

## Quad channel high side driver for automotive applications

### Features

Max transient supply voltage	$V_{CC}$	41V
Operating voltage range	$V_{CC}$	4.5 to 28V
Max on-state resistance (per ch.)	$R_{ON}$	50 m $\Omega$
Current limitation (typ)	$I_{LIMH}$	27 A
Off-state supply current	$I_S$	2 $\mu A^{(1)}$

1. Typical value with all loads connected.

#### ■ General

- Inrush current active management by power limitation
- Very low stand-by current
- 3.0 V CMOS compatible inputs
- Optimized electromagnetic emissions
- Very low electromagnetic susceptibility
- In compliance with the 2002/95/EC european directive

#### ■ Diagnostic functions

- Open drain status output
- On-state open-load detection
- Off-state open-load detection
- Output short to  $V_{CC}$  detection
- Overload and short to ground (power limitation) indication
- Thermal shutdown indication

#### ■ Protections

- Undervoltage shutdown
- Overvoltage clamp
- Load current limitation
- Self limiting of fast thermal transients
- Protection against loss of ground and loss of  $V_{CC}$
- Over temperature shutdown with auto restart (thermal shutdown)
- Reverse battery protected (see [Application schematic<sup>\(1\)</sup> on page 22](#))

PowerSSO-24

- Electrostatic discharge protection

### Applications

- All types of resistive, inductive and capacitive loads

### Description

The VNQ5E050K-E is a quad channel high-side driver manufactured in the ST proprietary VIPower™ M0-5 technology and housed in the tiny PowerSSO-24 package.

The VNQ5E050K-E is designed to drive automotive grounded loads delivering protection, diagnostics and an easy 3 V and 5 V CMOS compatible interface with any microcontroller.

The device integrates advanced protective functions such as load current limitation, inrush and overload active management by power limitation, over temperature shut-off with auto restart and over-voltage active clamp.

A dedicated active low digital status pin is associated with every output channel in order to provide *Enhanced* diagnostic functions including fast detection of overload and short-circuit to ground, over temperature indication, short-circuit to  $V_{CC}$  diagnosis and ON & OFF-state open-load detection.

The diagnostic feedback of the whole device can be disabled by pulling the STAT\_DIS pin up, thus allowing wired-ORing with other similar devices.

