TGA4826-SM

10 Vpp 15 Gbps Optical Modulator Driver

Applications

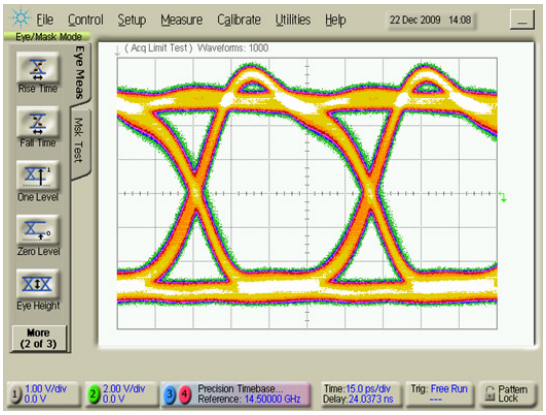
- Mach-Zehnder Modulator Driver for Metro and Long Haul Optical Networks

Product Features

- 9 – 18 Gbps operation
- 3 -10 Vpp Output Voltage
- Gain: 22 dB
- Single-ended Input / Output
- Low Power Dissipation < 1.6 W
- Bias: Vd = 7 V, Id = 280 mA, Vctrl = +0.4 V, Vg = -0.5 V Typical for operation
- Package Dimensions: 6 x 6 x 1.6 mm

Typical Electrical Eye

Vd = 7 V, Id = 280 mA, Vctrl = 0.4 V, Vg = -0.5 V
Vin = 1.5 Vpp, 14.5 Gbps



General Description

The TriQuint TGA4826-SM is an addition to TriQuint's portfolio of optical driver amplifiers suitable for a variety of optical network applications.

The TGA4826-SM is a high power wideband amplifier that typically provides 22 dB small signal gain. The TGA4826-SM is an excellent choice for applications requiring high drive combined with high linearity. The TGA4826-SM can be used as a gain block when Vdbypass is used, or alternatively, can deliver up to 10 Vpp when Vd is biased through an external bias tee through the RFout line.

The TGA4826-SM requires an RF choke, DC blocks &/or bias tees, if required, and control circuitry.

RoHS and Lead-Free compliant. MSL1 per IPC/JEDEC J-STD-020C. Evaluation boards available on request.

Typical S-Parameters

Vd = 7 V, Id = 280 mA, Vctrl = 0.4 V, Vg = -0.5 V
