Revised 10/11/17

EZO-PMP™

Embedded Dosing Pump

Flow rate	**0.5ml to 105ml/min**
Accuracy	**+/- 1%**
Modes of operation	**Continuous dispensing** **Volume dispensing** **Constant flow rate** **Dose over time mode**
Calibration	**Single point**
Supplied tubing	**61 cm**
Tubing size	**Any 5mm O.D. tubing**
Data protocol	**UART & I²C**
Default I²C address	**103 (0x67)**
Operating voltage	**3.3V – 5V (logic)** **12V – 24V (motor)**
Pump head	**2 meters**
Data format	**ASCII**

Power consumption

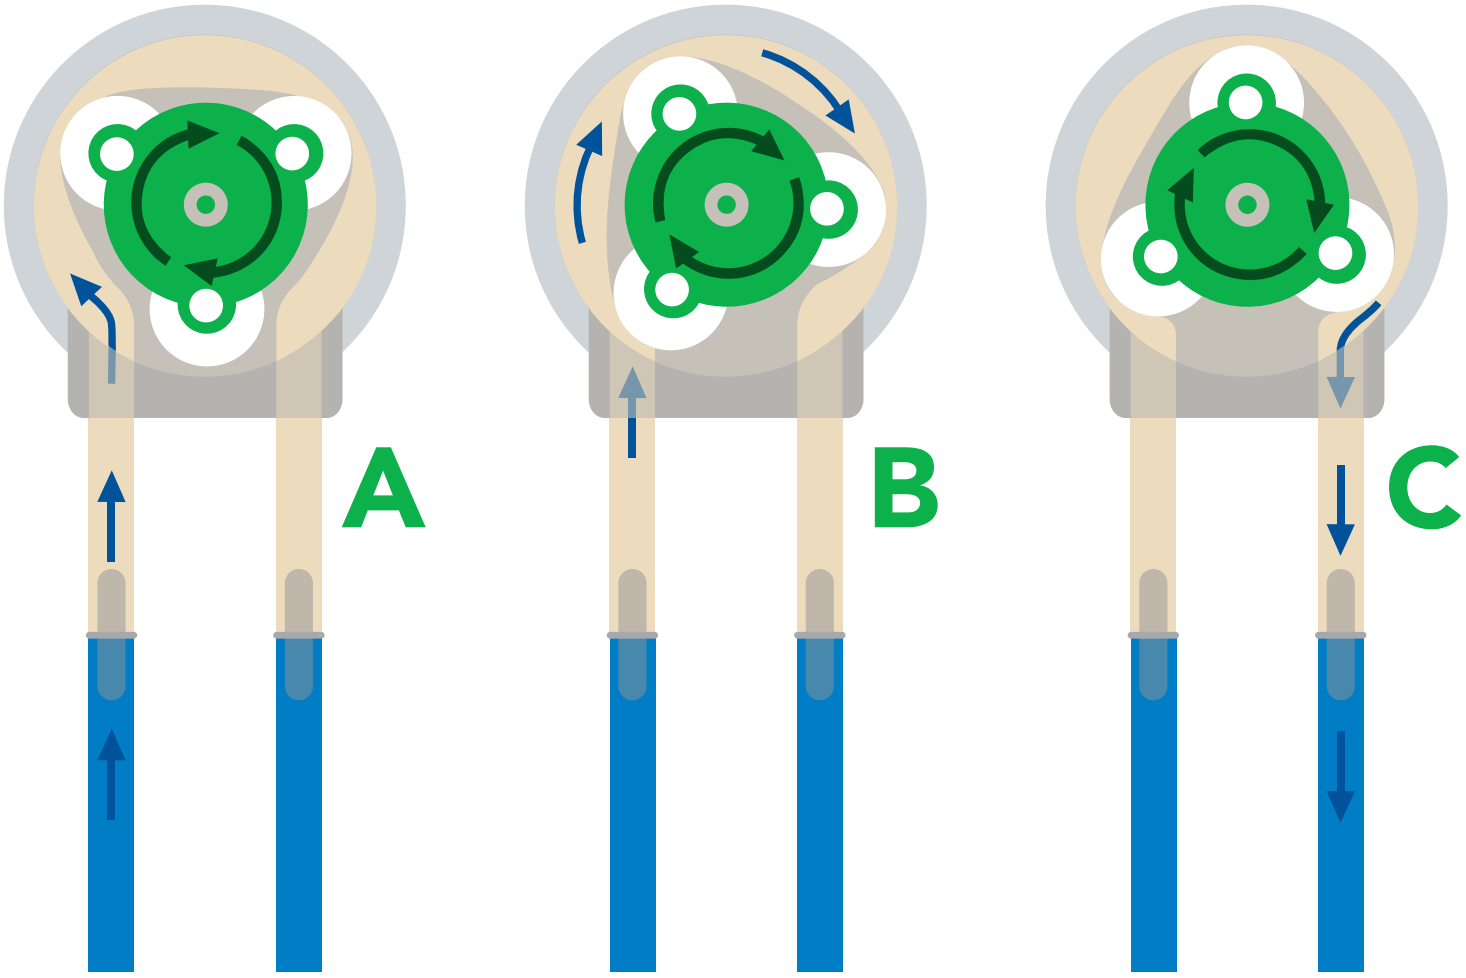
	LED	MAX	STANDBY	SLEEP
5V	ON	13.7 mA	13.4 mA	0.415 mA
	OFF	13.1 mA	12.8 mA	
3.3V	ON	12.5 mA	12.4 mA	0.13 mA
	OFF	12.3 mA	12.2 mA	
Motor	12V = ~400mA		24V = ~200mA	

Absolute max ratings

Parameter	MIN	TYP	MAX
Storage temperature (EZO-PMP™)	-65 °C		125 °C
Operational temperature (EZO-PMP™)	-40 °C	25 °C	85 °C
VCC	3.3V	5V	5.5V
Motor	10.8V	12V	24V

Operating principle

- ✓ Self-priming
- ✓ Run dry



Operating modes

The EZO-PMP™ can operate in four different modes.

Continuous dispensing
Run the pump continuously
105 ml/min ∞ *(with supplied tubing)*

Constant flow rate
Pump a specific volume per minute

Volume dispensing
Pump a specific volume
(Smallest possible volume is 0.5 ml)

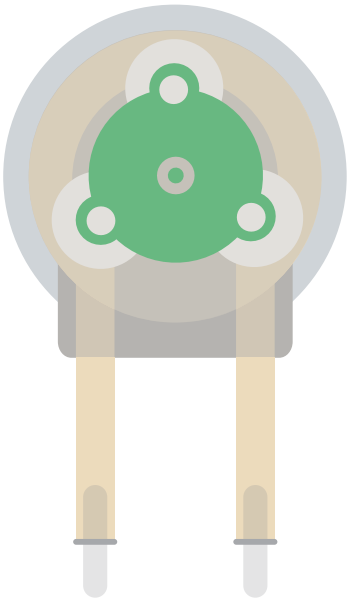
Dose over time mode
Pump a specific volume over a set time

Volume is always in ml.

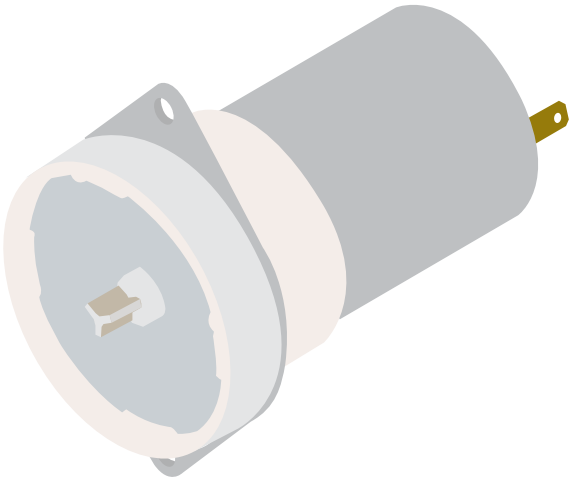
AtlasScientific™
Environmental Robotics
r 0.2

This device requires two power supplies
3.3V–5.5V for the control system
12V–24V to drive the motor

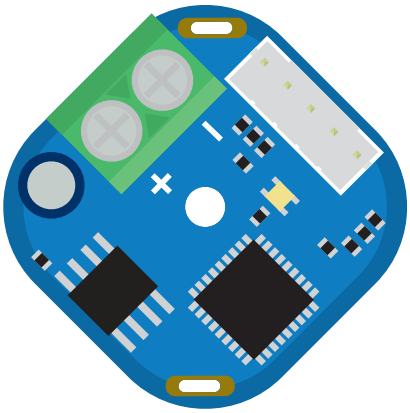
The Atlas Scientific EZO-PMP™ consists of three main components.



