Description

CAT5110/18/19/23/24/25 linear-taper digital POTs perform the same function as a mechanical potentiometer or a variable resistor. These devices consist of a fixed resistor and a wiper contact with 32-tap points that are digitally controlled through a 2-wire up/down serial interface.

The CAT5110 and CAT5125 are configured as potentiometers. The CAT5118/19/23/24 are configured as variable resistors.

Three resistance values are available: 10 kΩ, 50 kΩ and 100 kΩ. All devices are available in space-saving 5-pin and 6-pin SOT−23 packages. The CAT5110/18/19 are also available in the SC−70 package.

Features

- 0.3 μA Ultra-low Standby Current
- Single-supply Operation: 2.7 V to 5.5 V
- Glitchless Switching between Resistor Taps
- Power-on Reset to Midscale
- 2-wire Up/Down Serial Interface
- Resistance Values: 10 kΩ, 50 kΩ and 100 kΩ
- Low Wiper Resistance: 80 Ω for CAT5123, CAT5124, CAT5125
- CAT5110, CAT5118, CAT5119 Available in SC−70
- These Devices are Pb-Free, Halogen Free/BFR Free and are RoHS Compliant

Applications

- LCD Screen Adjustment
- Volume Control
- Mechanical Potentiometer Replacement
- Gain Adjustment
- Line Impedance Matching

PIN CONNECTIONS

ORDERING INFORMATION

See detailed ordering and shipping information in the package dimensions section on page 7 of this data sheet.

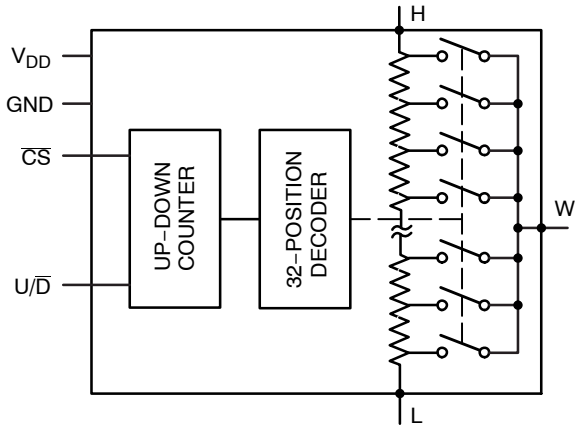

Figure 1. Functional Diagram

Table 1. PIN DESCRIPTIONS

Pin Number			Pin Name	Description
CAT5110/ CAT5125	CAT5118/ CAT5123	CAT5119/ CAT5124		
1	1	1	V_{DD}	Power Supply
2	2	2	GND	Ground
3	3	3	U/$\overline{D}$	Up/$\overline{Down}$ Control Input. With $\overline{CS}$ low, a low-to-high transition increments or decrements the wiper position.
4	4	4	$\overline{CS}$	Chip Select Input. A high-to-low $\overline{CS}$ transition determines the mode: increment if U/$\overline{D}$ is high, or decrement if U/$\overline{D}$ is low.
–	–	5	L	Low Terminal of Resistor
5	–	–	W	Wiper Terminal of Resistor
6	6	6	H	High Terminal of Resistor

Table 2. ABSOLUTE MAXIMUM RATINGS

Parameters	Ratings	Units
V_{DD} to GND	−0.3 to +6	V
All Other Pins to GND	−0.3 to (V_{DD} + 0.3)	V
Input and Output Latch−Up Immunity	±200	mA
Maximum Continuous Current into H, L and W 100 kΩ 50 kΩ 10 kΩ	 ±0.6 ±1.3 ±1.3	mA
Continuous Power Dissipation (T_A = +70°C) 5-pin SC−70 (Note 1) 6-pin SC−70 (Note 1)	 247 245	mW
Operating Temperature Range	−40 to +85	°C
Junction Temperature	+150	°C
Storage Temperature Range	−65 to +150	°C
Soldering Temperature (soldering, 10 sec)	+300	°C

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

1. Derate 3.1 mW/°C above T_A = +70°C

Table 3. ELECTRICAL CHARACTERISTICS
(V_{DD} = 2.7 V to 5.5 V, $V_H = V_{DD}$, V_L = 0, T_A = −40°C to +85°C. Typical values are at V_{DD} = 2.7 V, T_A = 25°C, unless otherwise noted.)

