

### Product Overview

The QPB3311 is an HBT single ended RF amplifier IC operating as return path amplifier capable of supporting DOCSIS 3.1 applications. This IC is designed to provide a low noise, high gain option for 5-210MHz interface using an 8V power supply to provide lower overall power dissipation. 5V operation is possible in applications with reduced linearity and gain requirements. The QPB3311 is packaged in a convenient SOIC8 package and features an externally adjustable bias control.

Package: SOIC-8 with Exposed Pad

## Recommended Mounting Pattern

**Notes:**

1. All dimensions are in millimeters. Angles are in degrees.
2. Use 1oz. copper minimum for top and bottom layers
3. Vias are required under the backside paddle for proper RF/DC grounding and thermal dissipation. We recommend a 0.35mm (#80/0.135") diameter bit for drilling via holes and a final plated through diameter of 0.25mm (0.010").
4. Ensure good backside paddle solder attach for reliable operation and best electrical performance.
