

Device Overview

The 89HPES4T4G2, a 4-lane 4-port Gen2 PCI Express® switch, is a member of IDT's PRECISE™ family of PCI Express switching solutions. The PES4T4G2 is a peripheral chip that performs PCI Express base switching with a feature set optimized for servers, storage, communications, and consumer applications. It provides connectivity and switching functions between a PCI Express upstream port and three downstream ports or peer-to-peer switching between downstream ports.

Features

- ◆ **High Performance PCI Express Switch**
 - Four Gen2 PCI Express lanes supporting 5 Gbps and 2.5 Gbps operations
 - Four switch ports
 - One x1 upstream port
 - Three x1 downstream ports
 - Low latency cut-through switch architecture
 - Support for Max Payload Size up to 2Kbytes
 - Supports one virtual channel and eight traffic classes
 - PCI Express Base Specification Revision 2.0 compliant
- ◆ **Flexible Architecture with Numerous Configuration Options**
 - Automatic lane reversal on all ports
 - Automatic polarity inversion
 - Ability to load device configuration from serial EEPROM

◆ Legacy Support

- PCI compatible INTx emulation
- Bus locking

◆ Highly Integrated Solution

- Requires no external components
- Incorporates on-chip internal memory for packet buffering and queueing
- Integrates four 5 Gbps embedded SerDes with 8b/10b encoder/decoder (no separate transceivers needed)
 - Receive equalization (RxEQ)

◆ Reliability, Availability, and Serviceability (RAS) Features

- Internal end-to-end parity protection on all TLPs ensures data integrity even in systems that do not implement end-to-end CRC (ECRC)
- Supports ECRC and Advanced Error Reporting
- All internal data and control RAMs are SECDED ECC protected
- Supports PCI Express Native Hot-Plug, Hot-Swap capable I/O
- Compatible with Hot-Plug I/O expanders used on PC motherboards
- Supports Hot-Swap