Parameter	Symbol	Conditions	Min	Typ	Max	Units
DC PERFORMANCE						
Resolution			32			Taps
End-to-End Resistance (−00)			80	100	120	kΩ
End-to-End Resistance (−50)			40	50	60	
End-to-End Resistance (−10)			8	10	12	
End-to-End Resistance Tempco	TC_R	CAT5110/18/19		200		ppm/°C

FUNCTIONAL DESCRIPTION

The CAT5110/5118/5119/5123/5124/5125 consist of a fixed resistor and a wiper contact with 32−tap points that are digitally controlled through a 2-wire up/down serial interface. Three end-to-end resistance values are available: 10 kΩ, 50 kΩ and 100 kΩ.

The CAT5110/5125 is designed to operate as a potentiometer. In this configuration, the low terminal of the resistor array is connected to ground (pin 2).

The CAT5118/5123 performs as a variable resistor. In this device, the wiper terminal and high terminal of the resistor array are connected at pin 5. The CAT5119/5124 is a similar variable resistor, except the low terminal is connected to pin 5.

Digital Interface Operation

The devices have two modes of operation when the serial interface is active: increment and decrement mode. The serial interface is only active when $\overline{CS}$ is low.

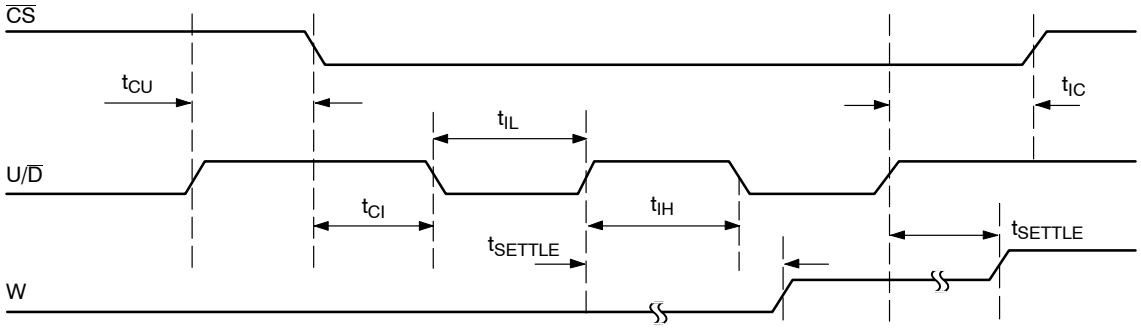
The $\overline{CS}$ and U/$\overline{D}$ inputs control the position of the wiper along the resistor array. When $\overline{CS}$ transitions from high to low, the part will go into increment mode if U/$\overline{D}$ input is high, and into decrement mode when U/$\overline{D}$ input is low. Once the mode is set, the device will remain in that mode until $\overline{CS}$ goes high again. A low-to-high transition at the U/$\overline{D}$ pin will increment or decrement the wiper position depending on the current mode (Figures 7 and 8).

When the $\overline{CS}$ input transitions to high (serial interface inactive), the value of the counter is stored and the wiper position is maintained.

Note that when the wiper reaches the maximum (or minimum) tap position, the wiper will not wrap around to the minimum (or maximum) position.

