series

**Amphenol miniature-ribbon connectors**

# introduction

Amphenol 57, 157, 57LE miniature-ribbon connectors — a family of connectors proven to meet the demands of today's multi-wire cable termination applications.

57, 157, 57LE miniature-ribbon connectors are ideally suited for use in modems, multi-plexers, computers and peripherals, medical equipment, PBX devices and scientific instrumentation. These connectors are used extensively in the connection of conventional telephone equipment. And they contribute to the reliable, cost-effective termination of cash registers, vending machines and similar equipment.

## interchangeable/intermateable

Mating surfaces of both solder-type 57 series and solderless 157 series connectors are compatible. This provides an intermate/intermount capability allowing you to interconnect new equipment without disturbing or rewiring existing connectors.

## engineered performance

57, 157, 57LE series connectors feature gold plating selectively applied to significant areas. Contacts are designed to mate easily and firmly — virtually eliminating the possibility of bent pins or misalignment. The two wide, flat surfaces making electrical contact are compressed tightly by the flexing action of both members. Contacts are self-cleaning, self-wiping — contact surfaces are kept clear of corrosion and foreign matter, the result being highly reliable electrical continuity and low contact resistance.

## low cost and efficient

With their long life and reliability, Amphenol 57, 157, 57LE miniature-ribbon connectors actually cost less than most other types. Low cost, efficient 57, 157, 57LE series connectors are easily terminated — either in the field, or in-plant. And special accessories available from Amphenol can help bring installed cost even lower. A large variety of connector sizes, configurations and optional features are available to suit the most exacting requirements.

The following pages detail our standard 57, 157, 57LE miniature-ribbon connectors, compatible accessories and termination tooling.

# general configuration — 57 series solder termination

## description

Micro-Ribbon connectors offer a fast, economical and distinctively different method of achieving electrical interconnection.

The heart of the connector is the ribbon contact, selectively plated gold over nickel on a copper alloy base.

With contacts designed to mate easily and positively, the 57 series Micro-Ribbon connector delivers electrically and mechanically sound interconnections time after time.

Exceptionally versatile, 57 series Micro-Ribbon connectors are available in rack and panel, cable to panel, cable to cable and printed circuit types.

## general specifications

|                             |                                                                                          |
|-----------------------------|------------------------------------------------------------------------------------------|
| Current Capacity .....      | 5 amps per contact                                                                       |
| Voltage Rating .....        | 700 volts D.C. at sea level<br>200 volts D.C. at 70,000 ft.                              |
| Operating Temperature ..... | -55°C to +105°C<br>-67°F to +221°F                                                       |
| Wire Sizes .....            | Solid: 22-gauge maximum<br>Stranded: 24-gauge maximum                                    |
| Contacts .....              | Selectively plated 20 microinches gold over 50 microinches nickel on a copper alloy base |
| Dielectric .....            | Diallyl phthalate per MIL-M-14G Type MDG                                                 |
| Shells .....                | Zinc-plated steel with clear chromate coating; trapezoidal shape for polarization.       |

## features

- Copper alloy contacts, selectively plated gold-over-nickel for excellent current-carrying characteristics.
- UL 94 VO rated diallyl phthalate dielectric per MIL-M-14G Type MDG, for operation at up to 700 volts D.C. (sea level) without shorting or flashover. Resists cracking or chipping and has low moisture absorption.
- Float bushings on receptacles allow .020" radial float, for easy mating.
- Zinc-plated steel outer shell, with clear chromate finish, for corrosion resistance.
- Wide, flat mating surfaces, pressed tightly together by flexing action of both contacts, for electrical continuity.
- Positive mating action that wipes contacts clean, removing film or foreign matter, for low contact resistance.
- Solder cup type contact tails (for easy wire attachment) and pin style tails (for printed circuit board attachment) both are available. A high barrier between contact rows also is available.
- A trapezoidal-shape shell that assures correct polarity.