Block Diagram

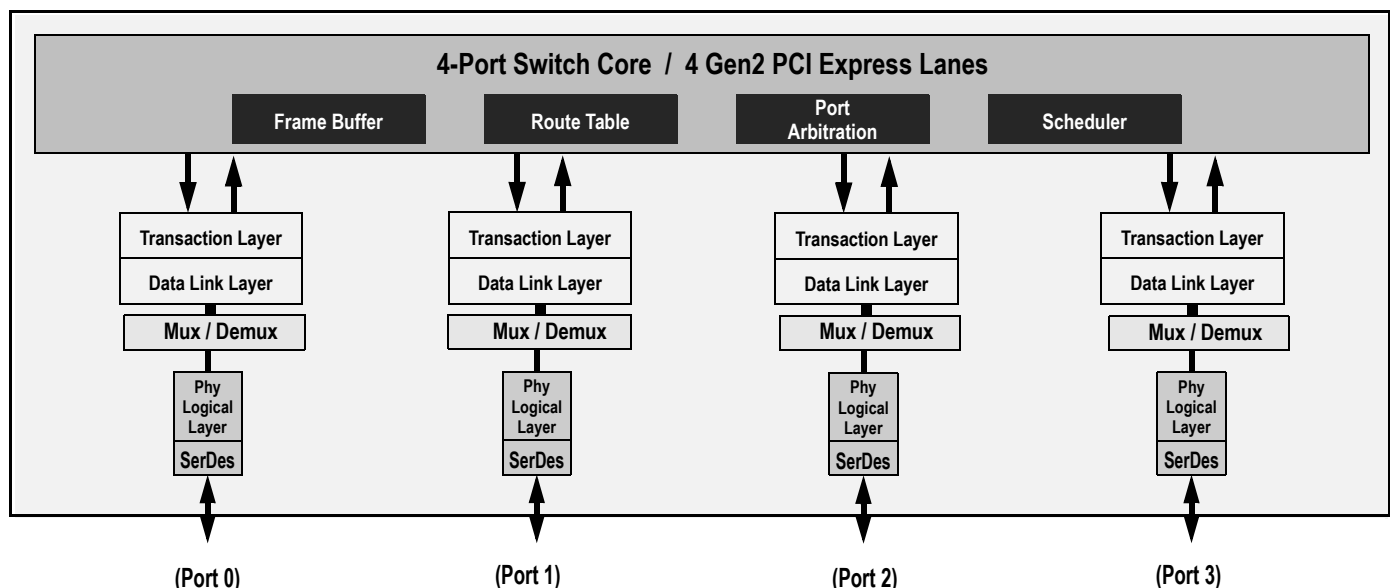

Figure 1 Internal Block Diagram

◆ Power Management

- Utilizes advanced low-power design techniques to achieve low typical power consumption
- Support PCI Power Management Interface specification (PCI-PM 2.0)
 - Supports device power management states: D0, D3_{hot} and D3_{cold}
- Support for PCI Express Active State Power Management (ASPM) link state
 - Supports link power management states: L0, L0s, L1, L2/L3 Ready and L3
- Supports PCI Express Power Budgeting Capability
- Configurable SerDes power consumption
 - Supports optional PCI-Express SerDes Transmit Low-Swing Voltage Mode
 - Supports numerous SerDes Transmit Voltage Margin settings
- Unused SerDes are disabled

◆ Testability and Debug Features

- Built in Pseudo-Random Bit Stream (PRBS) generator
- Numerous SerDes test modes
- Ability to read and write any internal register via the SMBus
- Ability to bypass link training and force any link into any mode
- Provides statistics and performance counters

◆ General Purpose Input/Output Pins

- Each pin may be individually configured as an input or output
- Each pin may be individually configured as an interrupt input
- Some pins have selectable alternate functions

◆ Packaged in a 19mm x 19mm, 324-ball BGA with 1mm ball spacing

Product Description

Utilizing standard PCI Express interconnect the PES4T4G2 provides the most efficient high-performance I/O connectivity device for applications requiring high throughput, low latency and simple board layout. It provides PCI Express connectivity across 4 lanes and 4 ports. Each lane provides 5 Gbps of bandwidth in both directions and is fully compliant with PCI Express Base specification 2.0.

The PES4T4G2 is based on a flexible and efficient layered architecture. The PCI Express layer consists of SerDes, Physical, Data Link and Transaction layers in compliance with PCI Express Base specification Revision 2.0. The PES4T4G2 can operate either as a store and forward or cut-through switch and is designed to switch memory and I/O transactions. It supports eight Traffic Classes (TCs) and one Virtual Channel (VC) with sophisticated resource management to enable efficient switching and I/O connectivity for servers, storage, and embedded processors with limited connectivity.

Figure 2 I/O Expansion Application

SMBus Interface

The PES4T4G2 contains two SMBus interfaces. The slave interface provides full access to the configuration registers in the PES4T4G2, allowing every configuration register in the device to be read or written by an external agent. The master interface allows the default configuration register values of the PES4T4G2 to be overridden following a reset with values programmed in an external serial EEPROM. The master interface is also used by an external Hot-Plug I/O expander.

Two pins make up each of the two SMBus interfaces. These pins consist of an SMBus clock pin and an SMBus data pin. The Master SMBus address is hardwired to 0x50, and the slave SMBus address is hardwired to 0x77.

As shown in Figure 3, the master and slave SMBuses may be used in a unified or split configuration. In the unified configuration, shown in Figure 3(a), the master and slave SMBuses are tied together and the PES4T4G2 acts both as a SMBus master as well as a SMBus slave on this bus. This requires that the SMBus master or processor that has access to PES4T4G2 registers supports SMBus arbitration. In some systems, this SMBus master interface may be implemented using general purpose I/O pins on a processor or micro controller, and may not support SMBus arbitration. To support these systems, the PES4T4G2 may be configured to operate in a split configuration as shown in Figure 3(b).

In the split configuration, the master and slave SMBuses operate as two independent buses and thus multi-master arbitration is never required. The PES4T4G2 supports reading and writing of the serial EEPROM on the master SMBus via the slave SMBus, allowing in system programming of the serial EEPROM.

