

LTC2756
Serial 18-Bit SoftSpan I_{OUT} DAC

DESCRIPTION

Demonstration circuit 1792A features the LTC2756 18-bit SoftSpan™, I_{OUT} DAC. The digital interface is a simple, 4-wire Serial Peripheral Interface (SPI) interface, augmented with separate $\overline{\text{CLEAR}}$ and $\overline{\text{LDAC}}$ pins that reset the output to zero and load the DAC code, respectively. This device features six output ranges: 0V to 5V, 0V to 10V, $\pm 5\text{V}$, $\pm 10\text{V}$, $\pm 2.5\text{V}$, and -2.5V to 7.5V. These ranges are programmable through the SPI interface or through

separate span control pins if SoftSpan operation is not needed. Voltage input offset and gain adjustment pins facilitate trimming of residual DC errors without impacting the excellent temperature stability of this device.

Design files for this circuit board are available at <http://www.linear.com/demo>

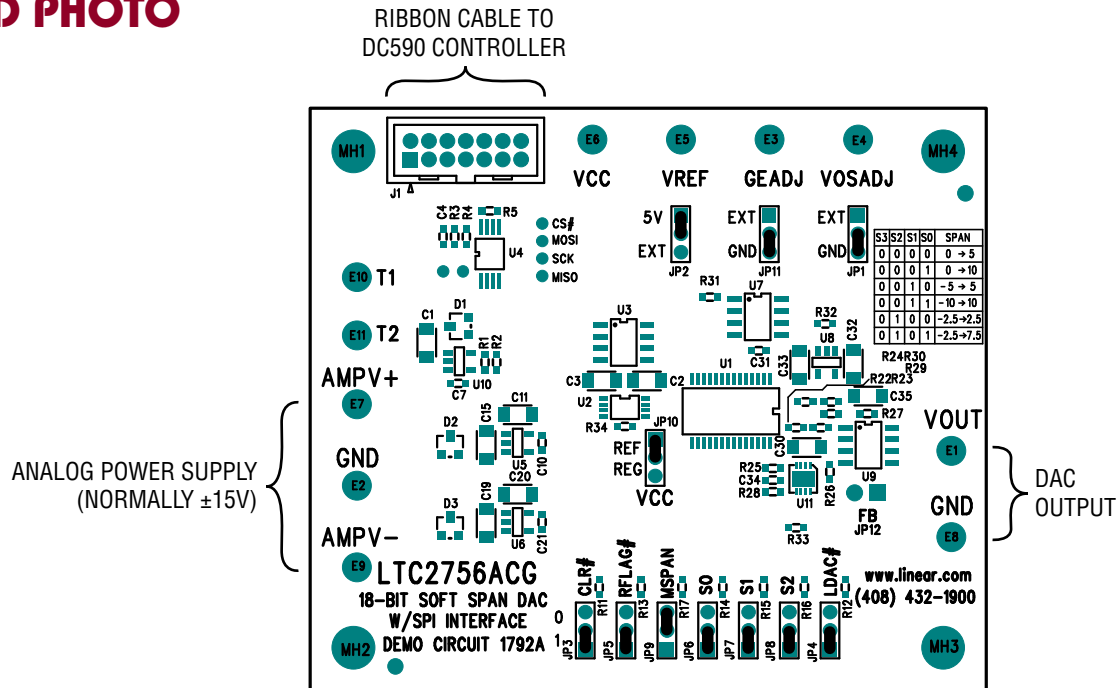

Figure 1. Connection Diagram

QUICK START PROCEDURE

Connect a low noise $\pm 15V$ power supply to the AMPV⁺ and AMPV⁻ turret posts at the left side of the DC1792A board. Connect J1 to a DC590 USB serial controller using the supplied 14-conductor ribbon cable. Connect DC590 to a host PC with a standard USB A/B cable. Run the evaluation software supplied with the DC590, or download it from www.linear.com/software. The correct control panel will be loaded automatically, shown in

Figure 2. The software automatically sets the LTC2756 outputs according to the entries in the control panel. A square wave option is available to test settling time. MSPAN jumper should be set to 0 if software span control is desired. Setting MSPAN high (1) causes the S2, S1, S0 pins to set the span according to the table printed on the board, and the corresponding span should be selected in software to ensure that the calculated DAC code is correct.

