Acceleration loop powered sensors with dynamic vibration output
PC420A-Dz dual output series

Wilcoxon's 4-20 mA vibration sensors integrate easily with an existing PLC, DCS or SCADA system. The PC420A-Dz series dual output sensors provide 24/7 monitoring of overall machine vibration for continuous trending, alerting users to changing machine conditions and helping to guide maintenance in prioritizing the need for service. The choice of true RMS, true peak or peak output allows you to choose the sensor that best fits your industrial requirements. The 4-20 mA output of the PC420A series is proportional to acceleration vibration. The dynamic output signal is derived from an internal buffered amplifier and requires that the 4-20 mA loop be powered.

Table 1: PC420Ax-yy-Dz dual output model selection guide

x (4-20 mA output type)	yy (4-20 mA full scale)	z (dynamic scale)
R = RMS output	05 = 5 g (49 m/sec^2)	A = acceleration, 100 mV/g
P = calculated peak output	10 = 10 g (98 m/sec^2)	V = velocity, 100 mV/ips
TP = true peak output	20 = 20 g (196 m/sec^2)	

Key features

- Choice of peak equivalent, true RMS or true peak output
- Dynamic signal output
- Easily integrated into existing process control systems
- Manufactured in an approved ISO 9001 facility

Notes: [1] Maximum loop resistance (R_L) can be calculated by:

$$R_L = \frac{V_{DC\ power} - 10\ V}{20\ mA}$$

DC supply voltage	R_L (max resistance)[2]	R_L (minimum wattage capability)[3]
12 VDC	100 Ω	1/8 watt
20 VDC	500 Ω	1/4 watt
24 VDC	700 Ω	1/2 watt
26 VDC	800 Ω	1/2 watt
30 VDC	1,000 Ω	1/2 watt

[2] Lower resistance is allowed, greater than 10 Ω recommended.

[3] Minimum R_L wattage determined by: $(0.0004 \times R_L)$.