Figure 3 SMBus Interface Configuration Examples

Hot-Plug Interface

The PES4T4G2 supports PCI Express Hot-Plug on each downstream port. To reduce the number of pins required on the device, the PES4T4G2 utilizes an external I/O expander, such as that used on PC motherboards, connected to the SMBus master interface. Following reset and configuration, whenever the state of a Hot-Plug output needs to be modified, the PES4T4G2 generates an SMBus transaction to the I/O expander with the new value of all of the outputs. Whenever a Hot-Plug input changes, the I/O expander generates an interrupt which is received on the IOEXPINTN input pin (alternate function of GPIO) of the PES4T4G2. In response to an I/O expander interrupt, the PES4T4G2 generates an SMBus transaction to read the state of all of the Hot-Plug inputs from the I/O expander.

General Purpose Input/Output

The PES4T4G2 provides 7 General Purpose Input/Output (GPIO) pins that may be used by the system designer as bit I/O ports. Each GPIO pin may be configured independently as an input or output through software control. Most GPIO pins are shared with other on-chip functions. These alternate functions may be enabled via software, SMBus slave interface, or serial configuration EEPROM.

Pin Description

The following tables list the functions of the pins provided on the PES4T4G2. Some of the functions listed may be multiplexed onto the same pin. The active polarity of a signal is defined using a suffix. Signals ending with an "N" are defined as being active, or asserted, when at a logic zero (low) level. All other signals (including clocks, buses, and select lines) will be interpreted as being active, or asserted, when at a logic one (high) level.

| Signal | Type | Name/Description |
|------------------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PE0RP[0] PE0RN[0] | I | PCI Express Port 0 Serial Data Receive. Differential PCI Express receive pair for port 0. Port 0 is the upstream port. |
| PE0TP[0] PE0TN[0] | O | PCI Express Port 0 Serial Data Transmit. Differential PCI Express transmit pair for port 0. Port 0 is the upstream port. |
| PE1RP[0] PE1RN[0] | I | PCI Express Port 1 Serial Data Receive. Differential PCI Express receive pair for port 1. |
| PE1TP[0] PE1TN[0] | O | PCI Express Port 1 Serial Data Transmit. Differential PCI Express transmit pair for port 1. |
| PE2RP[0] PE2RN[0] | I | PCI Express Port 2 Serial Data Receive. Differential PCI Express receive pair for port 2. |
| PE2TP[0] PE2TN[0] | O | PCI Express Port 2 Serial Data Transmit. Differential PCI Express transmit pair for port 2. |
| PE3RP[0] PE3RN[0] | I | PCI Express Port 3 Serial Data Receive. Differential PCI Express receive pair for port 3. |
| PE3TP[0] PE3TN[0] | O | PCI Express Port 3 Serial Data Transmit. Differential PCI Express transmit pair for port 3. |
| PEREFCLKP PEREFCLKN | I | PCI Express Reference Clock. Differential reference clock pair input. This clock is used as the reference clock by on-chip PLLs to generate the clocks required for the system logic and on-chip SerDes. The frequency of the differential reference clock is set at 100MHz. |

Table 1 PCI Express Interface Pins

| Signal | Type | Name/Description |
|---------|------|--------------------------------------------------------------------------------------------------------------------------------------|
| MSMBCLK | I/O | Master SMBus Clock. This bidirectional signal is used to synchronize transfers on the master SMBus which operates at 400 KHz. |
| MSMBDAT | I/O | Master SMBus Data. This bidirectional signal is used for data on the master SMBus which operates at 400 KHz. |
| SSMBCLK | I/O | Slave SMBus Clock. This bidirectional signal is used to synchronize transfers on the slave SMBus. |
| SSMBDAT | I/O | Slave SMBus Data. This bidirectional signal is used for data on the slave SMBus. |