# 1 Block diagram and pin configuration

Figure 1. Block diagram

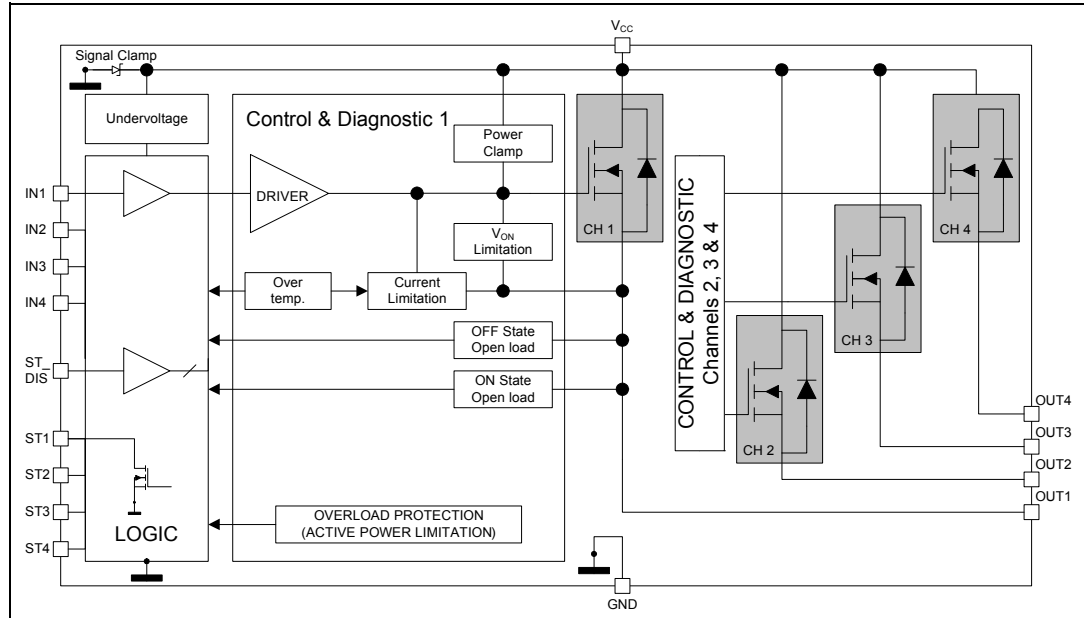

Table 1. Pin function

Name	Function
V <sub>CC</sub>	Battery connection.
OUTPUTn	Power output.
GND	Ground connection. Must be reverse battery protected by an external diode/resistor network.
INPUTn	Voltage controlled input pin with hysteresis, CMOS compatible. Controls output switch state.
STATUSn	Open drain digital diagnostic pin.
STAT_DIS	Active high CMOS compatible pin, to disable the STATUS pin.

Figure 2. Configuration diagram (top view)

Table 2. Suggested connections for unused and not connected pins

Connection / pin	Status	N.C.	Output	Input	STAT_DIS
Floating	X	X	X	X	X
To ground	Not allowed	X	Not allowed	Through 10KΩ resistor	Through 10KΩ resistor

## 2 Electrical specifications

Figure 3. Current and voltage conventions<sup>(1)</sup>

1.  $V_{Fn} = V_{OUTn} - V_{CC}$  during reverse battery condition.

### 2.1 Absolute maximum ratings

Stressing the device above the rating listed in the “Absolute maximum ratings” table may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the Operating sections of this specification is not implied. Exposure to the conditions in table below for extended periods may affect device reliability. Refer also to the STMicroelectronics SURE Program and other relevant quality document.

Table 3. Absolute maximum ratings

Symbol	Parameter	Value	Unit
V <sub>CC</sub>	DC supply voltage	41	V
- V <sub>CC</sub>	Reverse DC supply voltage	0.3	V
- I <sub>GND</sub>	DC reverse ground pin current	200	mA
I <sub>OUT</sub>	DC output current	Internally limited	A
- I <sub>OUT</sub>	Reverse DC output current	15	A
I <sub>IN</sub>	DC input current	+10/-1	mA
I <sub>STAT</sub>	DC status current	+10/-1	mA
I <sub>STAT_DIS</sub>	DC status disable current	+10/-1	mA
E <sub>MAX</sub>	Maximum switching energy (single pulse) (L= 3mH; R <sub>L</sub> =0Ω; V <sub>bat</sub> =13.5V; T <sub>jstart</sub> =150°C; I <sub>OUT</sub> = I <sub>limL</sub> (Typ.))	104	mJ

**Table 3. Absolute maximum ratings (continued)**

Symbol	Parameter	Value	Unit
V <sub>ESD</sub>	Electrostatic discharge (Human Body Model: R=1.5KΩ; C=100pF)		
	– Input	4000	V
	– Status	4000	V
	– STAT_DIS	4000	V
	– Output	5000	V
	– V <sub>CC</sub>	5000	V
V <sub>ESD</sub>	Charge device model (CDM-AEC-Q100-011)	750	V
T <sub>j</sub>	Junction operating temperature	-40 to 150	°C
T <sub>stg</sub>	Storage temperature	- 55 to 150	°C

## 2.2 Thermal data

**Table 4. Thermal data**

Symbol	Parameter	Value	Unit
R <sub>thj-case</sub>	Thermal resistance junction-case (max) (with one channel ON)	2.8	°C/W
R <sub>thj-amb</sub>	Thermal resistance junction-ambient (max)	See <a href="#">Figure 36</a>	°C/W

## 2.3 Electrical characteristics

Values specified in this section are for  $8\text{ V} < V_{CC} < 28\text{ V}$ ;  $-40\text{ }^{\circ}\text{C} < T_j < 150\text{ }^{\circ}\text{C}$ , unless otherwise stated.

**Table 5. Power section**

$T_{HYST}$	Thermal hysteresis ( $T_{TSD} - T_R$ )			7		$^{\circ}\text{C}$
$t_{SDL}$	Status delay in overload conditions	$T_j > T_{TSD}$ (see <a href="#">Figure 4.</a> )			20	$\mu\text{s}$
$V_{DEMAG}$	Turn-off output voltage clamp	$I_{OUT} = 2\text{A}$ ; $V_{IN} = 0$ ; $L = 6\text{mH}$	$V_{CC} - 41$	$V_{CC} - 46$	$V_{CC} - 52$	V
$V_{ON}$	Output voltage drop limitation	$I_{OUT} = 0.1\text{A}$ (see <a href="#">Figure 5.</a> ) $T_j = -40^{\circ}\text{C} \dots +150^{\circ}\text{C}$		25		mV

1. To ensure long term reliability under heavy overload or short circuit conditions, protection and related diagnostic signals must be used together with a proper software strategy. If the device is subjected to abnormal conditions, this software must limit the duration and number of activation cycles.