## connector deviations (1,000 piece m.o.q)

| Deviation Number | Deviation Description for 57/157 Series Connectors                                                          |
|------------------|-------------------------------------------------------------------------------------------------------------|
| (398)            | Connector shells and steel hardware nickel plated                                                           |
| (424)            | Contacts fully plated, 30 microinches gold select over 50 microinches nickel.                               |
| (438)            | Gold flashed contacts on mating area, 50 microinches min. nickel underplate.                                |
| (441)            | Tin plated shells                                                                                           |
| (448)            | Contacts selectively plated, 30 microinches min. gold on mating area, 50 microinches min. nickel underplate |
| (450)            | Contacts selectively plated, 50 microinches min. gold on mating area, 50 microinches min. nickel underplate |

NOTE: Not all part numbers are available in all deviations. To verify availability contact the factory directly, or your local manufacturer's representative or distributor. Check with factory for other deviations not listed above.

## connector deviation ordering information

To order a deviation of a catalog miniature-ribbon connector, add one of the listed deviation numbers in parenthesis to the catalog part number. Example: To order 57-10500 with tin plated shells, request 57-10500 (441).

NOTE: Only one deviation number can be applied to a catalog part number at a time.

| <b>Ground bracket:</b>     | Cold rolled Steel; bright Tin plated                           |

Amphenol introduces a new low profile right angle printed circuit board receptacle for Host Adapter Accessory Cards. Developed in response to newly emerging SCSI applications, it is also an ideal choice for any application requiring a low-cost, right angle PC tail connector.

Available in either standard, or reverse polarization, these receptacles are completely interchangeable with standard Amphenol micro-ribbon® connectors. To accommodate PC panel or chassis thickness, the front shell has been lengthened 0.100". A 0.070" reduction in connector-to-board height, as measured from PCB surface to connector centerline, provides a lower profile to accommodate PC Host Adapter Card/IO Port configurations.

Beryllium copper contacts feature recessed "Closed Front Entry" design for improved ESD suppression. The positive mating action of these contacts is self-wiping and self-cleaning, resulting in highly reliable electrical continuity and low contact resistance. Spring clip or jack screw mounting hardware assures connectors remain tightly engaged.

|                         |                                                                                                         |
|-------------------------|---------------------------------------------------------------------------------------------------------|

## general configuration – 157 series I.D.C. termination

### description

Amphenol 157 Micro-Pierce connectors combine the field-proven features and reliability of 57 series micro-ribbon solder-type connectors with the speed and convenience of solderless termination.

These versatile rack and panel, cable to panel, and cable to cable connectors are available in 14-, 24-, 36-, 50- and 64-contact configurations (see factory for 64-pin option).

Solderless termination, as accomplished using either hand or automatic termination equipment is fast, requires no special skill, yet results in reliable, virtually mistake-proof termination because individual conductor preparation is not necessary.

### features

- Glass-filled polyester dielectric permits operation to 700 VDC at sea level without shorting or flashover. Dielectric resists cracking or chipping — has high mechanical strength. Also low moisture absorption.
- Iron-copper contacts with plated gold over nickel for excellent current-carrying characteristics up to 5 amps.
- Terminal area provides positive insulation-piercing, excellent electrical continuity as wiped-clean conductor cold-flows around engaging surface to form large contact area.
- Float-bushing mouting permits .020 radial float for easy mating.
- Zinc-plated steel outer shell with clear chromate finish resists corrosion.
- Wide, flat mating surfaces are pressed tightly together by the flexing action of both contacts for protection against "opens".
- Positive mating action wipes contacts clean, removes film or foreign material for low contact resistance.
- Trapezoidal shell assures correct polarity.

### general specifications

## SCSI overmold hood kit for 50 position connectors

This kit, including two hermaphroditic hood shells and a ferrule, reduces user pre-mold operations thus lowering labor costs. Also, the single crimp ferrule eliminates the need for an inner/outer crimp typical of other product offerings.

#### applications

For use with the following Amphenol connectors:

157-12500-10 (441) 157-12500-14 (441)  
157-22500-14 (441) 157-42500 (441)

Use suffix "508" for connector & overmold hood combination kit, i.e., 157-12500-10-(508)

#### order information

Part Number: 157-1869-501

#### Assembly Instructions:

- 1.) Slide ferrule over the cable.
- 2.) Remove jacket insulation to appropriate length.
- 3.) Remove braid to appropriate length.
- 4.) Roll back braid over the jacket insulation.
- 5.) Terminate the connector.
- 6.) Assemble the overmold hoods.
- 7.) Roll back braid over the hoods.
- 8.) Slide ferrule over the braid such that the braid is sandwiched between the hood and ferrule.
- 9.) Crimp the ferrule.