Table 2 SMBus Interface Pins

| Signal | Type | Name/Description |
|---------------|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GPIO[0] | I/O | General Purpose I/O. This pin can be configured as a general purpose I/O pin. Alternate function pin name: P2RSTN Alternate function pin type: Output Alternate function: Reset output for downstream port 2. |
| GPIO[1] | I/O | General Purpose I/O. This pin can be configured as a general purpose I/O pin. |
| GPIO[2] | I/O | General Purpose I/O. This pin can be configured as a general purpose I/O pin. Alternate function pin name: IOEXPINTN0 Alternate function pin type: Input Alternate function: I/O expander interrupt 0 input. |
| GPIO[7] | I/O | General Purpose I/O. This pin can be configured as a general purpose I/O pin. Alternate function pin name: GPEN Alternate function pin type: Output Alternate function: General Purpose Event (GPE) output |
| GPIO[8] | I/O | General Purpose I/O. This pin can be configured as a general purpose I/O pin. Alternate function pin name: P1RSTN Alternate function pin type: Output Alternate function: Reset output for downstream port 1 |
| GPIO[9] | I/O | General Purpose I/O. This pin can be configured as a general purpose I/O pin. Alternate function pin name: P3RSTN Alternate function pin type: Output Alternate function: Reset output for downstream port 3 |
| GPIO[10] | I/O | General Purpose I/O. This pin can be configured as a general purpose I/O pin. |

Table 3 General Purpose I/O Pins

| Signal | Type | Name/Description |
|-------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CCLKDS | I | Common Clock Downstream. The assertion of this pin indicates that all downstream ports are using the same clock source as that provided to downstream devices. This bit is used as the initial value of the Slot Clock Configuration bit in all of the Link Status Registers for downstream ports. The value may be overridden by modifying the SCLK bit in each downstream port's PCIELSTS register. |
| CCLKUS | I | Common Clock Upstream. The assertion of this pin indicates that the upstream port is using the same clock source as the upstream device. This bit is used as the initial value of the Slot Clock Configuration bit in the Link Status Register for the upstream port. The value may be overridden by modifying the SCLK bit in the P0_PCIELSTS register. |
| PERSTN | I | Fundamental Reset. Assertion of this signal resets all logic inside PES4T4G2 and initiates a PCI Express fundamental reset. |
| SWMODE[2:0] | I | Switch Mode. These configuration pins determine the PES4T4G2 switch operating mode. 0x0 - Normal switch mode 0x1 - Normal switch mode with Serial EEPROM initialization 0x2 - through 0x7 Reserved These pins should be static and not change following the negation of PERSTN. |

Table 4 System Pins

| Signal | Type | Name/Description |
|-------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| JTAG_TCK | I | JTAG Clock. This is an input test clock used to clock the shifting of data into or out of the boundary scan logic or JTAG Controller. JTAG_TCK is independent of the system clock with a nominal 50% duty cycle. |
| JTAG_TDI | I | JTAG Data Input. This is the serial data input to the boundary scan logic or JTAG Controller. |
| JTAG_TDO | O | JTAG Data Output. This is the serial data shifted out from the boundary scan logic or JTAG Controller. When no data is being shifted out, this signal is tri-stated. |
| JTAG_TMS | I | JTAG Mode. The value on this signal controls the test mode select of the boundary scan logic or JTAG Controller. |
| JTAG_TRST_N | I | JTAG Reset. This active low signal asynchronously resets the boundary scan logic and JTAG TAP Controller. An external pull-up on the board is recommended to meet the JTAG specification in cases where the tester can access this signal. However, for systems running in functional mode, one of the following should occur: 1) actively drive this signal low with control logic 2) statically drive this signal low with an external pull-down on the board |

Table 5 Test Pins

| Signal | Type | Name/Description |
|----------------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| REFRES0 | I/O | Port 0 External Reference Resistor. Provides a reference for the Port 0 SerDes bias currents and PLL calibration circuitry. A 3 kOhm +/- 1% resistor should be connected from this pin to ground. |
| REFRES1 | I/O | Port 1 External Reference Resistor. Provides a reference for the Port 1 SerDes bias currents and PLL calibration circuitry. A 3 kOhm +/- 1% resistor should be connected from this pin to ground. |
| REFRES2 | I/O | Port 2 External Reference Resistor. Provides a reference for the Port 2 SerDes bias currents and PLL calibration circuitry. A 3 kOhm +/- 1% resistor should be connected from this pin to ground. |
| REFRES3 | I/O | Port 3 External Reference Resistor. Provides a reference for the Port 3 SerDes bias currents and PLL calibration circuitry. A 3 kOhm +/- 1% resistor should be connected from this pin to ground. |
| V _{DD} CORE | I | Core V_{DD}. Power supply for core logic. |
| V _{DD} I/O | I | I/O V_{DD}. LVTTTL I/O buffer power supply. |
| V _{DD} PEA | I | PCI Express Analog Power. Serdes analog power supply (1.0V). |
| V _{DD} PEHA | I | PCI Express Analog High Power. Serdes analog power supply (2.5V). |
| V _{DD} PETA | I | PCI Express Transmitter Analog Voltage. Serdes transmitter analog power supply (1.0V). |
| V _{SS} | I | Ground. |