Cassette



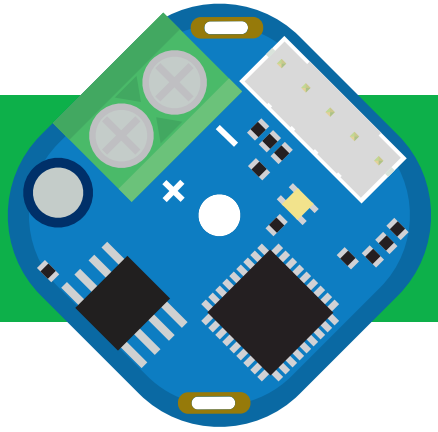
12 volt motor



Control system

The actual peristaltic pumping is done within the cassette. It has been designed to be easily detached from the motor and disassembled.

The 12 volt motor and control system have been soldered together. Both components are designed to operate as one single unit.



The control system has three main components

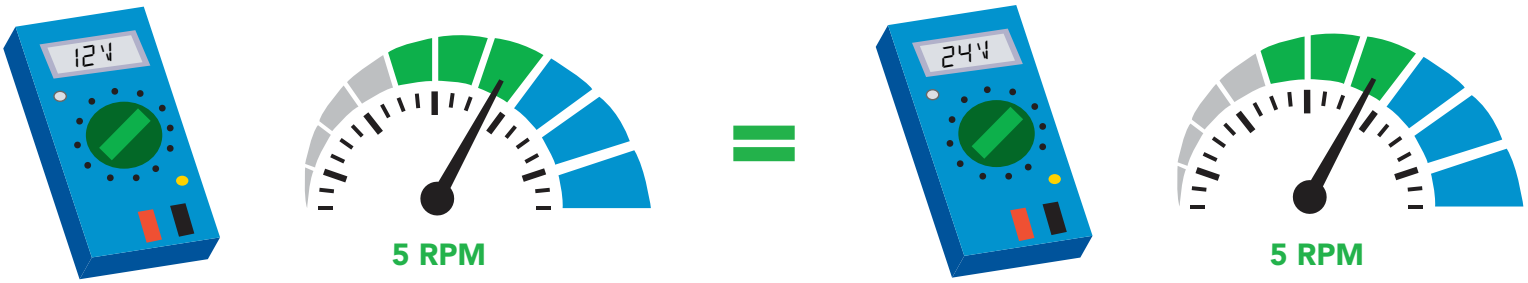
Keyed data and power connector
12–24 volt power input
Status indicator LED

Data and power cable pinout

AtlasScientific™
Environmental Robotics
r 0.2

Pump speed vs. voltage

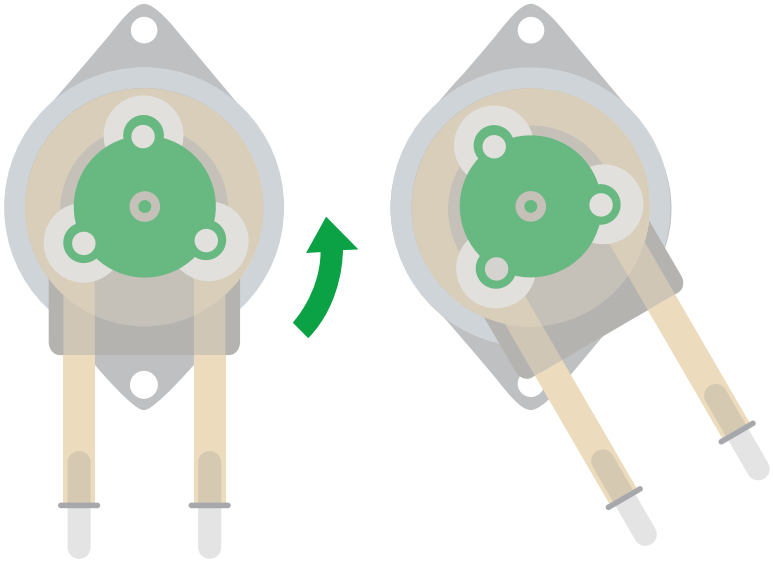
There is no change in pump speed at different voltages.



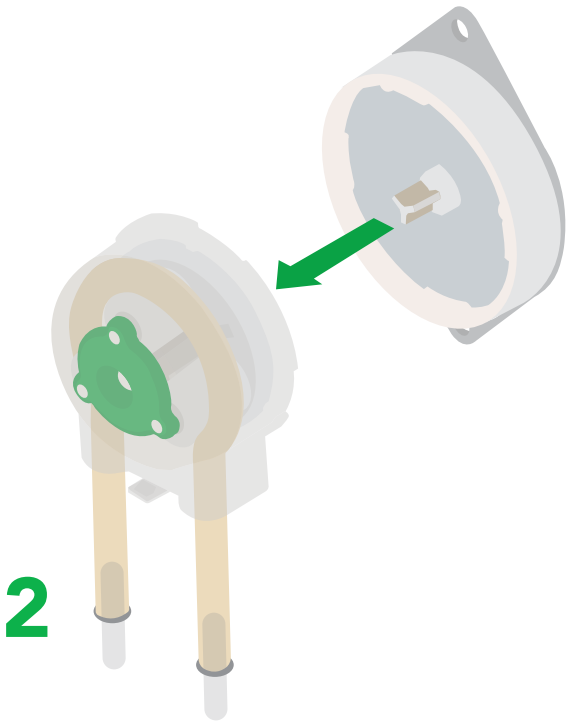
Interupt pin

When the pump is dispensing the interupt pin goes high.

Removing cassette



Turn cassette counterclockwise until it stops.

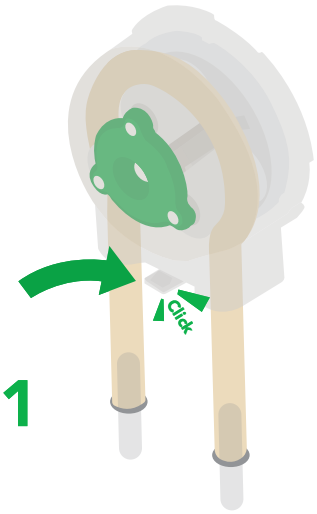


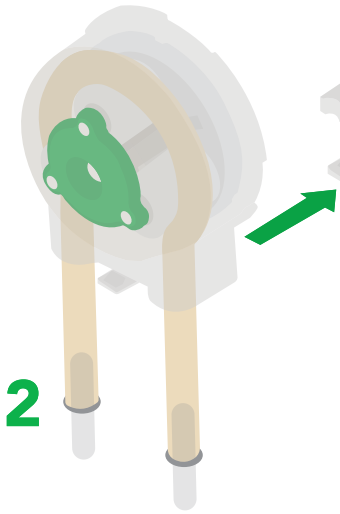
Pull cassette off the motor.