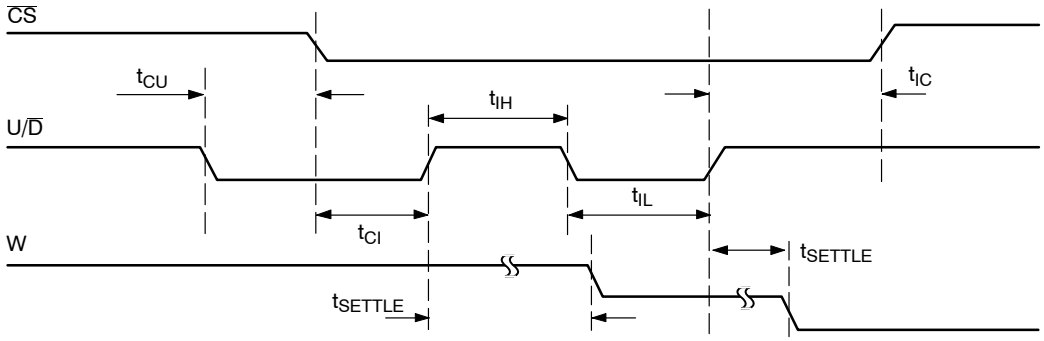
Power-On Reset

All parts in this family feature power-on reset (POR) circuitry that sets the wiper position to midscale at power-up. By default, the chip is in the increment mode.



Note: “W” is not a digital signal. It represents wiper transitions.

Figure 7. Serial Interface Timing Diagram, Increment Mode



Note: “W” is not a digital signal. It represents wiper transitions.

Figure 8. Serial Interface Timing Diagram, Decrement Mode

APPLICATIONS INFORMATION

The devices are intended for circuits requiring digitally controlled adjustable resistance, such as LCD contrast control, where voltage biasing adjusts the display contrast.

Alternative Positive LCD Bias Control

An op amp can be used to provide buffering and gain on the output of the CAT5110/CAT5125. This can be done by connecting the wiper output to the positive input of a noninverting op amp as shown in Figure 9. Figure 10 shows a similar circuit for the CAT5119/CAT5124.

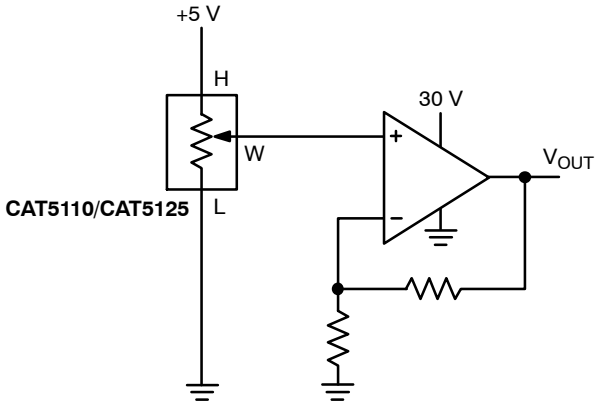


Figure 9. Positive LCD Bias Control

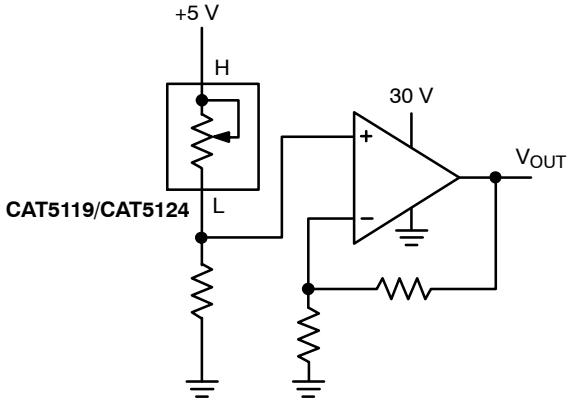

Figure 10. Positive LCD Bias Control

Adjustable Gain

Figures 11 and 12 show how to use either a variable resistor or a potentiometer to digitally adjust the gain of a noninverting op amp configuration, by connecting the devices in series with a resistor to ground. The devices have a low 5 ppm/°C ratiometric tempco that allows for a very stable adjustable gain configuration over temperature.