Table 6 Power, Ground, and SerDes Resistor Pins

Pin Characteristics

Note: Some input pads of the PES4T4G2 do not contain internal pull-ups or pull-downs. Unused inputs should be tied off to appropriate levels. This is especially critical for unused control signal inputs which, if left floating, could adversely affect operation. Also, any input pin left floating can cause a slight increase in power consumption.

| Function | Pin Name | Type | Buffer | I/O Type | Internal Resistor ¹ | Notes | |

System Clock Parameters

Values based on systems running at recommended supply voltages and operating temperatures, as shown in Tables 12 and 14.

| Parameter | Description | Condition | Min | Typical | Max | Unit |
|--------------------------|----------------------------------------------------------------------|--------------|-------|---------|------------------|------|
| Refclk _{FREQ} | Input reference clock frequency range | | 100 | | 100 ¹ | MHz |
| T _{C-RISE} | Rising edge rate | Differential | 0.6 | | 4 | V/ns |
| T _{C-FALL} | Falling edge rate | Differential | 0.6 | | 4 | V/ns |
| V _{IH} | Differential input high voltage | Differential | +150 | | | mV |
| V _{IL} | Differential input low voltage | Differential | | | -150 | mV |
| V _{CROSS} | Absolute single-ended crossing point voltage | Single-ended | +250 | | +550 | mV |
| V _{CROSS-DELTA} | Variation of V _{CROSS} over all rising clock edges | Single-ended | | | +140 | mV |
| V _{RB} | Ring back voltage margin | Differential | -100 | | +100 | mV |
| T _{STABLE} | Time before V _{RB} is allowed | Differential | 500 | | | ps |
| T _{PERIOD-AVG} | Average clock period accuracy | | -300 | | 2800 | ppm |
| T _{PERIOD-ABS} | Absolute period, including spread-spec-trum and jitter | | 9.847 | | 10.203 | ns |
| T _{CC-JITTER} | Cycle to cycle jitter | | | | 150 | ps |
| V _{MAX} | Absolute maximum input voltage | | | | +1.15 | V |
| V _{MIN} | Absolute minimum input voltage | | -0.3 | | | V |
| Duty Cycle | Duty cycle | | 40 | | 60 | % |
| Rise/Fall Matching | Single ended rising Refclk edge rate versus falling Refclk edge rate | | | 20 | | % |
| Z _{C-DC} | Clock source output DC impedance | | 40 | | 60 | Ω |

Table 8 Input Clock Requirements

| T _{RX-LF-RMS} | 10 KHz to 1.5 MHz RMS jitter (common clock) | NA | | | | | 4.2 | ps |
| T _{RX-MIN-PULSE} | Minimum receiver instantaneous eye width | NA | | | 0.6 | | | UI |

Table 9 PCIe AC Timing Characteristics (Part 2 of 2)

¹. Minimum, Typical, and Maximum values meet the requirements under PCI Specification 2.0

| Signal | Symbol | Reference Edge | Min | Max | Unit | Timing Diagram Reference |
|-----------------------------|------------------------------|----------------|-----|-----|------|--------------------------|
| GPIO | | | | | | |
| GPIO[10:7,2:0] ¹ | T _{pw} ² | None | 50 | — | ns | |

Table 10 GPIO AC Timing Characteristics

¹. GPIO signals must meet the setup and hold times if they are synchronous or the minimum pulse width if they are asynchronous.