**Table 9. Open-load detection (8V<V<sub>CC</sub><18V)**

Symbol	Parameter	Test conditions	Min.	Typ.	Max.	Unit
I <sub>OL</sub>	Open-load on-state detection threshold	V <sub>IN</sub> = 5V	10		70	mA
t <sub>DOL(on)</sub>	Open-load on-state detection delay	I <sub>OUT</sub> = 0A (see <a href="#">Figure 4.</a> )			200	μs
t <sub>POL</sub>	Delay between INPUT falling edge and STATUS rising edge in open-load condition	I <sub>OUT</sub> = 0A (see <a href="#">Figure 4.</a> )	200	550	1200	μs
V <sub>OL</sub>	Open-load off-state voltage detection threshold	V <sub>IN</sub> = 0V	2		4	V

### 3 Application information

Figure 32. Application schematic<sup>(1)</sup>

1. Channels 2, 3 and 4 have the same internal circuit as channel 1.

### 3.1 Gnd protection network against reverse battery

#### 3.1.1 Solution 1: resistor in the ground line (R<sub>GND</sub> only)

This can be used with any type of load.

The following is an indication on how to dimension the R<sub>GND</sub> resistor.

$$1) R_{GND} \leq 600\text{mV} / (I_{S(\text{on})\text{max}}).$$

$$2) R_{GND} \geq (-V_{CC}) / (-I_{GND})$$

where -I<sub>GND</sub> is the DC reverse ground pin current and can be found in the absolute maximum rating section of the device datasheet.

Power Dissipation in R<sub>GND</sub> (when V<sub>CC</sub> < 0: during reverse battery situations) is:

$$P_D = (-V_{CC})^2 / R_{GND}$$

This resistor can be shared amongst several different HSDs. Please note that the value of this resistor should be calculated with formula (1) where I<sub>S(on)max</sub> becomes the sum of the maximum on-state currents of the different devices.

Please note that if the microprocessor ground is not shared by the device ground then the R<sub>GND</sub> will produce a shift (I<sub>S(on)max</sub> \* R<sub>GND</sub>) in the input thresholds and the status output values. This shift will vary depending on how many devices are ON in the case of several high side drivers sharing the same R<sub>GND</sub>.

If the calculated power dissipation leads to a large resistor or several devices have to share the same resistor then ST suggests to utilize Solution 2 (see below).

### 3.1.2 Solution 2: diode ( $D_{GND}$ ) in the ground line

A resistor ( $R_{GND}=1k\Omega$ ) should be inserted in parallel to  $D_{GND}$  if the device drives an inductive load.

This small signal diode can be safely shared amongst several different HSDs. Also in this case, the presence of the ground network will produce a shift ( $\approx 600mV$ ) in the input threshold and in the status output values if the microprocessor ground is not common to the device ground. This shift will not vary if more than one HSD shares the same diode/resistor network.

## 3.2 Load dump protection

$D_{ld}$  is necessary (Voltage Transient Suppressor) if the load dump peak voltage exceeds to  $V_{CC}$  max DC rating. The same applies if the device is subject to transients on the  $V_{CC}$  line that are greater than the ones shown in the ISO T/R 7637/1 table.

## 3.3 MCU I/Os protection

If a ground protection network is used and negative transient are present on the  $V_{CC}$  line, the control pins will be pulled negative. ST suggests to insert a resistor ( $R_{prot}$ ) in line to prevent the  $\mu C$  I/Os pins to latch-up.

The value of these resistors is a compromise between the leakage current of  $\mu C$  and the current required by the HSD I/Os (Input levels compatibility) with the latch-up limit of  $\mu C$  I/Os.

$$-V_{CCpeak}/I_{latchup} \leq R_{prot} \leq (V_{OH\mu C} - V_{IH} - V_{GND}) / I_{IHmax}$$

Calculation example:

For  $V_{CCpeak} = -100V$  and  $I_{latchup} \geq 20mA$ ;  $V_{OH\mu C} \geq 4.5V$

$$5k\Omega \leq R_{prot} \leq 180k\Omega$$

Recommended  $R_{prot}$  value is  $10k\Omega$ .