QUICK START PROCEDURE

Additional software documentation may be available from the Help menu item, as features may be added periodically.

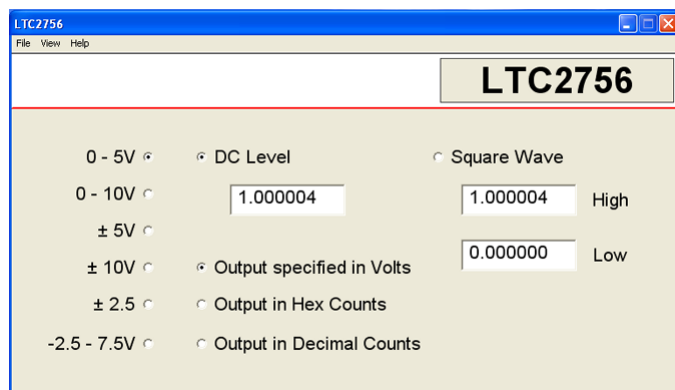

Figure 2. Software Screenshot

HARDWARE SET-UP

Jumpers

MSPAN: Manual Span Control Pin. MSPAN is used to configure the LTC2756 for operation in a single, fixed output range. If MSPAN is 1 (high) it will be configured for single span use. If MSPAN is low it will be set through the QuikEval™ Software. Default position is 0 (low).

S0, S1, S2: Used to set the fixed output range if MSPAN is 1 (high).

Table 1. MSPAN Configuration

S2	S1	S0	SPAN
0	0	0	0V to 5V
0	0	1	0V to 10V
0	1	0	±5V
0	1	1	±10V
1	0	0	±2.5V
1	0	1	-2.5V to 7.5V

GEADJ: Gain Adjust Pin. If no adjustments are required, select GND. Selecting EXT. connects the pin to the turret allowing external adjustment to null gain error or compensate for reference errors.

VOSADJ: Offset Adjustment Selection for DAC. If no offset adjustment is required, select GND. Selecting EXT connects the offset pin to the turret allowing external adjustment of offset.

V_{CC}: Select source for 5V V_{CC} supply. Set to 5V for supply by onboard LTC6655 reference (recommended). Set to REG to be supplied by regulated supply from DC590 Controller and remove the jumper to supply externally.

V_{REF}: Select source for reference. Set to 5V to use onboard LTC6655 reference or select EXT to drive externally through the V_{REF} jumper.

CLR: Asynchronous Clear Input. Tie to 0 to set all DAC outputs to 0V.

LDAC: Asynchronous DAC Load Input. Tie to 0 to update all DACs if $\overline{\text{CS}}$ is high.

RFLAG: Reset Flag Output. Remove jumper and probe middle pin for RFLAG status.

Analog Connections (Turret Posts)

V_{OUT}: DAC Voltage Output.

V_{REF}: DAC Reference Voltage. If the onboard LTC6655 reference is selected, the voltage may be measured at these points. If a remote reference is selected, then an external reference must be applied to these points.

VOSADJ: DAC offset adjust input, use only if VOSA jumper set to EXT. Nominal input range is ±5V, which will provide ±2048LSB of offset adjustment.

GEADJ: Gain Adjust Pin. This voltage control pin can be used to null gain error or to compensate for reference errors. The gain error change expressed in LSB is the same for any output range. Nominal range is ±5V, which will provide ±2048LSB of gain adjustment.

Power and Ground Connections

Analog Power: AMPV⁺, AMPV⁻, and GND turret posts are the analog supplies for the onboard DAC amplifiers. These should be connected to a well regulated, low noise ±15V power supply.

