

TDU / TDUH / TDUL SERIES

Encapsulated Solid-State, Delay-on-Make Timers

Wiring Diagram

Description

The TDU Series are encapsulated solid-state, delay-on-make timers that combine digital timing circuitry with universal voltage operation. The TDU offers DIP switch adjustment allowing accurate selection of the time delay over the full time delay range. This series is an excellent choice for process control systems and OEM equipment.

Operation (Delay-on-Make)

Upon application of input voltage, the time delay begins. The output is de-energized before and during the time delay. At the end of the time delay, the output energizes and remains energized until input voltage is removed.

Reset: Removing input voltage resets the time delay and output.

Features & Benefits

FEATURES	BENEFITS
Universal input voltage	Meets wide application needs
Microcontroller based	Repeat Accuracy +/- 0.5% or 20ms, whichever is greater
Totally solid state and encapsulated	No moving parts to arc and wear out over time, and encapsulated to protect against shock, vibration, and humidity
3 time ranges available (0.1s to 2.8h)	Makes it versatile for use in many applications
DIP switch adjustment	Provides first time setting accuracy