AtlasScientific™
Environmental Robotics
r 0.2

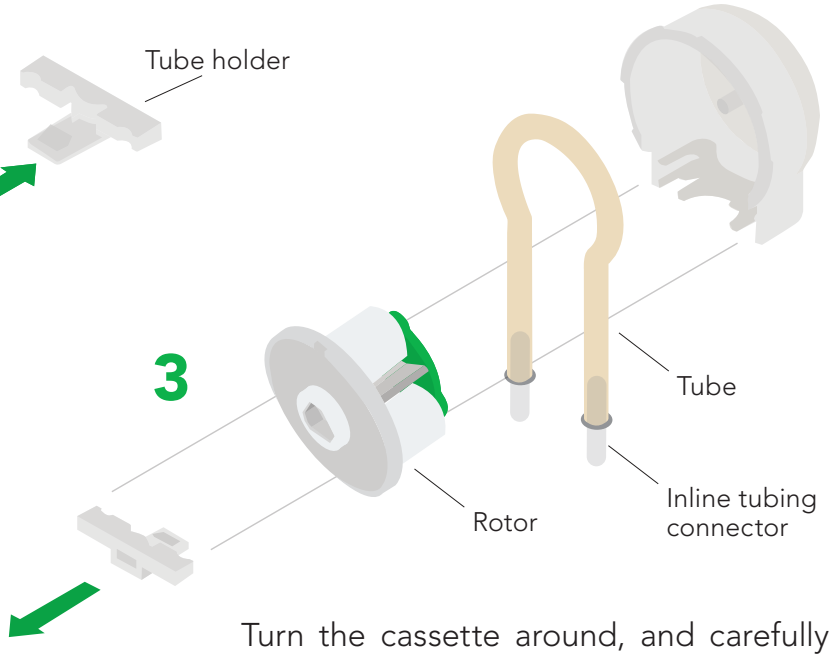
Removing tube assembly

The inner workings of the cassette are fragile and must be dismantled by hand. Using tools can damage or break the cassette.



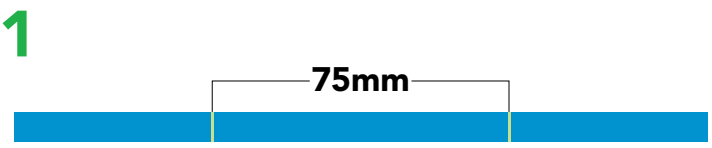


Gently push down the tube holder until it clicks, then remove.

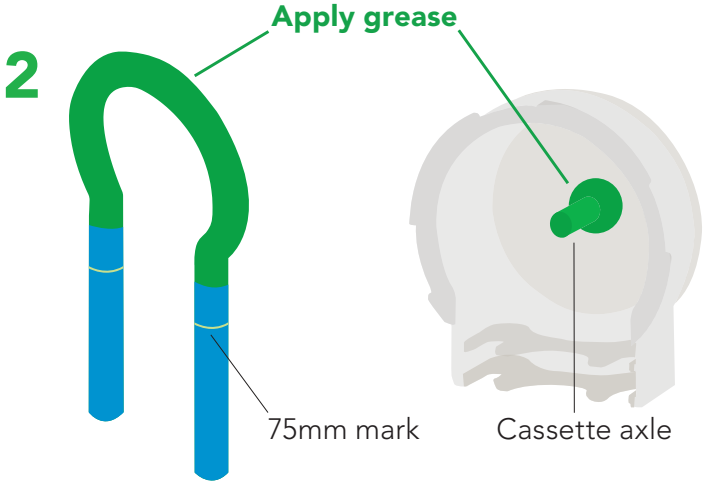


Turn the cassette around, and carefully remove rotor and pump tube.

Installing new tube assembly



Measure 75mm of pump tubing, and mark both ends with a soft-tip pen or marker.



Apply silicone lubricating grease to the marked areas on both the tubing and cassette axle.

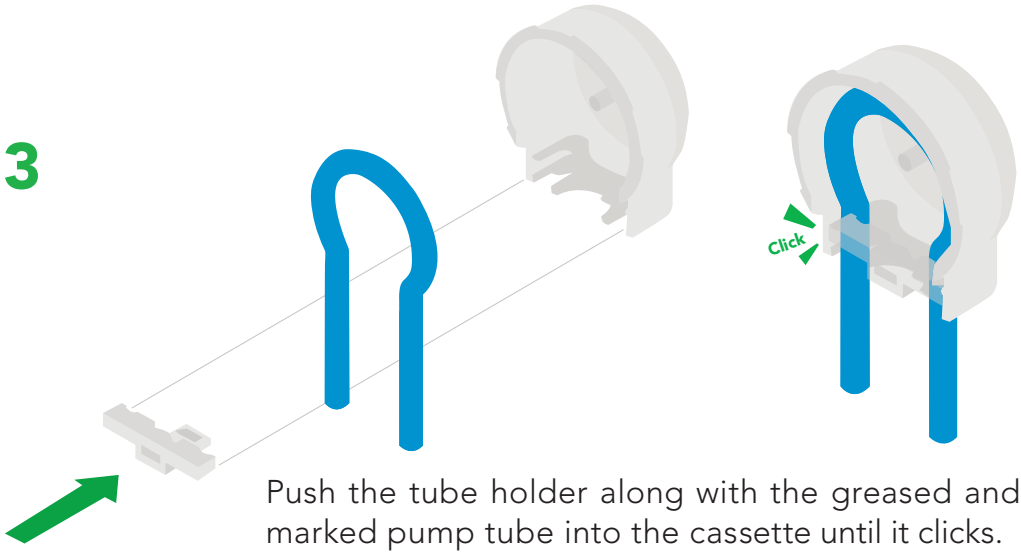
Do not operate this device without lubrication!

*Atlas Scientific recommends using **Super Lube** silicone lubricating grease.*

AtlasScientific™ Environmental Robotics

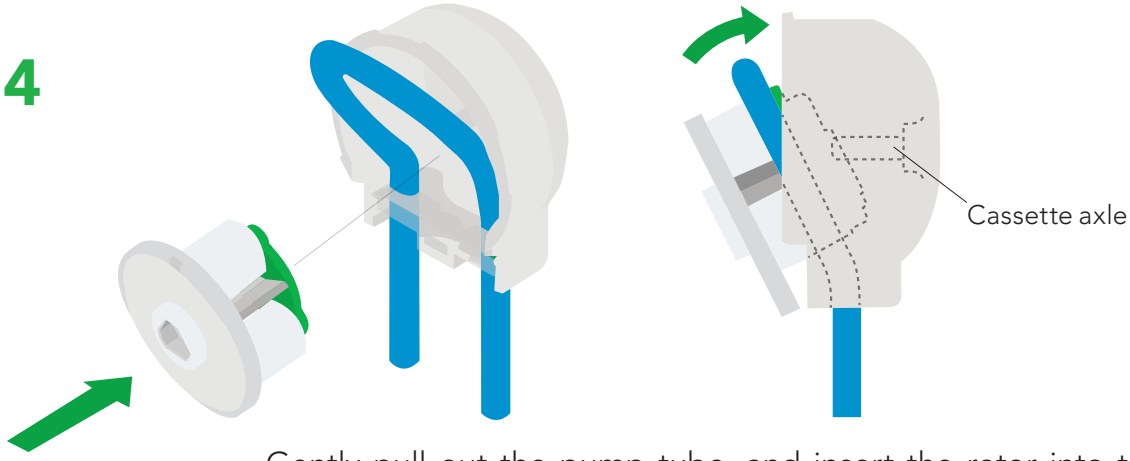
r 0.2

3

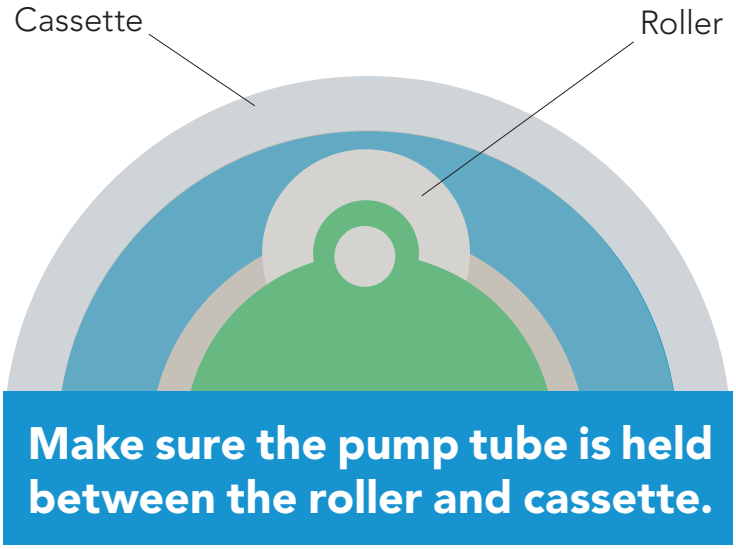


Push the tube holder along with the greased and marked pump tube into the cassette until it clicks.

