

Hi-Reliability GaAlAs Infrared Emitting Diode

OP223, OP224 (TX, TXV), OP224 (S)

Features:

- Processed to OPTEK's military screening program, patterned after MIL-PRF-19500
- Miniature hermetically sealed "pill" package
- Twice the power output of GaAs at same drive current
- "S" level screening available
- Mechanically and spectrally matched to OP600 phototransistors

Description:

Each **OP223 (TX)** and **OP224 (S, TX, TXV)** device is an 890 nm high reliability gallium aluminum arsenide infrared emitting diode that is mounted in a miniature hermetically sealed "pill" type package which can be directly mounted to PCBoards. The gallium aluminum arsenide feature provides twice the radiated output of gallium arsenide at the same forward current.

After electrical testing by manufacturing, devices are processed to OPTEK's 100 percent screening program, which is patterned after MIL-PRF-19500. With a wavelength centered at 890 nm, the *OP223 (TXV) and OP224 (S, TX, TXV)*.

TX and TXV devices are processed to OPTEK's military screening program patterned after MIL-PRF-19500.

S devices are processed to OPTEK's military screening program patterned after MIL-STD-883.
