

# FUSETRON Energy Efficient Dual-Element, Time-Delay Fuses Class RK5 – 600 Volt

**FRS-R**  
**1/10-60A**

## Dimensions - in

## Catalog Symbol: FRS-R

Current-limiting

Dual-element, time-delay – 10 second (minimum) at 500% rated current

## Ratings:

Volts – 600Vac (or less)

Amps – 1/10-30A

IR – 200kA RMS Sym.

– 20kA @300Vdc

Amps – 35-60A

IR – 200kA RMS Sym.

– 20kA @250Vdc

## Agency Information:

CE, UL Listed, Std. 248-12, Class RK5, Guide JDDZ, File E4273  
CSA Certified, C22.2 No. 248.12, Class 1422-02, File 53787

## General Information:

- Provides motor overload, ground fault and short-circuit protection. When used in circuits subject to surge currents such as those caused by motors, transformers and other inductive components, these fuses can be sized close to full-load amps to give maximum overcurrent protection.
- Permits the use of smaller and less costly switches. The time-delay feature makes it possible to use fuse amp ratings which are much smaller than those of non-time-delay fuses. Considerable cost saving occurs by permitting the use of smaller size switches, panels and fuses themselves.
- Provides a higher degree of short-circuit protection (greater current-limitation) in circuits in which surge currents or temporary overloads occur.
- Helps protect motors against burnout from overloads.
- Gives motor running back-up protection to motors without extra costs.
- Helps protect motors against burnout from single phasing on three phase systems.
- Simplifies and improves blackout prevention (selective coordination).
- Dual-element fuses can be applied in circuits subject to temporary motor overloads and surge currents to provide both high-performance, short-circuit and overload protection.
- The overload element provides protection against low level overcurrent of overloads and will hold an overload which is five times greater than the amp rating of the fuse for a minimum of ten seconds.
