THIS COPYRIGHTED DOCUMENT IS THE PROPERTY OF GLENAIR, INC. AND IS FURNISHED ON THE CONDITION THAT IT IS NOT TO BE DISCLOSED, REPRODUCED IN WHOLE OR IN PART, OR USED TO SOLICIT QUOTATIONS FROM COMPETITIVE SOURCES, OR USED FOR MANUFACTURE BY ANYONE OTHER THAN GLENAIR, INC. WITHOUT WRITTEN PERMISSION FROM GLENAIR, INC. THE INFORMATION HEREIN HAS BEEN DEVELOPED AT GLENAIR'S EXPENSE AND MAY BE USED FOR ENGINEERING EVALUATION AND INCORPORATION INTO TECHNICAL SPECIFICATIONS AND OTHER DOCUMENTS WHICH SPECIFY PROCUREMENT OF PRODUCTS FROM GLENAIR, INC.

**050-327 Product Brief**  
**PCB Mount Transceiver**  
**10 Gbps, MMF, 3.3V**

**PCB Mount Fiber Optic Transceiver, 10 Gbps, MMF, 3.3V**

Glenair 050-327, is a ruggedized harsh environment PCB Mount Transceiver with electrical and optical functionality equivalent to SFP transceivers but with mechanical design that is suited to the harsh temperature and vibration environments found in Military, Aerospace, Railway, Oil and Gas, and Industrial applications. The PCB Mount optical transceivers also support optional Digital Monitoring Interface (DMI) features in accordance with SFF 8472. The Transceiver is comprised of a transmitter section and a receiver section that reside on a common package and interface with a host board through a high speed electrical connector.

The transmitter section includes the Transmitter Optical Subassembly (TOSA) and laser driver circuitry. The TOSA, containing an 850 nm VCSEL (Vertical Cavity Surface Emitting Laser) light source, is located at the optical interface and mates with the GC optical connector. The TOSA is driven by a laser driver, which converts differential logic signals into an analog laser diode drive current. This laser driver circuit regulates the optical power at the desired level provided the data pattern is DC balanced (for example 8B10B encoding).

The receiver section includes the Receiver Optical Subassembly (ROSA) and amplification/quantization circuitry. The ROSA, containing a PIN photodiode and trans-impedance preamplifier, is located at the optical interface and mates with the GC optical connector. The ROSA is mated to a limiting amplifier IC that provides post-amplification and quantization. Also included is a Loss Of Signal (LOS) detection circuit.

**KEY FEATURES/BENEFITS**

- SFP+ Compatible Electrical I/O signal levels
- 850nm VCSEL lasers to support 10.3125 Gbps
- PIN PD to support high sensitivity 10.3125 Gbps
- Industry standard CML input and outputs that make for simple integration on customer host PCB
- Glenair Rugged GC Optical connector for high shock and vibration applications
- Transceiver is securely mounted with screws to PCB to ensure excellent shock and vibration performance
- High-Speed Electrical plug-in connector eliminates the need for soldering & enables ease of servicing
- Captive screws to simplify manufacturing logistics and assembly
- Small: Approx. 0.8" x 0.9" x 0.5"
- -40°C to +85°C Operating Case Temperature
- Glenair fiber jumpers connect from transceiver to any Glenair Mil/Aero Fiber Optic Connector Style
- Evaluation fixtures available
- Digital Diagnostic and Monitoring (DMI) based on SFF-8472, enables monitoring of:
  - Transmitted optical power
  - Received optical power,
  - Laser bias current,
  - Temperature
  - Supply voltage

**APPLICATIONS**

- Harsh Environment such as: Airborne, Tactical, Railway, Industrial, Oil and Gas and Shipboard applications
  - ARINC 818, 10G Ethernet, Fibrechannel, 1x, 2x, 4x, 8x

**HOW TO ORDER**

FIGURE 1 - OUTLINE DRAWING CONTINUED (MARKING)

LABELING:

Each unit will be shipped in an antistatic bag. The label on the antistatic bag shall be at a minimum Arial size 10 black font and contain at a minimum the following information:

ANTISTATIC BAG LABEL:

Glenair  
Cage Code (06324)  
Part Number (PN 050-xxx as required)  
Date Code (DC xxxx)  
Serial Number (SN 123456)

Each unit will be marked, either with a label or laser engraving, as follows:

1. Marking font to be Arial, greater than .08 inches in height.
2. Minimum Marking on each part will include the following:
  - Glenair
  - Serial number
  - Glenair Part Number

Example Minimum Marking:

GLENAIR SN123456  
050-327-1-D

**FUNCTIONAL DESCRIPTION**

**TRANSMITTER SECTION**

**Transmit Disable (Tx\_Disable)**

The transmitter section of the transceiver accepts a TTL and CMOS compatible transmit disable control signal input that shuts down the transmitter optical output. A high signal disables the transmitter while a low signal allows normal transceiver operation. Also laser is disabled when TX\_Disable is open. In the event of a fault (e.g. eye safety circuit activated), cycling this control signal resets the module. An internal pull-down resistor enables the transceiver transmitter unless the host pulls the input high. Host systems should allow a 10ms interval between successive assertions of this control signal.