4

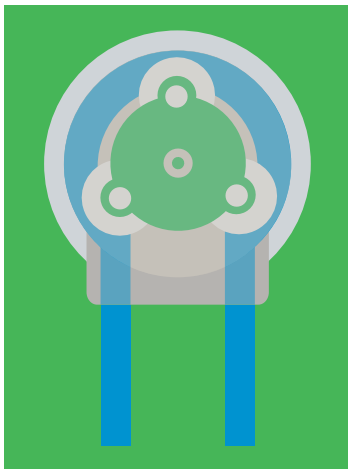


Gently pull out the pump tube, and insert the rotor into the pump tube. Align pump tube and rotor with the cassette axle.

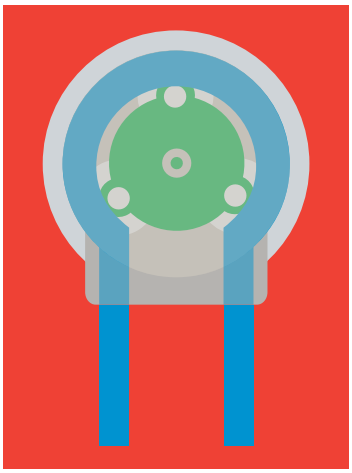


Make sure the pump tube is held between the roller and cassette.

✓ Correct



X Incorrect



Once the tubing has been replaced, run the pump for 3–5 minutes to break in the new tubing. **Remember, this pump can be run dry and does not need to pump liquid for the 3–5 minute break in period.**

Atlas Scientific™ Environmental Robotics

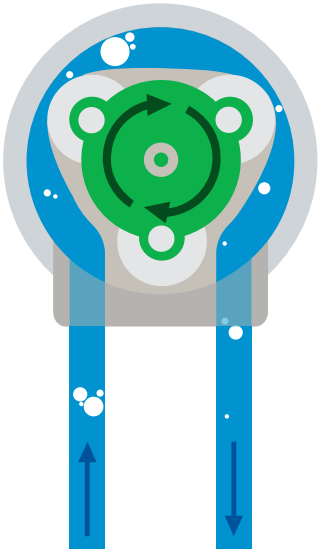
r 0.2

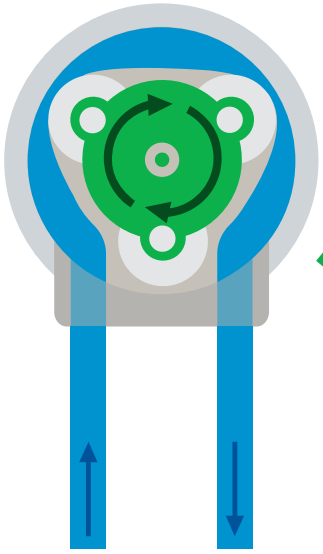
Calibration theory

Uncalibrated accuracy +/- 5%
Calibrated accuracy +/- 1%

Before calibration is attempted all the air bubbles should be removed from the tubing. This is done by running the pump while tapping the tubing. If air bubbles are not removed from the tubing they will slowly group together into larger air bubbles. Over time this will lead to accuracy issues.

Not ready for calibration X





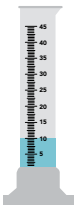
Ready for calibration ✓

Calibration types

Volume calibration
Volume over time calibration

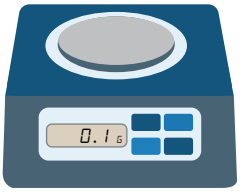
Calibration is optional. Both types of calibration are independent of each other and can be done at any time. Calibration can be done at any volume however; Atlas Scientific recommends using volumes above 5ml.

Equipment needed for calibration



An accurate graduated cylinder of at least 10ml.

Or



An accurate scale with a resolution of at least 0.1 grams

1 gram of water = 1ml
23.56 grams of water = 23.56ml

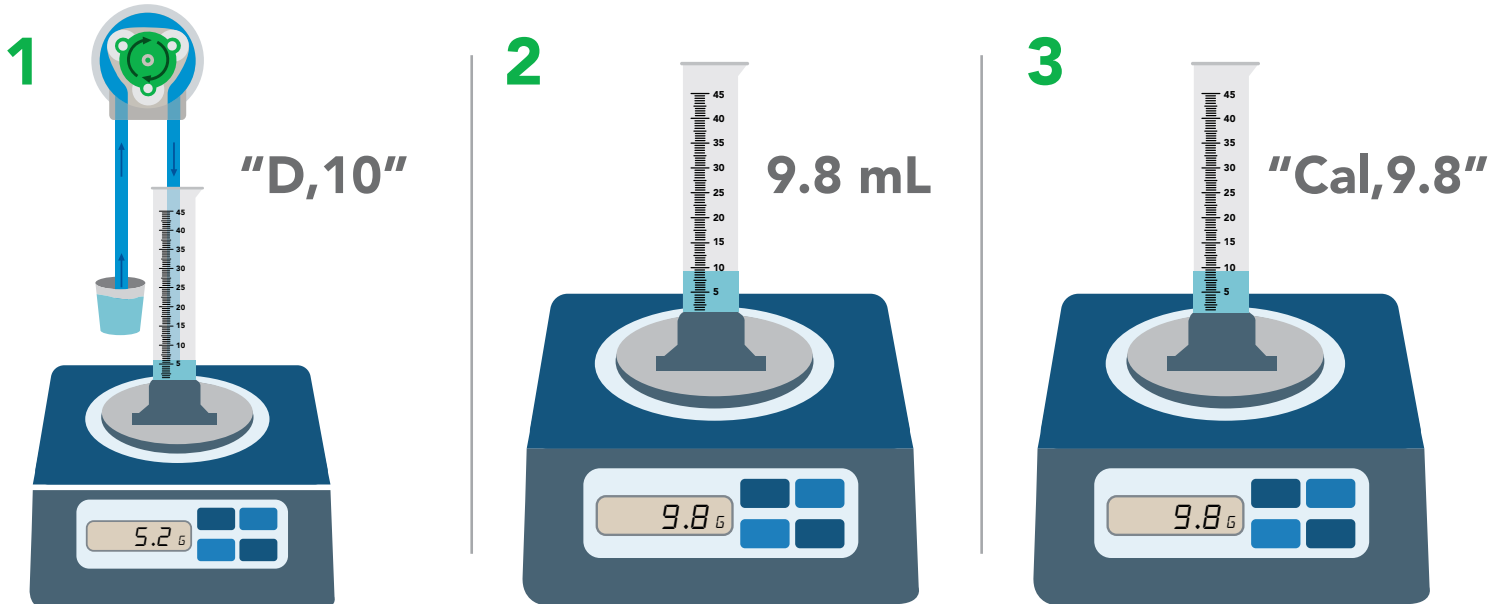
Calibration procedure

Calibration should be done with water and not a chemical

Make sure the tubing is full of water and has no bubbles before calibrating.

1. Instruct the pump to dispense a volume of water.
2. Measure the dispensed amount to determine how much water was actually dispensed.
3. Calibrate the pump by sending it the volume of liquid you have measured.

Example
Calibrate the pump by dispensing 10ml



1. Instruct the pump to dispense 10ml into a graduated cylinder or beaker on a scale.
2. Measure the amount of liquid that was actually dispensed.
3. Inform the pump how much liquid was actually dispensed.
4. Calibration is now complete.

Once the pump has been calibrated it will accurately dispense any volume of liquid. It has not been calibrated specifically to the volume used during the calibration procedure (10 ml). It has now been calibrated to all volumes.