# 157 series all-plastic Micro-Pierce® connectors

## features

- Glass-filled polyester dielectric permits operation to 700 VDC at sea level without shorting or flashover. Dielectric resists cracking or chipping — has high mechanical strength. Also low moisture absorption.
- Iron-copper contacts with plated gold over nickel for excellent current-carrying characteristics up to 5 amps.
- Terminal area provides positive insulation-piercing, excellent electrical continuity as wiped-clean conductor cold-flows around engaging surface to form large contact area.
- Float-bushing mounting permits .020 radial float for easy mating.
- Zinc-plated steel outer shell with clear chromate finish resists corrosion.
- Wide, flat mating surfaces are pressed tightly together by the flexing action of both contacts for protection against "opens".
- Positive mating action wipes contacts clean, removes film or foreign material for low contact resistance.
- Trapezoidal shell assures correct polarity.
- 90° plastic hoods are separate from the cable clamp device which is attached directly to the connector body. The hood snaps on and off easily.
- The mated connectors may be locked together with either spring clips, provided on the receptacle, or a captivated screw. With the spring clip locking device there is no need for additional hardware. The spring clips engage the windows provided in the plug body.

## description

Amphenol 157 Micro-Pierce connectors combine the field-proven features and reliability of 57 series micro-ribbon solder-type connectors with the speed and convenience of solderless termination.

Solderless termination, as accomplished using either hand or automatic termination equipment, is fast, requires no special skill, yet results in reliable, virtually mistake-proof termination because individual conductor preparation is not necessary.

### 3-Step Insulation Displacement:

Termination is as fast and easy as 1-2-3 ... in one, continuous operation. First, the insulation is pierced. Next, in the

transition area, the insulation is cut to complete separation. Finally, electrical contact is made at the smooth engaging surface.

# connectors for small computer system interface (SCSI) applications

## description

Amphenol 57 and 157 series connectors are ideally suited for small computer system interface (SCSI), given their compact design and versatility.

These connectors provide the internal and external interconnections between host computers and various types of peripheral devices including: disk drives; tape drives; printers; and optical disk storage units.

Amphenol 57 and 157 series connectors for SCSI applications provide plugs incorporating grounding indents for maximum EMI/RFI protection, in addition to tin plated shells for solderability.

An overmold can is available for the 157 series 50 contact connector. Also available is a low profile right angle printed circuit board connector for host adapter accessory cards.

## applications

The schematic diagram shown on this page illustrates a typical interconnect configuration as defined by ANSI X3T9.2. While this may vary by manufacturer and equipment design, it serves to demonstrate the SCSI interconnect system and connectors offered by Amphenol.

## SCSI overmold hood kit for 50 position connectors

This kit, including two hermaphroditic hood shells and a ferrule, reduces user pre-mold operations thus lowering labor costs. Also, the single crimp ferrule eliminates the need for an inner/outer crimp typical of other product offerings.

#### applications

For use with the following

Amphenol connectors:

157-12500-10 (441) 157-12500-14 (441)

157-22500-14 (441) 157-42500 (441)

Use suffix "508" for connector & overmold hood combination kit, i.e., 157-12500-10-(508)

#### order information

Part Number: 157-1869-501

#### Assembly Instructions:

- 1.) Slide ferrule over the cable.
- 2.) Remove jacket insulation to appropriate length.
- 3.) Remove braid to appropriate length.
- 4.) Roll back braid over the jacket insulation.
- 5.) Terminate the connector.
- 6.) Assemble the overmold hoods.
- 7.) Roll back braid over the hoods.
- 8.) Slide ferrule over the braid such that the braid is sandwiched between the hood and ferrule.
- 9.) Crimp the ferrule.