². The values for this symbol were determined by calculation, not by testing.

| Signal | Symbol | Reference Edge | Min | Max | Unit | Timing Diagram Reference |
|----------------------------------|----------------------|------------------|------|------|------|--------------------------|
| JTAG | | | | | | |
| JTAG_TCK | Tper_16a | none | 50.0 | — | ns | See Figure 5. |
| | Thigh_16a, Tlow_16a | | 10.0 | 25.0 | ns | |
| JTAG_TMS ¹ , JTAG_TDI | Tsu_16b | JTAG_TCK rising | 2.4 | — | ns | |
| | Thld_16b | | 1.0 | — | ns | |
| JTAG_TDO | Tdo_16c | JTAG_TCK falling | — | 20 | ns | |
| | Tdz_16c ² | | — | 20 | ns | |
| JTAG_TRST_N | Tpw_16d ² | none | 25.0 | — | ns | |

Table 11 JTAG AC Timing Characteristics

¹ The JTAG specification, IEEE 1149.1, recommends that JTAG_TMS should be held at 1 while the signal applied at JTAG_TRST_N changes from 0 to 1. Otherwise, a race may occur if JTAG_TRST_N is deasserted (going from low to high) on a rising edge of JTAG_TCK when JTAG_TMS is low, because the TAP controller might go to either the Run-Test/Idle state or stay in the Test-Logic-Reset state.

² The values for this symbol were determined by calculation, not by testing.

Figure 5 JTAG AC Timing Waveform

Recommended Operating Supply Voltages

| Symbol | Parameter | Minimum | Typical | Maximum | Unit |
|----------------|-----------------------------------------|---------|---------|---------|------|
| $V_{DD}CORE$ | Internal logic supply | 0.9 | 1.0 | 1.1 | V |
| $V_{DD}I/O$ | I/O supply except for SerDes LVPECL/CML | 3.135 | 3.3 | 3.465 | V |
| $V_{DD}PEA^1$ | PCI Express Analog Power | 0.95 | 1.0 | 1.1 | V |
| $V_{DD}PEHA^2$ | PCI Express Analog High Power | 2.25 | 2.5 | 2.75 | V |
| $V_{DD}PETA^1$ | PCI Express Transmitter Analog Voltage | 0.95 | 1.0 | 1.1 | V |
| V_{SS} | Common ground | 0 | 0 | 0 | V |

Table 12 PES4T4G2 Operating Voltages

¹ $V_{DD}PEA$ and $V_{DD}PETA$ should have no more than $25mV_{peak-peak}$ AC power supply noise superimposed on the 1.0V nominal DC value.

² $V_{DD}PEHA$ should have no more than $50mV_{peak-peak}$ AC power supply noise superimposed on the 2.5V nominal DC value.

Absolute Maximum Voltage Rating

| Core Supply | PCIe Analog Supply | PCIe Analog High Supply | PCIe Transmitter Supply | I/O Supply |
|-------------|--------------------|-------------------------|-------------------------|------------|
| 1.5V | 1.5V | 4.6V | 1.5V | 4.6V |

Table 13 PES4T4G2 Absolute Maximum Voltage Rating

Warning: For proper and reliable operation in adherence with this data sheet, the device should not exceed the recommended operating voltages in Table 12. The absolute maximum operating voltages in Table 13 are offered to provide guidelines for voltage excursions outside the recommended voltage ranges. Device functionality is not guaranteed at these conditions and sustained operation at these values or any exposure to voltages outside the maximum range may adversely affect device functionality and reliability.

Power-Up/Power-Down Sequence

During power supply ramp-up, $V_{DD}CORE$ must remain at least 1.0V below $V_{DD}I/O$ at all times. There are no other power-up sequence requirements for the various operating supply voltages.

The power-down sequence can occur in any order.

Recommended Operating Temperature

| Grade | Temperature |
|------------|------------------------|
| Commercial | 0°C to +70°C Ambient |
| Industrial | -40°C to +85°C Ambient |

Table 14 PES4T4G2 Operating Temperatures

Power Consumption

Typical power is measured under the following conditions: 25°C Ambient, 35% total link usage on all ports, typical voltages defined in Table 12 (and also listed below).