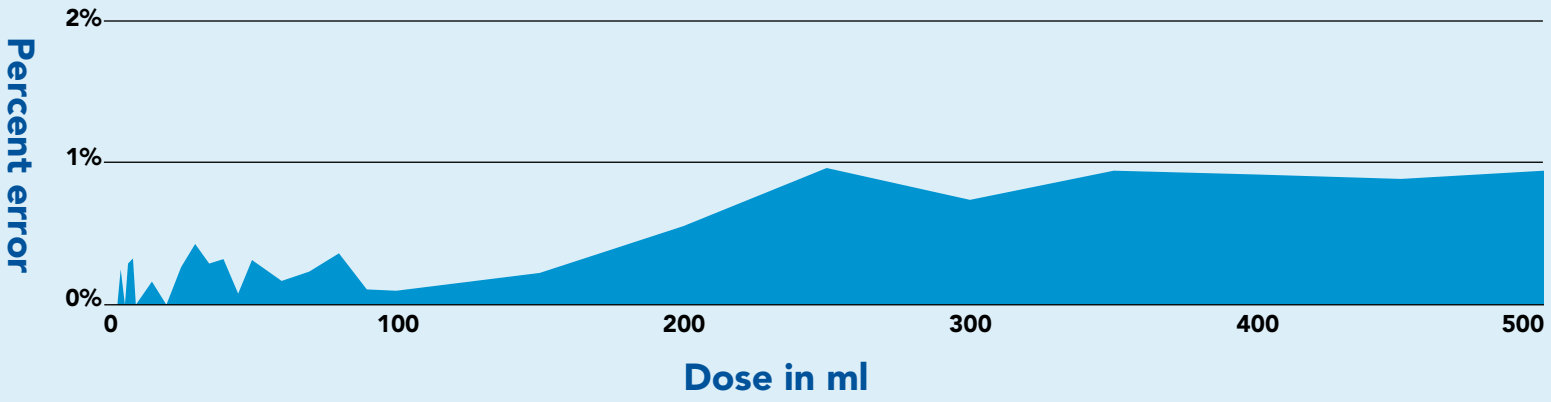
Use the same procedure to perform a volume over time calibration.

Accuracy

Uncalibrated accuracy +/- 5%
Calibrated accuracy +/- 1%

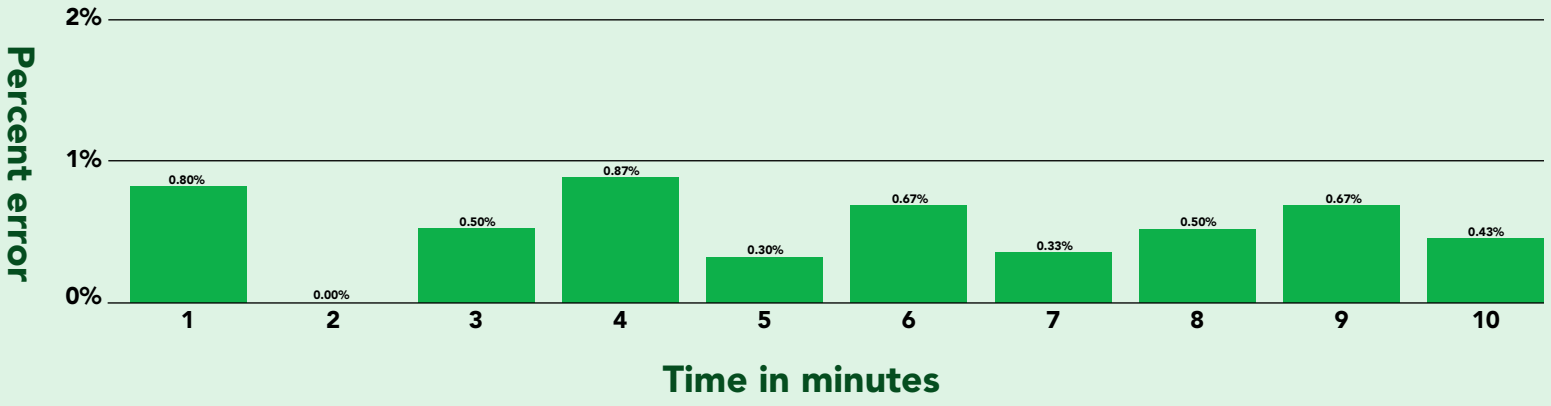
Volume dispensing mode

calibrated at 10ml



Dose over time mode

calibrated at 10ml over 90 seconds



Pump head

Pump head refers to the maximum vertical height a pump can dispense. The EZO-PMP™ has a pump head of 2 meters *(6.5')*.

Response codes

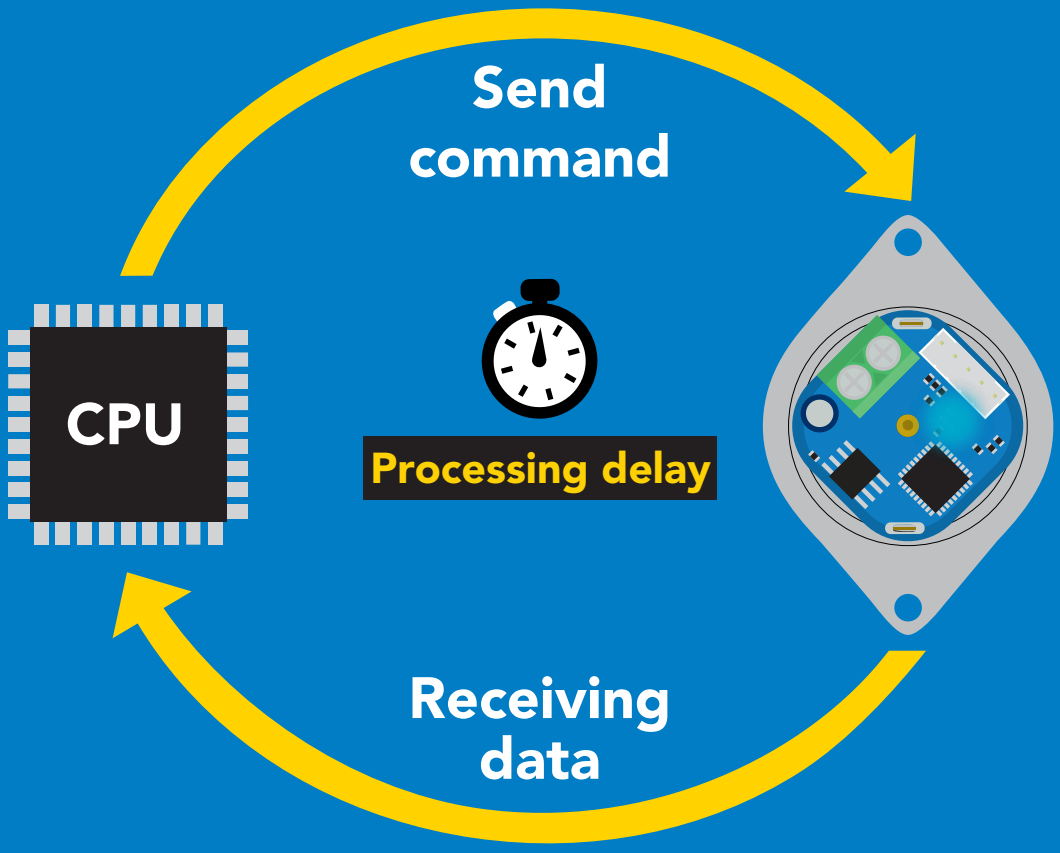
After a command has been issued, a 1 byte response code can be read in order to confirm that the command was processed successfully.

Reading back the response code is completely optional, and is not required for normal operation.



Example

```
I2C_start;
I2C_address;
I2C_write(EZO_command);
I2C_stop;

delay(300);   Processing delay

I2C_start;
I2C_address;
Char[ ] = I2C_read;
I2C_stop;
```

If there is no processing delay or the processing delay is too short, the response code will always be 254.

