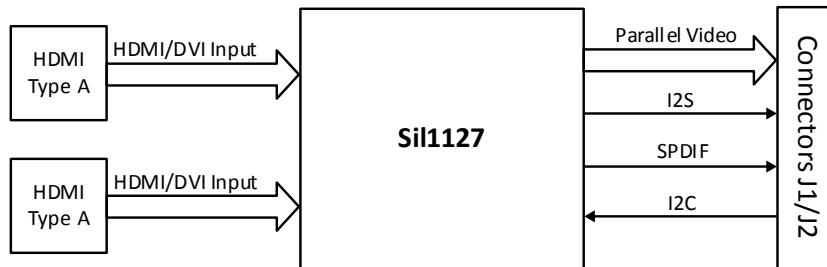

Figure 2.1 Functional Block Diagram

The Si1127A device is configured using the I²C interface from connector J2. The I²C registers monitor and control all functions of the Si1127A device, including selection of input. The Device Address Select Pin CI2CA on the Si1127A device is pulled low. Refer to [Table 2.1](#) for the corresponding I²C Address. For configuration, refer to the Si19223/9233/9127 HDMI Receivers Programmer's Reference (Si1-PR-1019) for detailed information. *The Programmer's Reference requires an NDA with Lattice Semiconductor.*

Table 2.1 Si1127A 7-bit I²C Address

Block	CI2CA = 0
Device Address	0x30

2.1. Switches

There is one push button switch, SW1, which controls the reset signal RX_RST. When pressing the push-button, logic 0 will be sent to the Si1127A RESET# pin. RX_RST is connected to GSRN on connector J1, allowing SW1 to control the reset signal for other connected boards.

There is one slide switch, SW2, which is connected to GPIO3/MUTEOUT of the Si1127A device and Pin 28 of connector J2. When this connection is being driven by either Si1127A device or connector J2, SW2 should be placed in the HIGH position (4.7K Ω pull-up resistor to 3.3 V) to prevent any contention.

2.2. HDMI Interface

There are two HDMI Type A connectors for connecting the HDMI VIP Input Board to an HDMI Source. ESD protection is provided on the TMDS signals.

3. High-Speed Headers

There are two 60 pin high speed headers, connectors J1 and J2, used to connect to a host board.

Table 3.1 Connector J1

*Note: Connected to SW2

4. Power Supply

Board power is supplied through connectors J1 and J2.

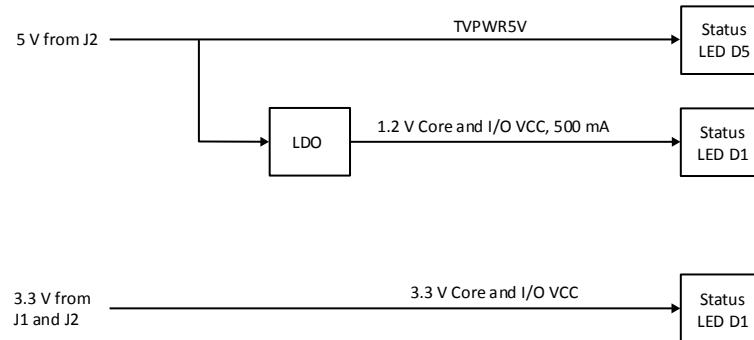

Figure 4.1. Power Supply

5. Status Indicators and Test Points

Three discrete LEDs are available to the user. These are driven by the Si1127A.

Table 5.1 User LEDs

Signal	LED #	Si1127A Pin	Color
PORT_1	D23	14 (GPIO4)	Green
PORT_2	D22	15 (GPIO5)	Green
SCDT	D25	12 (GPIO1/SDCT)	Green

Two discrete LEDs are used as status indicators. These are driven by the HDMI Ports.

Table 5.2 Status LEDs

Signal	LED #	Source	Color
RPWR1	D24	Port 1 - HDMI 5 V	Blue
RPWR2	D3	Port 2 - HDMI 5 V	Blue

Table 5.3 Test Points

Test Point	Connection
TP10	Si1127A Pin16/GPIO6
TP11	Si1127A Pin17/GPIO7
TP14	RPWR1
TP15	RPWR2
TP16	RX_MUTE
TP17	RX_SPDIF
