Product Description

The AG606 is a dual amplifier containing two internal matched amplifiers optimal for a push-pull configuration. The internal amplifiers employ InGaP HBT technology for a cost-effective low-distortion solution.

The AG606 is ideal for drop amplifiers, splitters, and other low to moderate power outside plant CATV applications. The amplifier can also be useful in low power headend applications such as linear laser drivers.

The AG606 has excellent VSWR when used in a 75 Ω push-pull configuration. It is provided in a low-cost environmentally-friendly lead-free/green/ RoHS-compliant SOIC-8 package.

Mounting Config. Notes

1. Ground / thermal vias are critical for the proper performance of this device. Vias should use a .35mm (#80/.0135") diameter drill and have a final plated through diameter of .25mm (.010")
2. Add as much copper as possible to inner and outer layers near the part to ensure optimal thermal performance.
3. To ensure reliable operation, device ground paddle-to-ground pad solder joint is critical.
4. Add mounting screws near the part to fasten the board to a heatsink. Ensure that the ground / thermal via region contacts the heatsink.
5. For optimal thermal performance, expose soldermask on backside where it contacts the heatsink.
6. RF trace width depends upon the PC board material and construction.
7. Use 1 oz. Copper minimum.
8. If the PCB design rules allow, ground vias should be placed under the land pattern for better RF and thermal performance. Otherwise ground vias should be placed as close to the land pattern as possible.
9. All dimensions are in mm. Angles are in degrees.
