

## Temperature probe kit based on STLM75

### Features

- User friendly STLM75 board
- Complete STLM75 pinout for a standard DIL 24 socket
- Fully compatible with and STEVAL-MKI109V3 motherboards
- RoHS compliant
- WEEE compliant

### Description

The STEVAL-MKI204V1K evaluation kit consists of a probe with the STLM75 temperature sensor connected via flat cable to the STEVAL-MKIGIBV1 adapter board, so it can interface with the STEVAL-MKI109V3 motherboard.

The device small package dimensions allow it to be mounted on top of a very thin probe, so it can take temperature readings not influenced by heat from other electronic components or boards.

The STEVAL-MKIGIBV1 can be plugged into a standard DIL24 socket.

The kit provides the complete STLM75 pinout and comes ready-to-use with the required decoupling capacitors on the VDD power supply line.

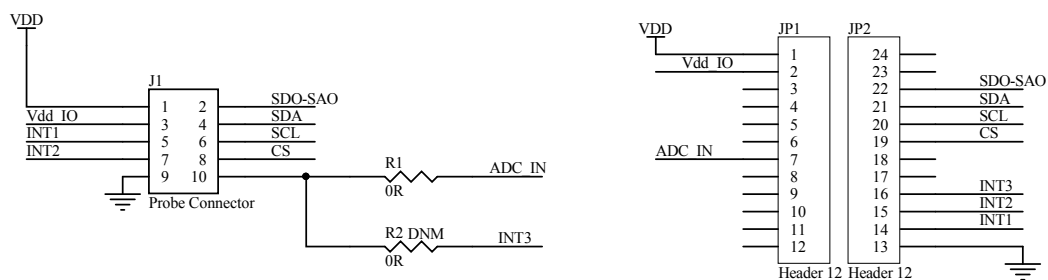

The STEVAL-MKI109V3 motherboards feature a high performance 32-bit microcontroller functioning as a bridge between the sensor and a PC running the free Unico GUI graphical user interface or dedicated software routines for customized applications.

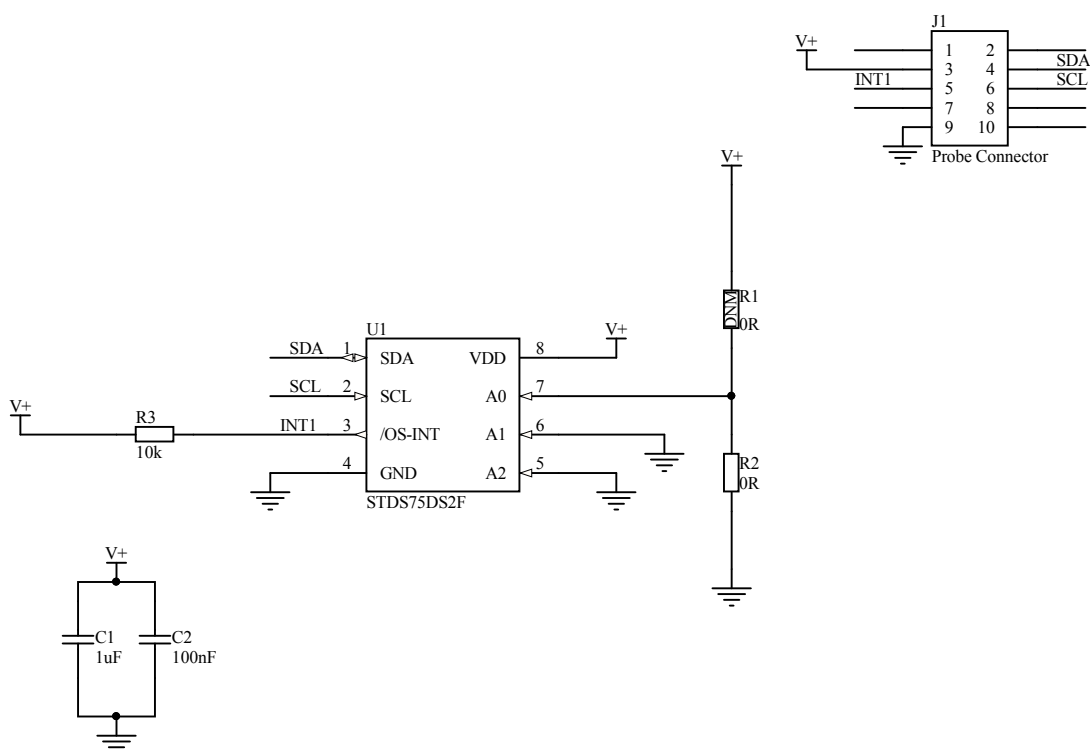

Product summary	
Temperature probe kit based on STLM75	STEVAL-MKI204V1K
High-precision digital temperature sensor and thermal watchdog	STLM75
ST MEMS adapter motherboard based on the STM32F401VET6 compatible with ST MEMS adapters	STEVAL-MKI09V3