## 3.4 Open-load detection in off-state

Off-state open-load detection requires an external pull-up resistor ( $R_{PU}$ ) connected between OUTPUT pin and a positive supply voltage ( $V_{PU}$ ) like the +5V line used to supply the microprocessor.

The external resistor has to be selected according to the following requirements:

1) no false open-load indication when load is connected: in this case we have to avoid  $V_{OUT}$  to be higher than  $V_{OLmin}$ ; this results in the following condition

$$V_{OUT} = (V_{PU} / (R_L + R_{PU})) R_L < V_{OLmin}$$

2) no misdetection when load is disconnected: in this case the  $V_{OUT}$  has to be higher than  $V_{OLmax}$ ; this results in the following condition  $R_{PU} < (V_{PU} - V_{OLmax}) / I_{L(off2)}$ .

Because  $I_{s(OFF)}$  may significantly increase if  $V_{out}$  is pulled high (up to several mA), the pull-up resistor  $R_{PU}$  should be connected to a supply that is switched OFF when the module is in standby.

The values of  $V_{OLmin}$ ,  $V_{OLmax}$  and  $I_{L(off2)}$  are available in the electrical characteristics section.

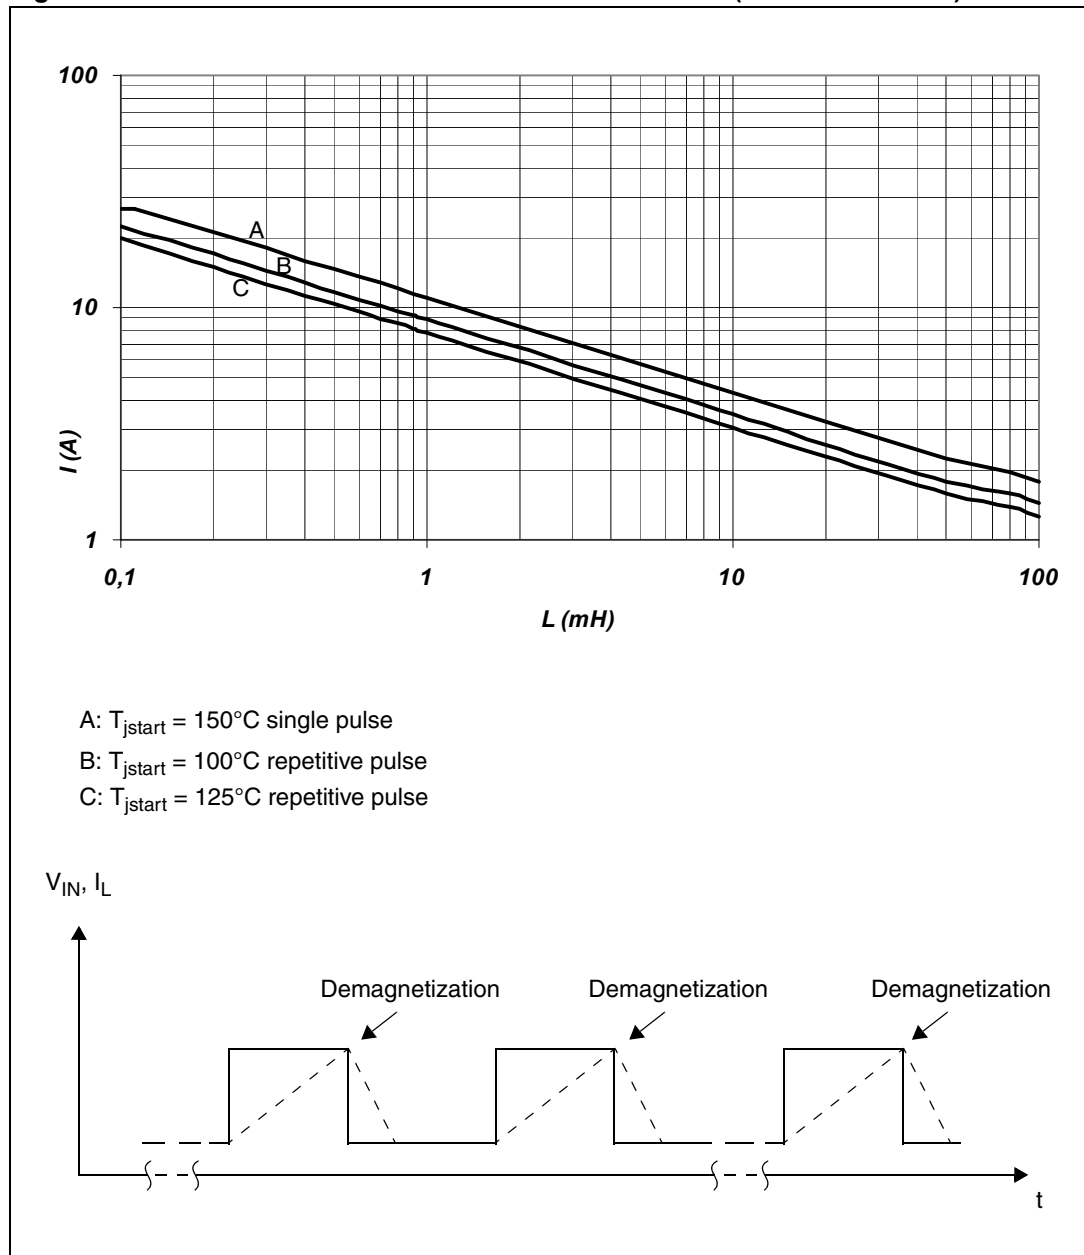

**Figure 33. Open-load detection in off-state**

### 3.5 Maximum demagnetization energy ( $V_{CC} = 13.5V$ )

Figure 34. Maximum turn-off current versus inductance (for each channel)<sup>(1)</sup>

1. Values are generated with  $R_L = 0\Omega$ .  
 In case of repetitive pulses,  $T_{jstart}$  (at beginning of each demagnetization) of every pulse must not exceed the temperature specified above for curves A and B.

## 4 Package and PCB thermal data

### 4.1 PowerSSO-24 thermal data

Figure 35. PowerSSO-24 PC board<sup>(1)</sup>