**Transmit Fault (Tx\_Fault)**

A catastrophic laser fault will activate the transmitter signal, TX\_FAULT, and disable the laser. This signal is an open collector output (pull-up required on the host board). A low signal indicates normal laser operation and a high signal indicates a fault. The TX\_FAULT will be latched high when a laser fault occurs and is cleared by toggling the TX\_DISABLE input or cycling the power of the transceiver. The transmitter fault condition can also be monitored via the 2-wire serial interface (address A2, byte 110, bit 2).

## Eye Safety Circuit

The Transmitter section provides Class 1 eye safety by design and is compliant with US FDA CDRH AEL Class 1 and EN(IEC) 60825-1,2, EN60950 Class 1. The eye safety circuit continuously monitors optical output power levels and will disable the transmitter and assert a TX\_FAULT signal upon detecting an unsafe condition. Such unsafe conditions can be created by inputs from the host board (Vcc fluctuation, unbalanced code) or faults within the module.

## RECEIVER SECTION

### Receiver Loss of Signal (LOS)

The Loss Of Signal (LOS) output indicates an unusable optical input power level. The post-amplification IC includes transition detection circuitry which monitors the ac level of incoming optical signals and provides a TTL/CMOS compatible status signal to the host. A low LOS logic level indicates the presence of an optical input while a high LOS logic level indicates an unusable optical input. The LOS thresholds are factory-set so that a high output indicates a definite optical fault has occurred (e.g. failed transmitter, broken or disconnected fiber connection to the transceiver, etc.). The LOS can also be monitored via the 2-wire serial interface (address A2h, byte 110, bit 1).

## FUNCTIONAL I/O

The PCB Mount transceiver accepts industry standard differential signals such as LVPECL and CML within the scope of the SFP MSA. To simplify board requirements, transmitter bias resistors and ac coupling capacitors are incorporated, per SFF-8074i, and hence are not required on the host board. The module is AC-coupled and internally terminated.

Figure 3 illustrates a recommended interface circuit to link the PCB Mount transceiver to the supporting Physical Layer integrated circuits.

The PCB Mount transceiver interfaces with the host circuit board through twenty I/O pins identified by function in Table 7. The transceiver high speed transmit and receive interfaces require SFP MSA compliant signal lines on the host board. The TX\_Disable, TX\_Fault, and RX\_LOS lines require TTL lines on the host board (per SFF-8074i) if used. If an application chooses not to take advantage of the functionality, TX\_Disable need to be tied to GND and TX\_Fault and RX\_LOS do not need to be connected.

### Digital Diagnostic Interface and Serial Identification (EEPROM)

The PCB Mount transceiver is compatible with the SFF-8074i SFP specification and with SFF-8472, the SFP specification for Digital Diagnostic Monitoring Interface. Both specifications can be found at <http://www.sffcommittee.org>.

050-327 Product Brief  
PCB Mount Transceiver  
10 Gbps, MMF, 3.3V

FIGURE 3 RECOMMENDED PCB MOUNT TRANSCEIVER HOST BOARD SCHEMATIC

The PCB Mount transceiver features EEPROM for Serial ID, which contains the product data stored for retrieval by host equipment. This data is accessed via the 2-wire serial EEPROM protocol of the ATMEL AT24C01A or similar, in compliance with the industry standard SFP Multi-Source Agreement. The base EEPROM memory, bytes 0-255 at memory address 0xA0, is organized in compliance with SFF-8074i. The I2C accessible memory page address 0xB0 is used internally by SFP for the test and diagnostic purposes and it is reserved.

As an enhancement to the conventional SFP interface defined in SFF-8074i, the PCB Mount Transceiver is compliant to SFF-8472 (digital diagnostic interface for optical transceivers). This new digital diagnostic information is stored in bytes 0-255 at memory address 0xA2. Using the 2-wire serial interface defined in the MSA, the PCB Mount Transceiver provides real time temperature, supply voltage, laser bias current, laser average output power and received input power. These parameters are internally calibrated, per the SFF-8472 MSA. The digital diagnostic interface also adds the capability to

**050-327 Product Brief  
PCB Mount Transceiver  
10 Gbps, MMF, 3.3V**

monitor for Transmitter Faults (TX\_FAULT), and monitor for Receiver Loss of Signal (RX\_LOS). The diagnostic information provides the opportunity for Predictive Failure Identification, Compliance Prediction, Fault Isolation and Component Monitoring.

