

Features

1GHz-5GHz Range

Standard 3 Wire Interface

Small layout 0.6" x 0.6"

Applications

Digital Radio Equipment

Fixed Wireless Access

Satellite Communications Systems

Base Stations

Personal Communications Systems

Portable Radios

Test Instruments

Wireless Infrastructure

The CPLL66 is a complete PLL/Synthesizer needing only an external frequency reference and supply voltages for the internal PLL (phase lock loop) and VCO (voltage controlled oscillator). The Crystek CPLL66 is programmed using a standard three line interface (Data, Clock and Load Enable).

The newly introduced CPLL66 family has been initially released to cover 1GHz to 5GHz in bands. It is housed in a compact 0.6-in. x 0.6-in. x 0.15-in. SMD package which saves board space. Typical phase noise at 4GHz is -90dBc/Hz at 10KHz offset with 0dBm minimum output power.

Programming Guide for CPLL66-XXXX

Introduction

The CPLL66 uses a simple 3 wire interface to program four internal registers. See Figure 1.

Figure 1. Timing Diagram

There are four 24 bit registers that need to be programmed. Which register is written into is simply controlled by Control Bits C1 and C2. Table I summarizes the Truth Table for Control Bits C1 and C2.

Table I. C2, C1 Truth Table

| Control Bits | | Data Latch |
|--------------|----|--------------------------------------|
| C2 | C1 | |
| 0 | 0 | R Counter |
| 0 | 1 | N Counter (A and B) |
| 1 | 0 | Function Latch (Including Prescaler) |
| 1 | 1 | Initialization Latch |

Table II shows the details of the four 24 bit registers.

Table II. Latch Summary

REFERENCE COUNTER LATCH

| RESERVED | | | LOCK DETECT PRECISION | TEST MODE BITS | | ANTI- BACKLASH WIDTH | | 14-BIT REFERENCE COUNTER | | | | | | | | | | | | | CONTROL BITS | | |
|----------|------|------|-----------------------------|-------------------|------|----------------------------|------|--------------------------|------|------|------|------|------|------|-----|-----|-----|-----|-----|-----|-----------------|--------|--------|

When using the CPLL66 family in a synthesizer application, all four 24 bit registers need to be written into after power-up. After writing all four latches the first time, subsequent frequency step changes can be accomplished by changing the N Counter Latch only.

Programming Crystek p/n: CPLL66-4240-4240

The following is specific programming for CPLL66-4240-4240 (4.240GHz fixed freq. with 2500KHz Step Size and 10MHz input reference frequency).

Program all three registers with the following:

Function Latch: 9F8083 H
N Counter Latch: 003501 H
R Counter Latch: 000010 H

The above values will set the CPLL66-4240-4240 to 2.240GHz