Response codes

Single byte, not string

255	no data to send
254	still processing, not ready
2	error
1	successful request

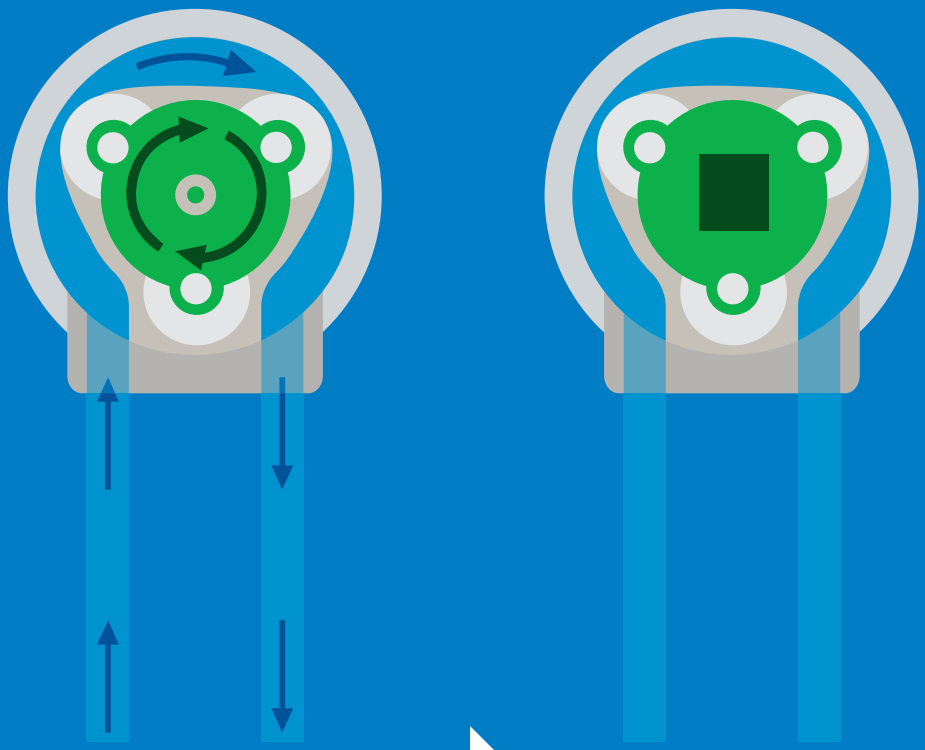
Stop dispensing

Command syntax

300ms processing delay

X stop dispensing

Example	Response
X	Wait 300ms · 1 (Dec) · *DONE,v (ASCII) · 0 (Null) · v = volume dispensed



X
dispensing

*DONE,10.15
Stopped

AtlasScientific™
Environmental Robotics
r 0.1

Total volume dispensed

Command syntax

300ms processing delay

TV,?	shows total volume dispensed
ATV,?	absolute value of the total volume dispensed
Clear	clears the total dispensed volume

Example	Response
TV,?	Wait 300ms · 1 Dec · ?total,623.00 ASCII · 0 Null
ATV,?	Wait 300ms · 1 Dec · ?total,434.50 ASCII · 0 Null
clear	Wait 300ms · 1 Dec · 0 Null · total now 0.00

AtlasScientific™ Environmental Robotics

r 0.1

Calibration

Command syntax

300ms processing delay

Calibrate to the actual volume dispensed.

Cal,v	v = corrected volume
Cal,clear	delete calibration data
Cal,?	device calibrated?

Example

Response

Cal,24.01

Wait 300ms | 1 Dec | 0 Null

Cal,clear

Wait 300ms | 1 Dec | 0 Null

Cal,?

Wait 300ms | 1 Dec | ?Cal,1 ASCII (fixed volume) | 0 Null

or

Wait 300ms | 1 Dec | ?Cal,2 ASCII (volume/time) | 0 Null

Wait 300ms | 1 Dec | ?Cal,3 ASCII (both) | 0 Null

or

Wait 300ms | 1 Dec | ?Cal,0 ASCII (uncalibrated) | 0 Null

AtlasScientific™ Environmental Robotics

r 0.1

Enable/disable parameters from output string

Command syntax

300ms processing delay

O, [parameter],[1,0]	enable or disable output parameter
O,?	enabled parameter?

Example	Response
O,V,1	Wait 300ms — 1 Dec — 0 Null — enable volume being pumped
O,TV,0	Wait 300ms — 1 Dec — 0 Null — disable total volume pumped
O,ATV,1	Wait 300ms — 1 Dec — 0 Null — enable absolute volume pumped
O,?	Wait 300ms — 1 Dec — ?,O,V,TV,ATV ASCII — 0 Null — if all three are enabled

AtlasScientific™ Environmental Robotics

r 0.1

Pump voltage

Command syntax

300ms processing delay

PV,? check pump voltage

Example

PV,?

Response

1	?PV,13.86	0
Dec	ASCII	Null

Response breakdown

?PV, 13.86

Pump input voltage

Device information

Command syntax

300ms processing delay

i device information

Example

i

Response

1	?i,PMP, 1.1	0
Dec	ASCII	Null

Response breakdown

?i,	PMP,	1.1
	Device	Firmware

Reading device status

Command syntax

300ms processing delay

Status voltage at Vcc pin and reason for last restart

Example

Status

Response

1	?Status,P,5.038	0
Dec	ASCII	Null

Response breakdown

?Status, P, 5.038

P, ↑ Reason for restart

5.038 ↑ Voltage at Vcc

Restart codes

P	powered off
S	software reset
B	brown out
W	watchdog
U	unknown

AtlasScientific™ Environmental Robotics

r 0.1

Sleep mode/low power

Command syntax

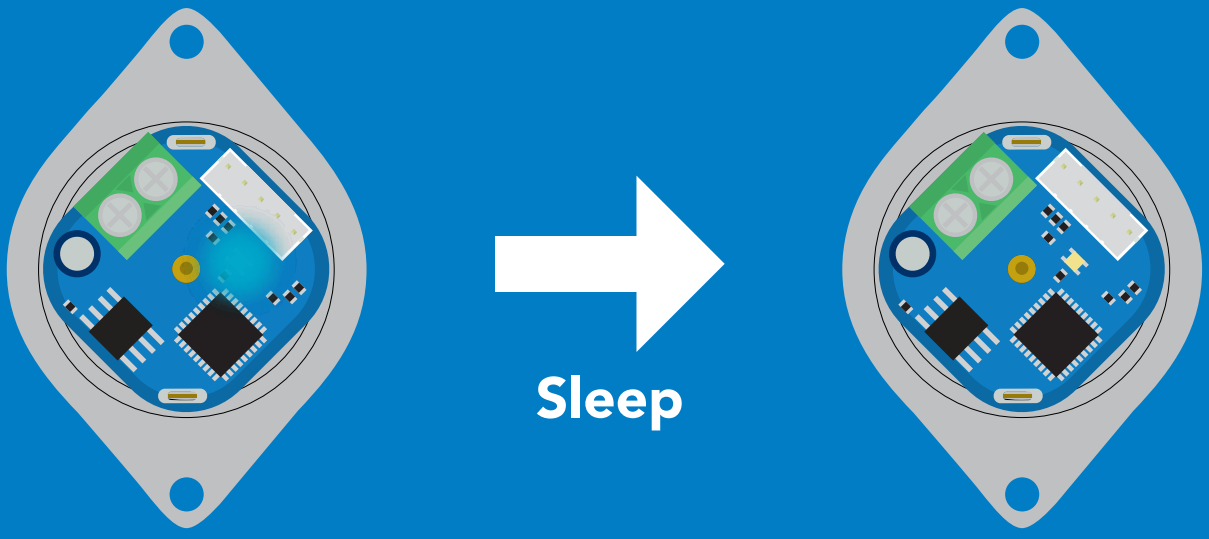
Sleep	enter sleep mode/low power

Send any character or command to awaken device.

Example	Response
Sleep	no response
Any command	wakes up device

Do not read status byte after issuing sleep command.

