Demo 3 Evaluation Board Overview

The Demo 3 Baseboard is used to connect to headboards and interface with a host PC in order to demonstrate the features of ON Semiconductor's image sensor products.

Features

- High-Bandwidth USB 3.0 Interface
- Altera Arria II GX FPGA
- HDMI® Transmitter
- 1GB Memory Buffer
- Up to 4-Lane MIPI and HiSPi Interfaces
- CCP and Parallel Interfaces
- I²C Control Unit

Demo 3 Baseboard Function Overview

The Demo 3's FPGA, Altera's EP2AGX45DF25C4N, provides an interface between ON Semiconductor imaging sensors and the Cypress FX3 USB 3.0 controller. An

external SPI EPROM contains the programming file for the FPGA. The EPROM is configurable using the FX3 SPI master interface. The FPGA has a memory controller block that controls data from the on-board DDR3 SDRAM.

Figure 5. FPGA Block Diagram

FPGA Frame Buffer

The 1Gb frame buffer using a 64Mbx16 matches data rates between the sensor and FX3 interfaces. It is sized to buffer 3 frames of a 20-Megapixel sensor. There is a triple-buffer to help minimize frame loss. The frame buffer has two principal operating modes that support either self-timed operation or direct interface to the FX3 at HDMI video output of 720p 60 or 1080p 60 frame rates. The frame buffer controller runs at 150 MHz FPGA core clock with peak available bandwidth at 750-Megapixels/second, peak input bandwidth of 400-Megapixels/second, and peak output bandwidth of 200-Megapixels/second. The frame buffer can be configured to operate as a frame capture device, with the entire buffer filled prior to sending data to the FX3 interface.

Receivers and Data Rates

The FPGA receives data through MIPI, HiSpi, CCP, and parallel interfaces. Each of these receiver blocks has an output FIFO that moves data from the receiver clock to the 150 MHz FPGA core clock.

MIPI Receiver:

The MIPI receiver handles 4 lanes of data at a maximum data rate of 768 Mbps/lane. The signal pairs use both single-ended and differential signaling with accordance to the MIPI Alliance Specification for D-PHY v.1.00.00.

HiSpi Receiver:

The HiSpi receiver supports high-speed transmission of image sensor data, operating at 1 Gbps per data lane. It is a unidirectional differential serial interface with four data lanes and one DDR clock lane. It supports Streaming-S, Streaming-SP, and Packetized SP protocols that conform to the HiSpi protocol specification v.1.50.00.

CCP Receiver:

The CCP receiver is a single-lane data interface that supports 8-, 10-, or 12-bit raw data. It operates with a maximum serial data rate of at least 640 Mbps. The receiver conforms to the SMIA CCP2 1.0 specification.

Parallel Receiver:

The parallel receiver allows asynchronous switching between driven and high-Z under pin or register control. The receiver supports 10 or 12 bits of data, running at a pixel rate of at least 125 MHz.

HDMI Transmitter

The HDMI transmitter utilizes the ADV7526 chip by Analog Devices to transmit HDMI 34-bit data to the output port. The HDMI interface supports the HDMI 1.4 standard with 12-bit deep color. It supports RGB and YCbCr digital video input. The I²C device address is 0x72 and accesses registers inside the HDMI transmitter block.

AGB1N0CS–GEVK

FX3 USB 3.0 Interface

The Cypress FX3 has a 32-bit data interface that is transceived to the differential I/O pins on the transmitters/receivers of the FPGA. The maximum data rate of the interface is 5 Gb/s.

I²C Control Bus

The I²C control bus supports 32-bit wide GPIF II data bus and supports 14 configurable control pins. The control bus supports bus frequencies of 100 kHz, 400 kHz, and 1 MHz. Operational mode control is done through software configuration using the I²C interface from the controller. The I²C HDMI chip address is 0x72, and clock generator address is 0xD2. The system EEPROM is 0xA0 and t is configurable up to 0xAx using software.

Interfacing to Demo 3 Headboard

The headboard connector has a serial sensor data input interface, I²C control interface, power input, and parallel image data interface.

HiSPi Interface

The High Speed Serial Pixel (HiSPi) interface uses four differential data lanes and one differential clock as output and it is unidirectional. In HiSPi mode, 12- or 14-bit compressed, or 16-bit linearized data may be output. Only linear mode is supported on this interface. The HiSPi interface supports three protocols: Streaming–S, Streaming–SP, and Packetized SP.

MIPI Interface

The MIPI interface implements a serial differential sub-LVDS transmitter that supports multiple formats, error checking, and custom short packets. The interface is designed to MIPI D–PHY v1.0. When the sensor is in software standby system state, the MIPI signals enter ultra low-power state according to their nominal 0 V levels.

Serial LVDS Interface

The serial LVDS (low-voltage differential signal) interface uses four differential data lanes and one differential clock as output and it is unidirectional. In Serial LVDS mode, 8- or 10-bit compressed, or 12-bit linearized data may be output. Only linear mode is supported on this interface.

Parallel Interface

The parallel mode interface outputs 10- or 12-bit raw data for linear mode and 10- or 12-bit compressed data in High Dynamic Range, depending on the board. In this mode, FRAME_VALID and LINE_VALID signals are output on dedicated pins, along with a synchronized pixel clock two-wire serial interface.

Two-Wire Serial Interface

Some boards support a two-wire serial interface. The interface supports two modes of operation: 100 kHz for Standard mode, and 400 kHz for High-speed mode.

Table 1. 52-PIN CONNECTOR TO HEADBOARD FUNCTION DESCRIPTION (P5)

| Pin | Name | Description | DIR | Comment |
|-----|-------------|---------------------------------|-----|------------------------------|
| 1 | MH_DATA1_P | MIPI/HiSPi Data1+ | Out | MIPI/HiSPi Data1+ Signal |
| 2 | MH_DATA2_P | MIPI/HiSPi Data2+ | Out | MIPI/HiSPi Data2+ Signal |
| 3 | MH_DATA1_N | MIPI/HiSPi Data1– | Out | MIPI/HiSPi Data1– Signal |
| 4 | MH_DATA2_N | MIPI/HiSPi Data2– | Out | MIPI/HiSPi Data2– Signal |
| 5 | S_RESERVED1 | General Reserved Signal 1 | Out | Signal @ +3.3 V Level |