1. Layout condition of  $R_{th}$  and  $Z_{th}$  measurements (PCB: Double layer, Thermal Vias, FR4 area= 77mm x 86mm, PCB thickness=1.6mm, Cu thickness=70  $\mu\text{m}$  (front and back side), Copper areas: from minimum pad lay-out to 8cm<sup>2</sup>).

Figure 36.  $R_{thj-amb}$  vs PCB copper area in open box free air condition (one channel ON)

Figure 37. PowerSSO-24 thermal impedance junction ambient single pulse (one channel ON)

Figure 38. Thermal fitting model of a double channel HSD in PowerSSO-24<sup>(1)</sup>

1. The fitting model is a simplified thermal tool and is valid for transient evolutions where the embedded protections (power limitation or thermal cycling during thermal shutdown) are not triggered.

**Equation 1: pulse calculation formula**

$$Z_{TH\delta} = R_{TH} \cdot \delta + Z_{THtp}(1 - \delta)$$

where  $\delta = t_p/T$

**Table 15. Thermal parameter**

Area/island (cm <sup>2</sup> )	Footprint	2	8

C6 (W.s/°C)	2.2	5	17

## 5 Package information

### 5.1 ECOPACK® packages

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK® packages, depending on their level of environmental compliance. ECOPACK® specifications, grade definitions and product status are available at: [www.st.com](http://www.st.com).

ECOPACK® is an ST trademark.

### 5.2 Package mechanical data

Figure 39. PowerSSO-24 package dimensions

Table 16. PowerSSO-24™ mechanical data

Symbol	Millimeters		
	Min	Typ	Max
A			2.45
A2	2.15		2.35
a1	0		0.1
b	0.33		0.51
c	0.23		0.32
D	10.10		10.50
E	7.4		7.6
e		0.8	
e3		8.8	
F		2.3	
G			0.1
H	10.1		10.5
h			0.4
k	0°		8°
L	0.55		0.85
O		1.2	
Q		0.8	
S		2.9	
T		3.65	
U		1.0	
N			10°
X	4.1		4.7
Y	6.5		7.1

# 6 Packing information

## 6.1 PowerSSO-24 package packing information

Figure 40. PowerSSO-24 tube shipment (no suffix)

Figure 41. PowerSSO-24 tape and reel shipment (suffix "TR")