	STANDBY	SLEEP
5V	13.4 mA	0.415 mA
3.3V	12.4 mA	0.13 mA



Standby

Sleep

AtlasScientific™

Protocol lock

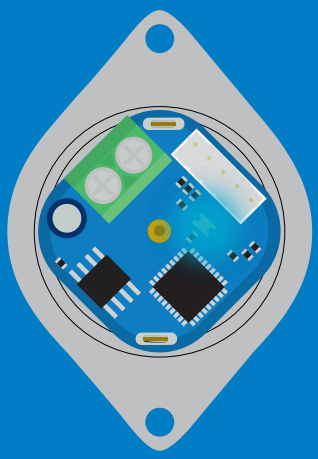
Command syntax

300ms processing delay

Plock,1	enable Plock	Locks device to I²C mode.
Plock,0	disable Plock	default
Plock,?	Plock on/off?	

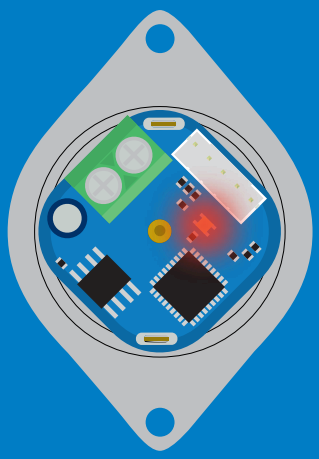
Example	Response
Plock,1	Wait 300ms → 1 (Dec) 0 (Null)
Plock,0	Wait 300ms → 1 (Dec) 0 (Null)
Plock,?	Wait 300ms → 1 (Dec) ?Plock,1 (ASCII) 0 (Null)

Plock,1

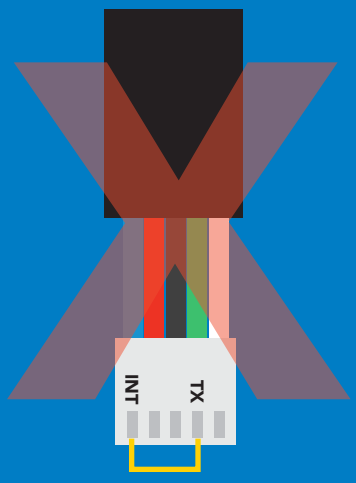


cannot change to UART

Serial, 9600



cannot change to UART



Atlas Scientific™ Environmental Robotics

r 0.1

I²C address change

Command syntax

300ms processing delay

I2C,n sets I²C address and reboots into I²C mode

Example	Response
I2C,101	device reboot

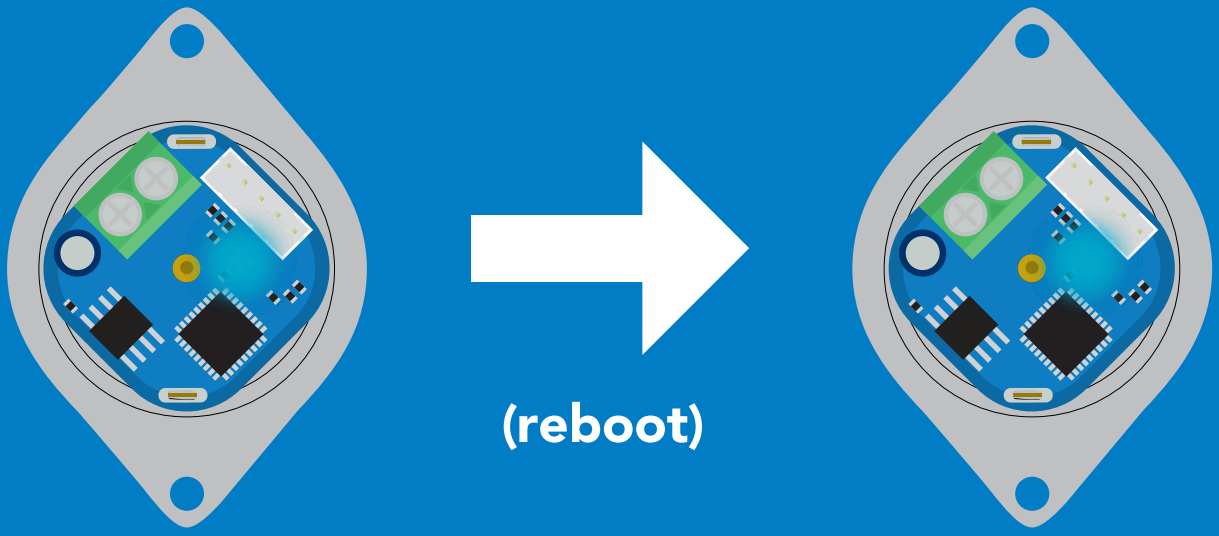
Warning!

Changing the I²C address will prevent communication between the circuit and the CPU, until the CPU is updated with the new I²C address.

Default I²C address is 103 (0x67).

n = any number 1 – 127

I2C,101



Factory reset

Command syntax

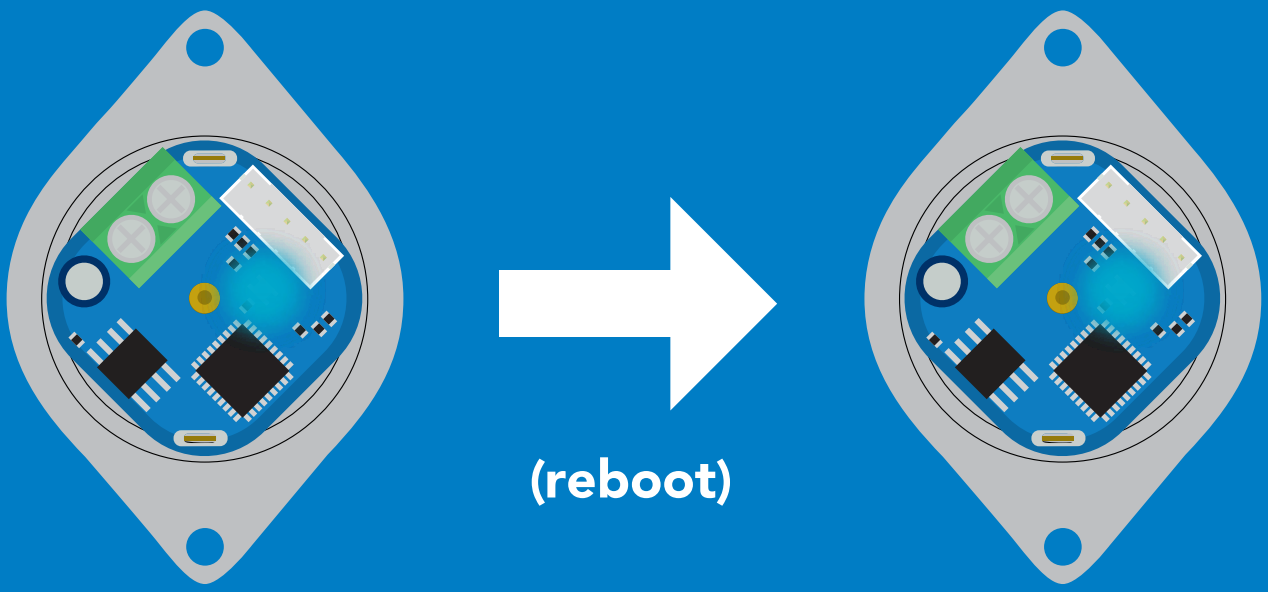
Factory reset will not take the device out of I²C mode.

