Description

MAMX-011037-DIE is a double-balanced passive diode mixer MMIC. The mixer offers low conversion loss, high linearity and a wide IF bandwidth. The double-balanced circuit configuration provides excellent port isolation while internal 50-ohm matching simplifies its application.

This mixer is well suited for applications such as test and measurement, microwave radio and radar.

MAMX-011037-DIE is also available in a 3 mm QFN package. Refer to datasheet MAMX-011054.

5. Exceeding any one or combination of these limits may cause permanent damage to this device.
 6. MACOM does not recommend sustained operation near these survivability limits.
 7. Operating at nominal conditions with $T_J \leq +150^\circ\text{C}$ will ensure MTTF > 1×10^6 hours.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these HBM Class 1B devices.

Assembly Guideline

Notes:

Attach bare die to PCB or carrier using conductive epoxy. Bond die signal pads to PCB 50 Ω traces using 1.0 mil gold wire. Two bond wires are recommended on each signal pad for optimal performance. There is no need to bond the die GND pads.

Outline Drawing

Notes:

Units are in microns with a tolerance of $\pm 5 \mu\text{m}$, except for die exterior dimensions which are street-center-to-street-center – nominal kerf, $\pm 20 \mu\text{m}$ tolerance.

Die thickness is $100 \pm 10 \mu\text{m}$.

RF, LO and IF Bond-pads are $160 \times 100 \mu\text{m}$.