V_{CC}: Connection to V_{CC}. See schematic and description for V_{CC} jumper.

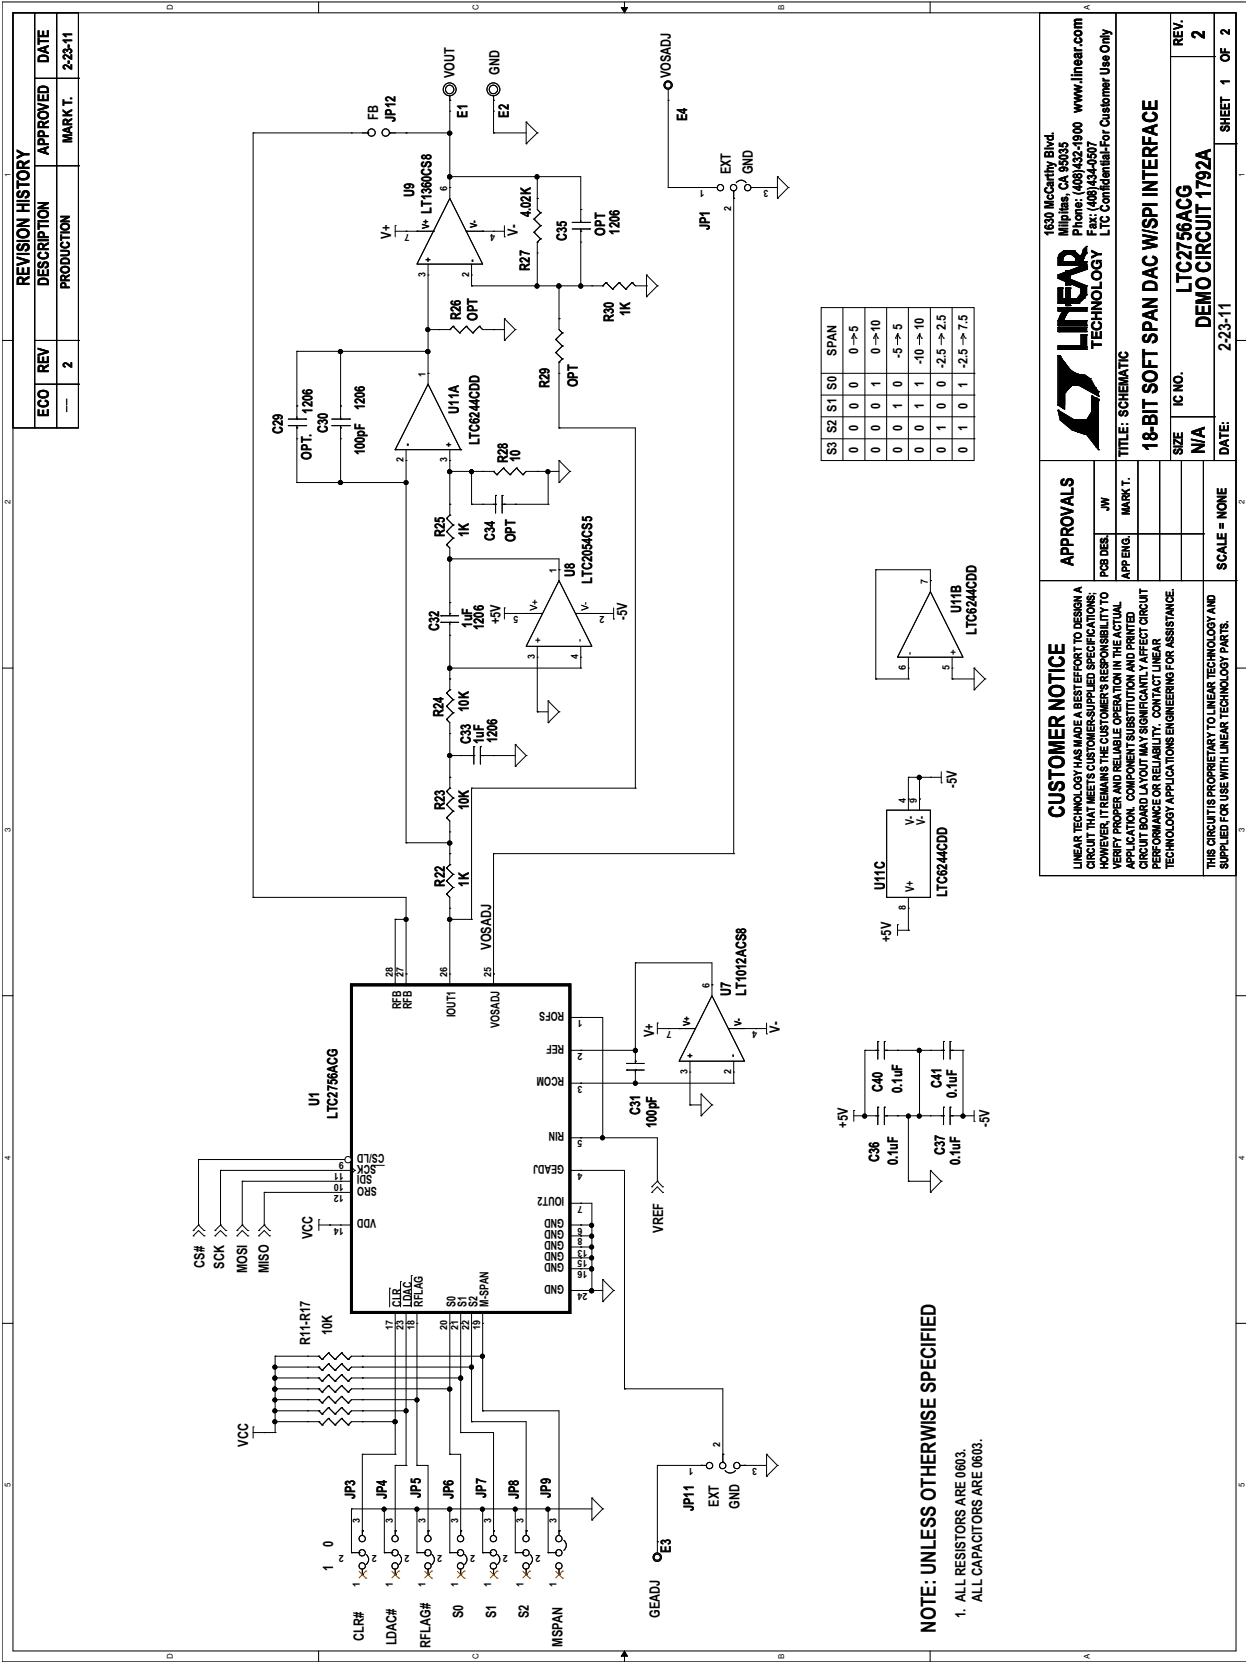

Grounding: Separate power and signal grounds are provided. Signal GND is the turret closest to V_{OUT}, use this for measurement ground and output return. Power GND is between AMPV⁺ and AMPV⁻ turrets.