Factory	enable factory reset	I²C address will not change

Example	Response
Factory	device reboot

Clears calibration
LED on
Response codes enabled

Factory



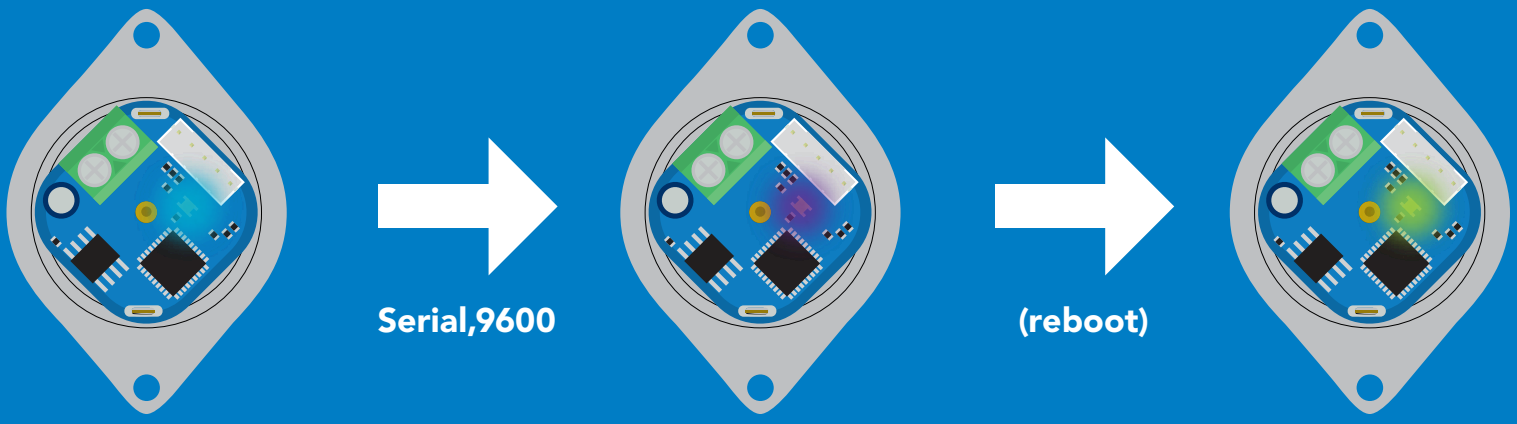
Change to UART mode

Command syntax

Baud,n switch from I²C to UART

Example	Response
Baud,9600	reboot in UART mode

n =
- 300
- 1200
- 2400
- 9600
- 19200
- 38400
- 57600
- 115200



Manual switching to UART

- Make sure Plock is set to 0
- Disconnect ground (power off)
- Disconnect TX and RX
- Connect TX to INT
- Confirm RX is disconnected
- Connect ground (power on)
- Wait for LED to change from Blue to Green
- Disconnect ground (power off)
- Reconnect all data and power

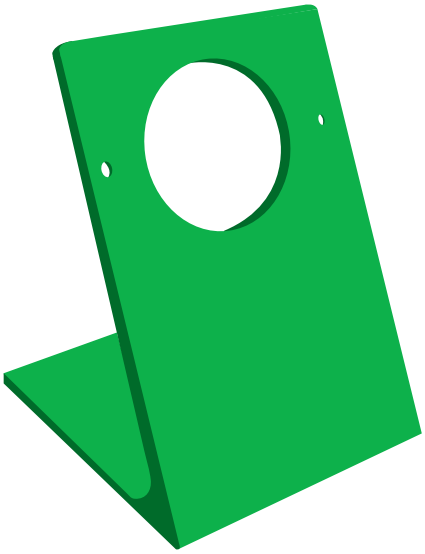
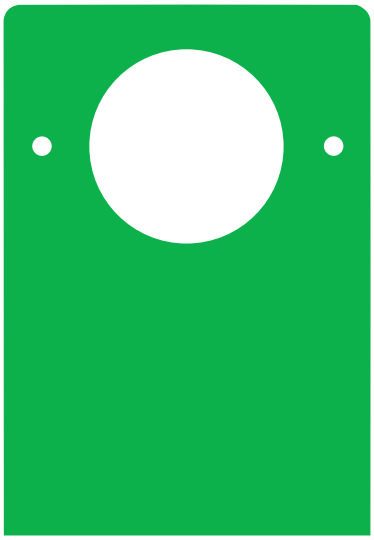
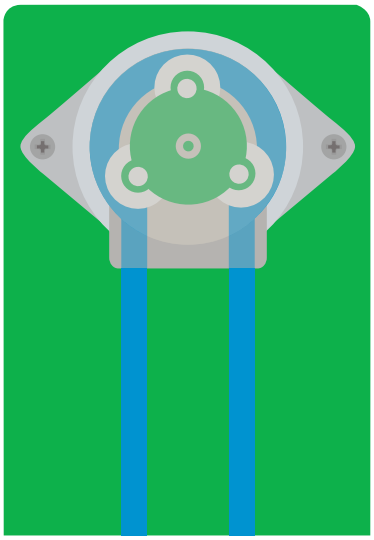
Mounting the EZO-PMP™

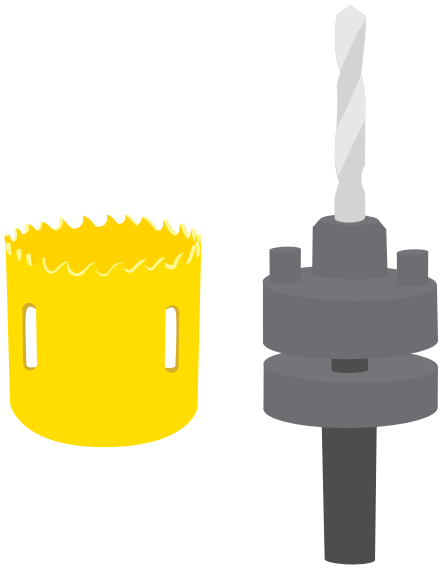
There are a many different ways to mount the EZO-PMP™ Embedded Dosing Pump. If you have a 3D printer you can use the dosing pump stand we created, by clicking here. The dosing pump stand has been measured to perfectly fit the EZO-PMP™ and even has screw holes in place for you to help mount the dosing pump to the stand. Feel free to modify this stand design as needed.







However, if you would like to mount the EZO-PMP™ Embedded Dosing Pump into other materials, you will need the following tools:



1 1/4"
Hole Saw

Either are fine to make the larger hole.

OR

1 3/8"
Step Bit

1/8"
Drill Bit

Perfect for screw holes.

Datasheet change log

Datasheet V 1.3

Revised art and added pump head information on pg 11.

Datasheet V 1.2

Revised Plock pages to show default value.

Datasheet V 1.1

Added mounting information on pg 70.

EZO-PMP™ firmware changes

V1.0 – Initial release (April 28, 2017)

Warranty

Atlas Scientific™ Warranties the EZO-PMP™ Embedded Dosing Pump to be free of defect during the debugging phase of device implementation, or 30 days after receiving the EZO-PMP™ Embedded Dosing Pump(which ever comes first).

The debugging phase

The debugging phase as defined by Atlas Scientific™ is the time period when the EZO-PMP™ Embedded Dosing Pump is inserted into a bread board, or shield. If the EZO-PMP™ Embedded Dosing Pump is being debugged in a bread board, the bread board must be devoid of other components. If the EZO-PMP™ Embedded Dosing Pump is being connected to a microcontroller, the microcontroller must be running code that has been designed to drive the EZO-PMP™ Embedded Dosing Pump exclusively and output the EZO-PMP™ Embedded Dosing Pump data as a serial string.

It is important for the embedded systems engineer to keep in mind that the following activities will void the EZO-PMP™ Embedded Dosing Pump warranty:

- **Soldering any part of the EZO-PMP™ Embedded Dosing Pump.**
- **Running any code, that does not exclusively drive the EZO-PMP™ Embedded Dosing Pump and output its data in a serial string.**
- **Embedding the EZO-PMP™ Embedded Dosing Pump into a custom made device.**
- **Removing any potting compound.**

Reasoning behind this warranty

Because Atlas Scientific™ does not sell consumer electronics; once the device has been embedded into a custom made system, Atlas Scientific™ cannot possibly warranty the EZO-PMP™ Embedded Dosing Pump, against the thousands of possible variables that may cause the EZO-PMP™ Embedded Dosing Pump to no longer function properly.

Please keep this in mind:

1. **All Atlas Scientific™ devices have been designed to be embedded into a custom made system by you, the embedded systems engineer.**

2. **All Atlas Scientific™ devices have been designed to run indefinitely without failure in the field.**

3. **All Atlas Scientific™ devices can be soldered into place, however you do so at your own risk.**

Atlas Scientific™ is simply stating that once the device is being used in your application, Atlas Scientific can no longer take responsibility for the EZO-PMP™ Embedded Dosing Pumps continued operation. This is because that would be equivalent to Atlas Scientific™ taking responsibility over the correct operation of your entire device.
