

# QPC1006

## 0.15 – 2.8 GHz High Power GaN SP3T Switch

### Product Overview

Qorvo's QPC1006 is a Single-Pole, Triple-Throw (SP3T) switch fabricated on Qorvo's QGaN25 0.25um GaN on SiC production process.

Operating from 0.15 to 2.8 GHz, the QPC1006 typically supports 50 W input power handling at control voltages of 0/-40 V for both CW and pulsed RF operations. This switch maintains low insertion loss less than 1.0 dB and greater than 30 dB isolation, making it ideal for high power switching applications across both defense and commercial platforms.

QPC1006 is offered in a 4 x 4 mm plastic overmolded QFN package.

Lead-free and RoHS compliant

Evaluation Boards are available upon request.

4mm x 4mm 24 Lead OVM QFN

### Key Features

- SP3T
- Frequency Range: 0.15 to 2.8 GHz
- Input Power: 50 W
- Insertion Loss: < 1.0 dB
- Isolation: >30 dB Typical
- Switching Speed: 50 ns
- Control Voltages: 0 V/-40 V
- Package Dimensions: 4 x 4 x 0.85 mm

*Performance is typical across frequency. Please reference electrical specification table and data plots for more details.*

### Functional Block Diagram

### Applications

- Commercial and Military Radar
- Communications
- Electronic Warfare
- Test Instrumentation
- General Purpose

### Ordering Information

| Part No.   | ECCN  | Description                             |
|------------|-------|-----------------------------------------|
| QPC1006    | EAR99 | 0.15–2.8 GHz High Power GaN SP3T Switch |
| QPC1006EVB |       | Evaluation Board                        |

## Absolute Maximum Ratings

| Parameter                                   | Rating        |
|---------------------------------------------|---------------|
| Control Voltage ( $V_C$ )                   | -50 V         |
| Control Current ( $I_C$ )                   | 3 mA          |
| Power Dissipation <sup>(1)</sup>            | 14 W          |
| RF Input Power, CW, 50 $\Omega$ , T = 25 °C | 60 W          |
| Channel Temperature, $T_{CH}$               | 275 °C        |
| Mounting Temperature (30 sec)               | 260 °C        |
| Storage Temperature                         | -40 to 150 °C |

Exceeding any one or a combination of the Absolute Maximum Rating conditions may cause permanent damage to the device. Extended application of Absolute Maximum Rating conditions to the device may reduce device reliability.

Notes:

- 1) This is a total loss of which 4 W is mismatched loss and 3 W is dissipated in the passive structures.

## Recommended Operating Conditions

| Parameter               | Min | Typ        | Max | Units |
|-------------------------|-----|------------|-----|-------|
| $V_{C1+}/V_{C1-}$       |     | 0/-40      |     | V     |
| $V_{C2+}/V_{C2-}$       |     | -40/0      |     | V     |
| $V_{C3+}/V_{C3-}$       |     | -40/0      |     | V     |
| Channel Temp., $T_{CH}$ |     | $\leq 225$ |     | °C    |

Electrical specifications are measured at specified test conditions. Specifications are not guaranteed over all recommended operating conditions.

## Electrical Specifications

Test conditions unless otherwise noted: 25 °C,  $V_{C1+}/V_{C1-} = 0\text{ V}/-40\text{ V}$ ,  $V_{C2+}/V_{C2-} = -40\text{ V}/0\text{ V}$ ,  $V_{C3+}/V_{C3-} = -40\text{ V}/0\text{ V}$ .  
See Logic table on page 13.

| Parameter                                                                                       |                      | Min  | Typ     | Max | Units |

## Thermal and Reliability Information

| Parameter                                           | Test Conditions                                                                                                                                                                             | Value                 | Units |
|-----------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|-------|
| Thermal Resistance ( $\theta_{JC}$ ) <sup>(1)</sup> |                                                                                                                                                                                             | 7.93                  | °C/W  |
| Channel Temperature ( $T_{CH}$ ) <sup>(1)</sup>     | $T_{BASE} = 85\text{ °C}$ , $V_{C1+} = 0\text{ V}$ , $V_{C2+} = -40\text{ V}$ , $V_{C3+} = -40\text{ V}$<br>Freq. = 2.8 GHz, $P_{IN} = 50\text{ W}$ , $P_{DISS}$ <sup>(2)</sup> = 5.8 W, CW | 131                   | °C    |
| Median Lifetime ( $T_M$ )                           |                                                                                                                                                                                             | $1.57 \times 10^{10}$ | Hrs   |

Notes:

1. Measured to the back of the package.
2. This is a total  $P_{DISS}$  in the FETs.

## Median Lifetime and Channel Temperature

Test Conditions:  $V_D = +40\text{ V}$ ; Failure Criteria = 10% reduction in  $I_{D\_MAX}$  during DC Life Testing

## Application Circuit

### Notes:

1. This switch can be configured as a Single Pole, Single Throw (SPST) by terminating two unused RF switched ports with a 50 Ohm load.
2. External components are not required.