## 7 Order codes

Table 17. Device summary

Package	Order codes	
	Tube	Tape and reel
PowerSSO-24	VNQ5E050K-E	VNQ5E050KTR-E

## 8 Revision history

**Table 18. Document revision history**

Date	Revision	Changes
July-2006	1	Initial release
May-2007	2	Document rewritten, restructured and put in corporate technical literature template. Operative Vcc range changed from 36 V to 28 V. Tables 6, 12 updated.
04-Feb-2008	3	Document restructured. Changed <i>Description</i> on cover page. <i>Table 9: Open-load detection (8V&lt;Vcc&lt;18V)</i> : added td_vol parameter. Changed <i>Section 2.4: Waveforms</i> . Added <i>Section 2.5: Electrical characteristics curves</i> .
22-Jun-2009	4	<i>Table 16: PowerSSO-24 mechanical data</i> : – Deleted A (min) value – Changed A (max) value from 2.47 to 2.45 – Changed A2 (max) value from 2.40 to 2.35 – Changed a1 (max) value from 0.075 to 0.1 – Added F and k rows
22-Jul-2009	5	Updated <i>Figure 39: PowerSSO-24 package dimensions</i> . Updated <i>Table 16: PowerSSO-24 mechanical data</i> : – Deleted G1 row – Added O, Q, S, T and U rows
20-Sep-2013	6	Updated Disclaimer

**Please Read Carefully:**

Information in this document is provided solely in connection with ST products. STMicroelectronics NV and its subsidiaries ("ST") reserve the right to make changes, corrections, modifications or improvements, to this document, and the products and services described herein at any time, without notice.

All ST products are sold pursuant to ST's terms and conditions of sale.

Purchasers are solely responsible for the choice, selection and use of the ST products and services described herein, and ST assumes no liability whatsoever relating to the choice, selection or use of the ST products and services described herein.

No license, express or implied, by estoppel or otherwise, to any intellectual property rights is granted under this document. If any part of this document refers to any third party products or services it shall not be deemed a license grant by ST for the use of such third party products or services, or any intellectual property contained therein or considered as a warranty covering the use in any manner whatsoever of such third party products or services or any intellectual property contained therein.

**UNLESS OTHERWISE SET FORTH IN ST'S TERMS AND CONDITIONS OF SALE ST DISCLAIMS ANY EXPRESS OR IMPLIED WARRANTY WITH RESPECT TO THE USE AND/OR SALE OF ST PRODUCTS INCLUDING WITHOUT LIMITATION IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE (AND THEIR EQUIVALENTS UNDER THE LAWS OF ANY JURISDICTION), OR INFRINGEMENT OF ANY PATENT, COPYRIGHT OR OTHER INTELLECTUAL PROPERTY RIGHT.**

**ST PRODUCTS ARE NOT DESIGNED OR AUTHORIZED FOR USE IN: (A) SAFETY CRITICAL APPLICATIONS SUCH AS LIFE SUPPORTING, ACTIVE IMPLANTED DEVICES OR SYSTEMS WITH PRODUCT FUNCTIONAL SAFETY REQUIREMENTS; (B) AERONAUTIC APPLICATIONS; (C) AUTOMOTIVE APPLICATIONS OR ENVIRONMENTS, AND/OR (D) AEROSPACE APPLICATIONS OR ENVIRONMENTS. WHERE ST PRODUCTS ARE NOT DESIGNED FOR SUCH USE, THE PURCHASER SHALL USE PRODUCTS AT PURCHASER'S SOLE RISK, EVEN IF ST HAS BEEN INFORMED IN WRITING OF SUCH USAGE, UNLESS A PRODUCT IS EXPRESSLY DESIGNATED BY ST AS BEING INTENDED FOR "AUTOMOTIVE, AUTOMOTIVE SAFETY OR MEDICAL" INDUSTRY DOMAINS ACCORDING TO ST PRODUCT DESIGN SPECIFICATIONS. PRODUCTS FORMALLY ESCC, QML OR JAN QUALIFIED ARE DEEMED SUITABLE FOR USE IN AEROSPACE BY THE CORRESPONDING GOVERNMENTAL AGENCY.**

Resale of ST products with provisions different from the statements and/or technical features set forth in this document shall immediately void any warranty granted by ST for the ST product or service described herein and shall not create or extend in any manner whatsoever, any liability of ST.