## general configuration

### 57LE series, right angle PC mount

#### description

Compatible with both Amphenol 57 series solder-type and 157 series insulation displacement-type connectors, the Amphenol 57LE series comprises a family of all-plastic Micro-Ribbon connectors unique in its versatility. Versatility that results, in part, from a flexibility of configuration that enables you to obtain an EMI/RFI shielding capability through use of metal front shells.

#### features

- Intermateable with Amphenol 57 series (solder termination) and 157 series Micro-Pierce® (solderless termination) connectors.
- Ribbon contacts are captivated in the connector housing to provide repeated mating and unmating without displacement of contacts.
- Availability of right angle header allows use of mass termination technology from P/C board to equipment panels.
- UL94V-0 flammability rated material.
- Alternative plating for application flexibility.

#### general specifications

Panel cut-out

## termination tooling

### **Insertion Tool No. 356-251**

The hand insertion/repair tool is designed for single wire termination into Amphenol 157 series connectors as well as for the opening and closing of cable clamps.

### **Tele-Pierce® Hand Tool No. 356-246**

This versatile bench mount tool is complete and ready for in-the-field termination of all types of running cable. It can be used as a low-volume production tool. Carrying case included.

### **Adapter Kit No. 356-247**

For use with No. 356-246 Tele-Pierce Hand Tool, this adapter kit allows termination of all types and sizes of top and side cable entry connectors as well as rack and panel connectors.

## termination tooling

### Electro-Pierce® Mark V Machine No. 359-429

The Electro-Pierce Mark V is a semi-automatic production tool for positioning and inserting cable one-pair-at-a-time into 157 series connectors. It features an internal micro-processor which controls all machine functions eliminating interconnecting cabling associated with external control units. Modularized design results in increased performance reliability and ease of maintenance. The Electro-Pierce Mark V can be programmed for termination of the complete line of 157 series connectors including 7, 12, 18, 25 and 32 wire pairs.

Also available for model "ACCU-PIERCE II"  
P/N 359-8157 for high volume manufacturing.

P/N 359-429

P/N 359-8157

### Pneumatic Crimp Tool (for overmold can) No. 358-408

Low cost pneumatic tool for hexagonal ferrule crimp. Lowers user installed cost on higher production applications. Crimp die No. 357-315-04 purchased separately.

### Hand Crimp Tool (for overmold can) No. 357-315

Economical hand tool for hexagonal ferrule crimp to cable and hood. Crimp die (No. 357-315-04) purchased separately.

### Crimp Die No. 357-315-04

Hexagonal crimp die for use with either hand crimp tool No. 357-315 or pneumatic crimp tool No. 358-408.

## connector hardware and accessories

### screws/nut

**57-1523-02** #4-40 x 3/8" long slotted round head taptite screw for use on cable clamp assembly.

**37-788-04** #2-56 NC-2A x 5/32" binding head machine screw with internal tooth lockwasher. Used to secure front and back shell on top and side cable entry connectors.

**57-1815-02** #4-40 x 5/8" long NC-2A fillister head screw, rolled head. Long screw used to lock mated pairs of running cable connectors such as: 57-10500-7; 57-20500-7; 157-72500-3; and 57-82500-3.

**34-1120** #3-48 NC2A x 5/16" long special screw for 57-60XXX connectors.

**41-333-3** #3-48 Elastic nut and washer for 57-60XXX connectors.

**57-1523-2P** Short screw for end cable entry type (pg. 17 & 19)

**57-1815-2P** Long screw for end cable entry type (pg. 17 & 19)

### latch

**57-1002-02** Spring latch. Wire locking device used on female connectors such as 57-40XXX and 57-60XXX connectors.

**57-1001-2** End disc. Retaining bracket for spring latch 57-1002-02.

**57-2035-2P** Spring latch for 57B series (pg. 9)

### hoods

**57-1030-2** Low profile hood (large 7/8" high) used on 57-10500-14 and 57-20500-7 connectors.

**57-1031-2** Low profile hood (small 5/8" high) used on 57-10500-7 and 57-20500-19 connectors.

**157-1836** Low profile plastic hood used on 157-79500-X and 157-89500-1 connectors, and connectors with deviation (431)

### dust cover

**57-1763** Dust cover for 50 contact male or female connectors.