Maximum power is measured under the following conditions: 70°C Ambient, 85% total link usage on all ports, maximum voltages defined in Table 12 (and also listed below).

| Number of active Lanes per Port | | Core Supply | | PCIe Analog Supply | | PCIe Analog High Supply | | PCIe Termination Supply | | I/O Supply | | Total | |
|---------------------------------|-------|-------------|----------|--------------------|----------|-------------------------|-----------|-------------------------|----------|------------|------------|-----------|-----------|
| | | Typ 1.0V | Max 1.1V | Typ 1.0V | Max 1.1V | Typ 2.5V | Max 2.75V | Typ 1.0V | Max 1.1V | Typ 3.3V | Max 3.465V | Typ Power | Max Power |

Table 15 PES4T4G2 Power Consumption

Thermal Considerations

This section describes thermal considerations for the PES4T4G2 (19mm² FCBGA324 package). The data in Table 16 below contains information that is relevant to the thermal performance of the PES4T4G2 switch.

| Symbol | Parameter | Value | Units | Conditions |
|--------------------------|---------------------------------------------------|-------|-------|----------------|
| $T_{J(max)}$ | Junction Temperature | 125 | °C | Maximum |
| $T_{A(max)}$ | Ambient Temperature | 70 | °C | Maximum |
| $\theta_{JA(effective)}$ | Effective Thermal Resistance, Junction-to-Ambient | 16.8 | °C/W | Zero air flow |
| | | 10.1 | °C/W | 1 m/S air flow |
| | | 9.2 | °C/W | 2 m/S air flow |
| θ_{JB} | Thermal Resistance, Junction-to-Board | 4.1 | °C/W | |
| θ_{JC} | Thermal Resistance, Junction-to-Case | 0.3 | °C/W | |
| P | Power Dissipation of the Device | 2.31 | Watts | Maximum |

Table 16 Thermal Specifications for PES4T4G2, 19x19 mm FCBGA324 Package

Note: It is important for the reliability of this device in any user environment that the junction temperature not exceed the $T_{J(max)}$ value specified in Table 16. Consequently, the effective junction to ambient thermal resistance (θ_{JA}) for the worst case scenario must be maintained below the value determined by the formula:

$$\theta_{JA} = (T_{J(max)} - T_{A(max)})/P$$

Given that the values of $T_{J(max)}$, $T_{A(max)}$, and P are known, the value of desired θ_{JA} becomes a known entity to the system designer. How to achieve the desired θ_{JA} is left up to the board or system designer, but in general, it can be achieved by adding the effects of θ_{JC} (value provided in Table 16), thermal resistance of the chosen adhesive (θ_{CS}), that of the heat sink (θ_{SA}), amount of airflow, and properties of the circuit board (number of layers and size of the board). As a general guideline, this device will not need a heat sink if the board has 8 or more layers AND the board size is larger than 4"x12" AND airflow in excess of 0.5 m/s is available. It is strongly recommended that users perform their own thermal analysis for their own board and system design scenarios.

DC Electrical Characteristics

Values based on systems running at recommended supply voltages, as shown in Table 12.

Note: See Table 7, Pin Characteristics, for a complete I/O listing.

