

4W LED Driver Demoboard with Accurate Average-Mode Constant Current Control

General Description

The HV9967BDB1 demoboard is a high-brightness LED driver designed to drive 4 LEDs in series at currents up to 350mA from a 20 - 60V DC input. The demoboard uses the Supertex's HV9967B in a buck configuration in a constant off-time mode.

The HV9967BDB1 LED driver features tight regulation of the LED current within a few milliamps over the entire range of the input voltage (i.e. 20 - 60VDC). The LED current accuracy is almost insensitive to the passive component tolerances, such as the output filter inductance or the timing resistor.

PWM dimming can be achieved by applying a pulse-width-modulated square wave signal between the PWMD and GND pins.

Specifications

Parameter	Specification
Input voltage	20 - 60 VDC
Output voltage	10 -15VDC (4 x LEDs)
Output current	350mA \pm 5%
Output current ripple	20% pk-pk (Typical, depending on the type of LED)
Switching frequency	Variable with constant $T_{OFF} = 5\mu s \pm 20\%$
Full load efficiency	Typical 80% minimum
Output short circuit protection	Included, hiccup mode

Connection Diagram

Connections

1. Connect the LED string between LED+ (Anode of LED string) and LED- (Cathode of LED string).
2. Connect the PWMD terminal to the VDD terminal to enable the LED driver if PWM dimming is not required.
3. Connect the input DC voltage between the VIN+ and VIN- terminals.

Circuit Schematic

Typical Characteristics

Normal Operation:

Fig.1-4 shows the waveforms during normal operation at loading of 4 x LED in series at different input.

Fig.1: 20V Input

Fig.2: 30V Input

Fig.3: 40V Input

Fig.4: 60V Input

Ch1 (Blue) : Drain-Source Voltage (10V/div)
 Ch4 (Green) : Output LED Current (50mA/div)
 Time Scale : 4μs/div

PWM Dimming Operation:

PWM dimming operation at 4xLED in series with an external TTL square wave signal is shown in Figs.5 - 7. Fig.5 shows the overall operation of the circuit with PWM dimming input and Fig.6 and 7 show the rise and fall times of the LED current during PWM dimming.

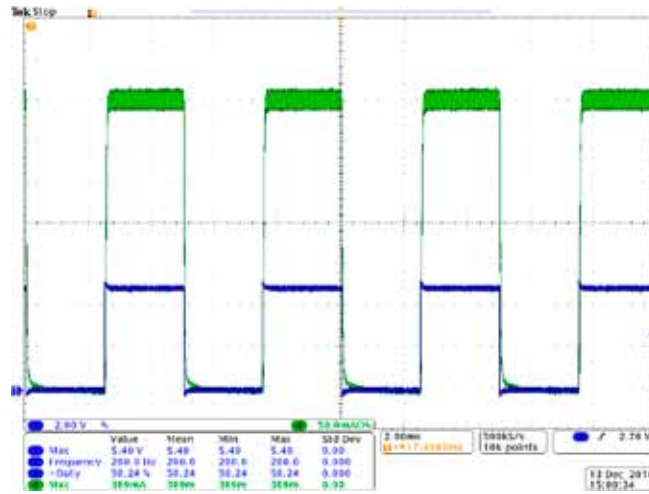

Fig.5: PWM Dimming at 24V

Ch1 (Blue) : Drain-Source Voltage (2V/div)
 Ch4 (Green) : Output LED Current (50mA/div)
 Time Scale : 2ms/div

Fig.6: PWM Dimming at 24V – Rise Time

Ch1 (Blue) : Drain-Source Voltage (2V/div)
 Ch4 (Green) : Output LED Current (50mA/div)
 Time Scale : 2µs/div

Fig.7: PWM Dimming at 24V – Fall Time