#### Predictive Failure Identification

The predictive failure feature allows a host to identify potential link problems before system performance is impacted. Prior identification of link problems enables a host to service an application via “fail over” to a redundant link or replace a suspect device, maintaining system uptime in the process. For applications where ultra-high system uptime is required, the PCB Mount Transceiver provides a means to monitor two real-time laser metrics associated with observing laser degradation and predicting failure: average laser bias current (Tx\_Bias) and average laser optical power (Tx\_Power).

#### Compliance Prediction

Compliance prediction is the ability to determine if an optical transceiver is operating within its operating and environmental requirements. The PCB Mount Transceiver provide real-time access to transceiver internal supply voltage and temperature, allowing a host to identify potential component compliance issues. Received optical power is also available to assess compliance of fiber cable plant and remote transmitter. When operating out of requirements, the link cannot guarantee error free transmission.

#### Fault Isolation

The fault isolation feature allows a host to quickly pinpoint the location of a link failure, minimizing downtime. For optical links, the ability to identify a fault at a local device, remote device or cable plant is crucial to speeding service of an installation. PCB Mount Transceiver real-time monitors of Tx\_Bias, Tx\_Power, Vcc, Temperature and Rx\_Power can be used to assess local transceiver current operating conditions. In addition, status flag Rx Loss of Signal (LOS) is mirrored in memory and available via the two-wire serial interface.

#### Component Monitoring

Component evaluation is another use of the PCB Mount Transceiver real-time monitors of Tx\_Bias, Tx\_Power, Vcc, Temperature and Rx\_Power. Potential uses are as debugging aids for system installation and design, and transceiver parametric evaluation for factory or field qualification. For example, temperature per module can be observed in high density applications to facilitate thermal evaluation of systems that incorporate this PCB Mount transceiver

#### Required Host Board Components

A power supply noise rejection filter as describe in SFP MSA is required on the host PCB to meet data sheet performance. This is the same filter incorporates an inductor which should be rated 400 mADC and 1  $\Omega$  series resistance or better. It should not be replaced with a ferrite. The required filter is illustrated in Figure 4. Also, the host PCB for the PCB Mount transceiver requires 4.7 K to 10 K $\Omega$  pull-up resistors for TX\_FAULT, LOS, SCA and SDL lines.

**050-327 Product Brief  
PCB Mount Transceiver  
10 Gbps, MMF, 3.3V**

Application Support

To assist in the transceiver design and evaluation process, Glenair offers the following aids:

- Evaluation board & Product Manual, part number 050-329, which facilitates in the testing of the PCB Mount transceiver.
- 3D Step file to support modeling of mechanical fit and routing
- PADS schematic and PCB layout library files that can be exported into customer's PCB software design program
- Applications Aid Example of PCB layout including details of high speed transmission designs

Customer Manufacturing Processes

This module is mounted with screws and interfaces with a high-speed low cost surface mount electrical connector residing on the host PC board. The PCB Mount transceiver is not designed for aqueous wash, IR reflow, or wave soldering processes and should be mounted on the host board after host PC board has been through its assembly process.

**TABLE 10** TRANSCEIVER DIGITAL DIAGNOSTIC MONITOR CHARACTERISTICS (WHEN APPLICABLE)

PARAMETER	SYMBOL	MIN.	UNITS	NOTES
Transceiver Internal Temperature Accuracy	TINT	±3.0	°C	Temperature is measured internal to the transceiver and is valid from -40°C to +85 °C case temperature
Transceiver internal Supply Voltage accuracy	VINT	±0.1	V	Supply voltage is measured internal to the transceiver and can, with less accuracy, be correlated to the voltage at the Vcc pin. Valid over 3.3V ±5%
Transmitter Laser DC Bias Current Accuracy	IINT	±10	%	
Transmitted Average Optical Output Power Accuracy	PT	±3.0	dB	Coupled into 50/125 mm MM fiber. Valid from -1dBm to -10dBm
Received Average Optical Input Power Accuracy	PR	±3.0	dB	Coupled from 50/125 mm MM fiber. Valid from -24 dBm to - 1 dBm

050-327 Product Brief  
PCB Mount Transceiver  
10 Gbps, MMF, 3.3V

**ACCESSORIES**

**Fiber Optic Jumper Cables to support connection to Mil/Aerospace Connectors**

KEY FEATURES:

- Jumper cable between Glenair Transceiver (end A) and Mil/Aero Connector termini (End B)
- Offered with either Multimode and Single Mode fibers

**FIGURE 5**  
Fiber Optic Jumper Cable Assembly (see separate Glenair sales drawing FA02454 for details)

**PCB Threaded Inserts, PN 059-0007**

KEY FEATURES

- Simplifies installation of PCB Mount transceivers eliminating the need for washers and nuts
- Soldered to PCB to eliminate need for handling nuts during assembly
- Existing Options to support PCB thickness from 0.03" to 0.92"
- Can support thicker PCB if required

**EVALUATION Boards, PN 050-329, Include**

- MANUAL with test block diagram, schematic and
- Evaluation board PCBA
- 2 fiber optic cables (~1m MMF, GC connector to LC connector)