## Bias Up Procedure

1.  $V_{C1+}$  or  $V_{C2+}$  or  $V_{C3+}$  set to 0 V (see Logic Table for RF Path)
2.  $V_{C1-}$  or  $V_{C2-}$  or  $V_{C3-}$  set to -40 V (see Logic Table for RF Path)
3. Apply RF signal to RF Input

## Bias Up Down

1. Turn off RF supply
2. Turn  $V_{C1-}$  or  $V_{C2-}$  or  $V_{C3-}$  to 0 V
3. Turn  $V_{C1+}$  or  $V_{C2+}$  or  $V_{C3+}$  to 0 V

## Logic Table (SP3T Truth Table)

| RF Path       | State                                      | $V_{C1+}$ | $V_{C1-}$ | $V_{C2+}$ | $V_{C2-}$ | $V_{C3+}$ | $V_{C3-}$ |
|---------------|--------------------------------------------|-----------|-----------|-----------|-----------|-----------|-----------|
| RFC to RF1 ON | On-State (Insertion Loss), RF2 & RF3 = OFF | H         | L         | L         | H         | L         | H         |
| RFC to RF2 ON | On-State (Insertion Loss), RF1 & RF3 = OFF | L         | H         | H         | L         | L         | H         |
| RFC to RF3 ON | On-State (Insertion Loss), RF1 & RF2 = OFF | L         | H         | L         | H         | H         | L         |

- VC High (H) = 0 V
- VC Low (L) = -20, -30, -40 or -50 V

## Evaluation Board (EVB) Assembly Layout.

### Notes:

1. This switch can be configured as a Single Pole, Single Throw (SPST) by terminating one unused RF switched port with a 50 Ohm load.
2. See Logic Table on page 13 for biasing the voltage controls.
3. External components are not required

## Mechanical Information

Units: millimeters

Tolerances: unless specified

x.xx = ± 0.25

x.xxx = ± 0.100

Materials:

Base: Laminate

Packaged Exposed Metallization is gold plated

Marking:

QPC1006: Part number

YY: Part Assembly year

WW: Part Assembly week

MXXX: Batch ID

## Pin Description

| Pad No.             | Symbol           | Description                                                                                      |
|---------------------|------------------|--------------------------------------------------------------------------------------------------|
| 1                   | RF3              | RF switched port 3; matched to 50 Ω; DC coupled                                                  |
| 2, 5, 7, 10, 21, 24 | GND              | Ground. Connected to GND paddle (pin 25); should be grounded on PCB to improve isolation         |
| 3                   | V <sub>C3-</sub> | Control voltage #3; External components are not required                                         |
| 4                   | V <sub>C3+</sub> | Control voltage #3; External components are not required                                         |
| 6                   | RFC              | RF common port; matched to 50 Ω; DC coupled                                                      |
| 8                   | V <sub>C1+</sub> | Control voltage #1; External components are not required                                         |
| 9                   | V <sub>C1-</sub> | Control voltage #1; External components are not required                                         |
| 11                  | RF1              | RF switched port 1; matched to 50 Ω; DC coupled                                                  |
| 12 - 19             | N/C              | Not connected internally. Recommended to be grounded at EVB level                                |
| 20                  | RF2              | RF switched port 2; matched to 50 Ω; DC coupled                                                  |
| 22                  | V <sub>C2+</sub> | Control voltage #2; External components are not required                                         |
| 23                  | V <sub>C2-</sub> | Control voltage #2; External components are not required                                         |
| 25                  | GND              | Backside Paddle. Multiple vias should be employed to minimize inductance and thermal resistance. |

## Recommended Soldering Profile

## Handling Precautions

| Parameter                        | Rating | Standard                           |
|----------------------------------|--------|------------------------------------|
| ESD – Human Body Model (HBM)     | 1A     | ESDA / JEDEC JS-001-2012           |
| ESD – Charged Device Model (CDM) | TBD    | ESDA / JEDEC JS-002-2014           |
| MSL – Convection Reflow 260 °C   | TBD    | JEDEC standard IPC/JEDEC J-STD-020 |

Caution!  
ESD-Sensitive Device

## Solderability

Compatible with the latest version of J-STD-020, Lead-free solder, 260 °C

## RoHS Compliance

This part is compliant with 2011/65/EU RoHS directive (Restrictions on the Use of Certain Hazardous Substances in Electrical and Electronic Equipment) as amended by Directive 2015/863/EU.

This product also has the following attributes:

- Lead Free
- Halogen Free (Chlorine, Bromine)
- Antimony Free
- TBBP-A (C<sub>15</sub>H<sub>12</sub>Br<sub>4</sub>O<sub>2</sub>) Free
- PFOS Free
- SVHC Free