PARTS LIST

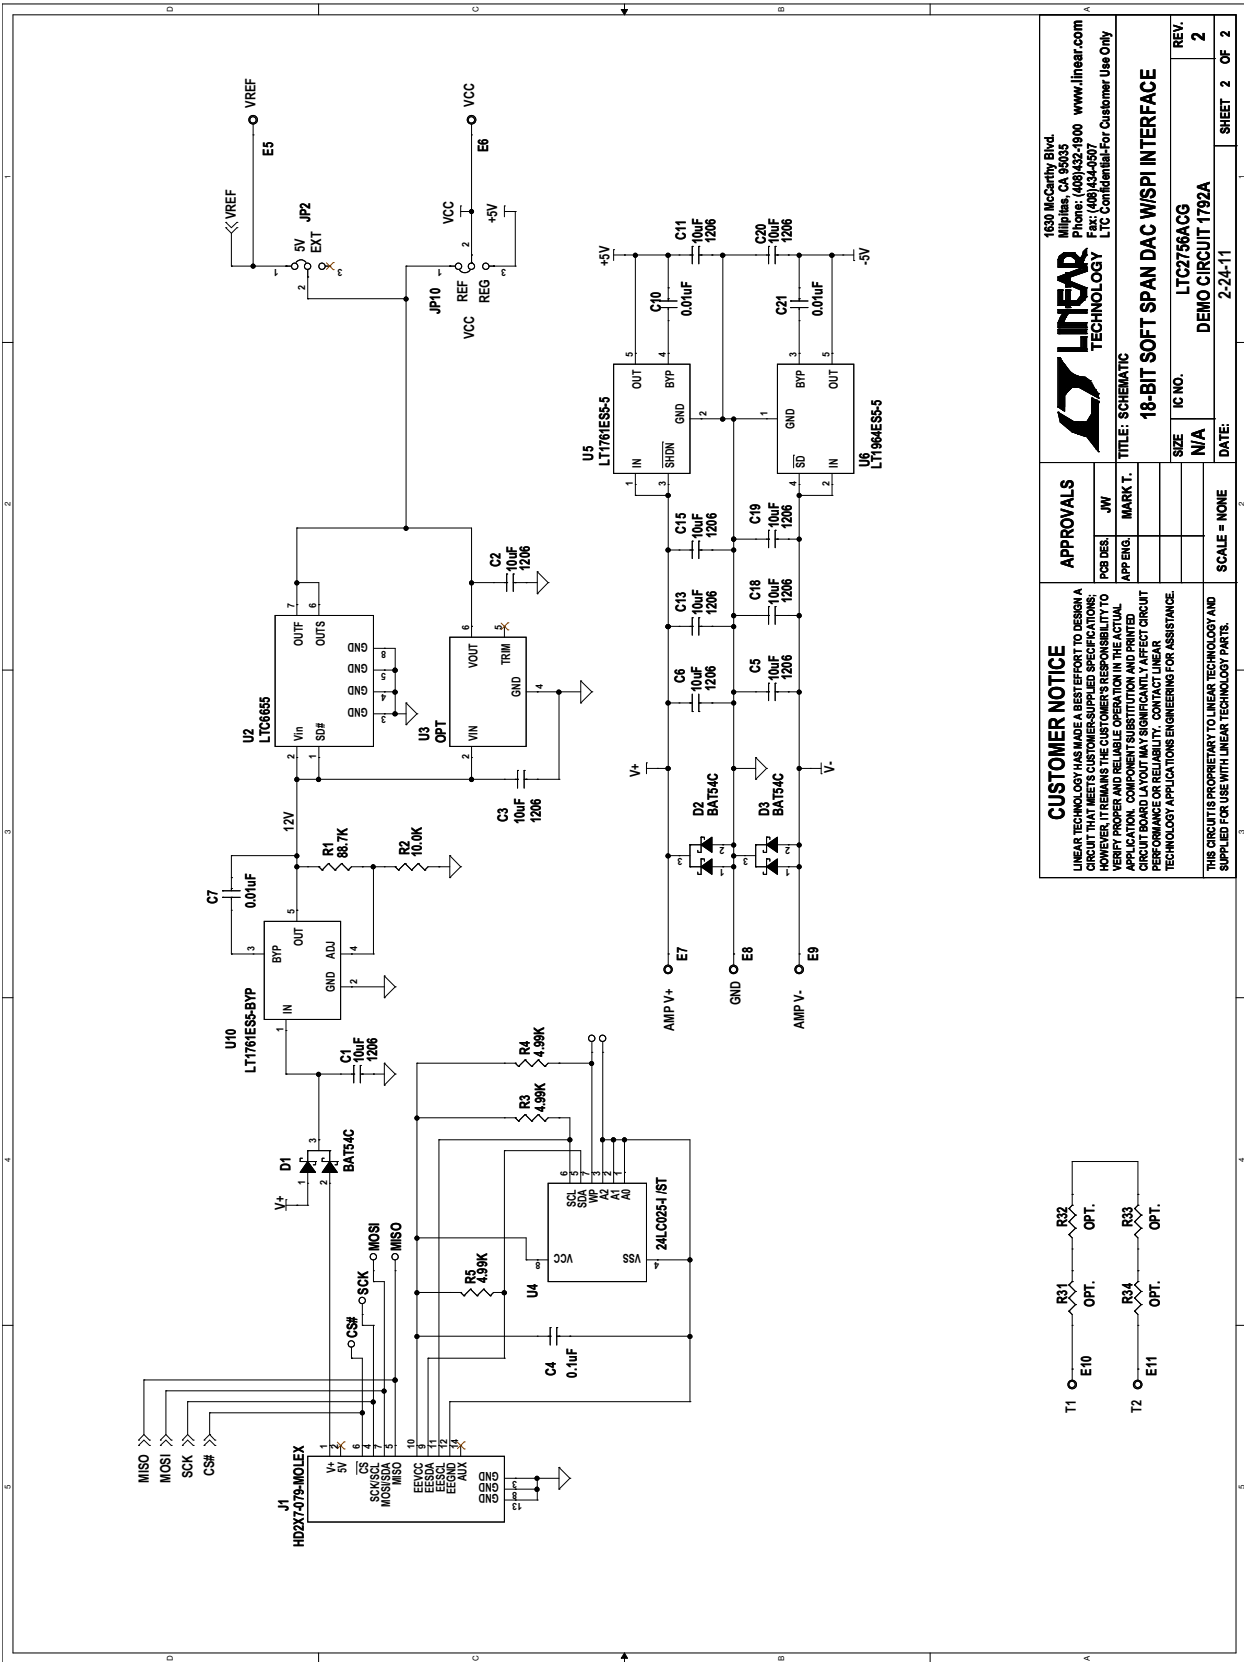

ITEM	QTY	REFERENCE	PART DESCRIPTION	MANUFACTURER/PART NUMBER

DEMO MANUAL DC1792A

DEMONSTRATION BOARD IMPORTANT NOTICE

Linear Technology Corporation (LTC) provides the enclosed product(s) under the following **AS IS** conditions:

This demonstration board (DEMO BOARD) kit being sold or provided by Linear Technology is intended for use for **ENGINEERING DEVELOPMENT OR EVALUATION PURPOSES ONLY** and is not provided by LTC for commercial use. As such, the DEMO BOARD herein may not be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including but not limited to product safety measures typically found in finished commercial goods. As a prototype, this product does not fall within the scope of the European Union directive on electromagnetic compatibility and therefore may or may not meet the technical requirements of the directive, or other regulations.

If this evaluation kit does not meet the specifications recited in the DEMO BOARD manual the kit may be returned within 30 days from the date of delivery for a full refund. THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY THE SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. EXCEPT TO THE EXTENT OF THIS INDEMNITY, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user releases LTC from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge. Also be aware that the products herein may not be regulatory compliant or agency certified (FCC, UL, CE, etc.).

No License is granted under any patent right or other intellectual property whatsoever. **LTC assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or any other intellectual property rights of any kind.**

LTC currently services a variety of customers for products around the world, and therefore this transaction **is not exclusive**.

Please read the DEMO BOARD manual prior to handling the product. Persons handling this product must have electronics training and observe good laboratory practice standards. **Common sense is encouraged.**

This notice contains important safety information about temperatures and voltages. For further safety concerns, please contact a LTC application engineer.