| I/O Type | Parameter | Description | Gen1 | | | Gen2 | | | Unit | Condi- tions | |
|----------------------------|----------------------------------------------------------------|---------------------------------------------------------|------------------|------------------|------------------|------------------|------------------|------------------|------|-----------------|----------------|
| | | | Min ¹ | Typ ¹ | Max ¹ | Min ¹ | Typ ¹ | Max ¹ | | | |
| Serial Link | PCIe Transmit | | | | | | | | | | |
| | V _{TX-DIFFp-p} | Differential peak-to-peak output voltage | 800 | | 1200 | 800 | | 1200 | mV | | |
| | V _{TX-DIFFp-p-LOW} | Low-Drive Differential Peak to Peak Output Voltage | 400 | | 1200 | 400 | | 1200 | mV | | |
| | V _{TX-DE-RATIO-3.5dB} | De-emphasized differential output voltage | -3 | | -4 | -3.0 | -3.5 | -4.0 | dB | | |
| | V _{TX-DE-RATIO-6.0dB} | De-emphasized differential output voltage | NA | | | -5.5 | -6.0 | -6.5 | dB | | |
| | V _{TX-DC-CM} | DC Common mode voltage | 0 | | 3.6 | 0 | | 3.6 | V | | |
| | V _{TX-CM-ACP} | RMS AC peak common mode output voltage | | | 20 | | | | mV | | |
| | V _{TX-CM-DC-active-idle-delta} | Abs delta of DC common mode voltage between L0 and idle | | | 100 | | | 100 | mV | | |
| | V _{TX-CM-DC-line-delta} | Abs delta of DC common mode voltage between D+ and D- | | | 25 | | | 25 | mV | | |
| | V _{TX-Idle-DiffP} | Electrical idle diff peak output | | | 20 | | | 20 | mV | | |
| | RL _{TX-DIFF} | Transmitter Differential Return loss | 10 | | | | | | 10 | dB | 0.05 - 1.25GHz |
| | | | | | | | | | 8 | dB | 1.25 - 2.5GHz |
| | RL _{TX-CM} | Transmitter Common Mode Return loss | 6 | | | | | 6 | dB | | |
| | Z _{TX-DIFF-DC} | DC Differential TX impedance | 80 | 100 | 120 | | | 120 | Ω | | |
| | V _{TX-CM-ACpp} | Peak-Peak AC Common | NA | | | | | 100 | mV | | |
| | V _{TX-DC-CM} | Transmit Driver DC Common Mode Voltage | 0 | | 3.6 | 0 | | 3.6 | V | | |
| V _{TX-RCV-DETECT} | The amount of voltage change allowed during Receiver Detection | | | 600 | | | 600 | mV | | | |
| I _{TX-SHORT} | Transmitter Short Circuit Current Limit | 0 | | 90 | | | | 90 | mA | | |

Table 17 DC Electrical Characteristics (Part 1 of 2)

| I/O Type | Parameter | Description | Gen1 | | | Gen2 | | | Unit | Condi- tions |

NOTES:

- 1 ALL DIMENSIONING AND TOLERANCING CONFORM TO ANSI Y14.5M-1982
- 2 "e" REPRESENTS THE BASIC SOLDER BALL GRID PITCH
- 3 "M" REPRESENTS THE MAXIMUM SOLDER BALL MATRIX SIZE
- 4 "N" REPRESENTS THE BALLCOUNT NUMBER

△ DIMENSION "b" IS MEASURED AT THE MAXIMUM SOLDER BALL DIAMETER, PARALLEL TO PRIMARY DATUM -C-

△ SEATING PLANE AND PRIMARY DATUM -C- ARE DEFINED BY THE SPHERICAL CROWNS OF THE SOLDER BALLS

△ "A1" ID CORNER MUST BE IDENTIFIED BY CHAMFER, INK MARK, METALLIZED MARKING, INDENTATION OR OTHER FEATURE ON PACKAGE BODY

△ EXACT SHAPE OF EACH CORNER IS OPTIONAL

9 ALL DIMENSIONS ARE IN MILLIMETERS

Revision History

January 15, 2009: Publication of final data sheet.

February 11, 2009: Revised AC Timing Characteristics table and DC Electrical Characteristics table to correct typos.

March 6, 2009: Added industrial temperature.

April 7, 2009: In Valid Combinations, changed ZB to ZC silicon for commercial temperature.

April 17, 2009: In Table 15, Power Dissipation value was changed to 2.31.

February 2, 2010: Added new section Absolute Maximum Voltage Rating with table.

September 13, 2010: In Table 7, changed Buffer type for PCI Express from CML to PCIe differential and changed reference clocks to HCSL.

March 30, 2011: In Table 12, added VddPETA to footnote #1.

May 23, 2013: In the Features section, added reference to SECDED ECC under Reliability, Availability, Serviceability bullet.

Ordering Information

| Product Family | Operating Voltage | Device Family | Product Detail | Generation Series | Device Revision | Package | Temp Range | |
|----------------|-------------------|---------------|----------------|-------------------|-----------------|---------|------------|---------------------------------------------------|
| Blank | | | | | | | | Commercial Temperature (0°C to +70°C Ambient) |
| I | | | | | | | | Industrial Temperature (-40° C to +85° C Ambient) |
| AL | | | | | | | | 324-ball FCBGA |
| ALG | | | | | | | | 324-ball FCBGA, Green |
| ZC | | | | | | | | ZC revision |
| G2 | | | | | | | | PCIe Gen 2 |
| 4T4 | | | | | | | | 4-lane, 4-port |
| PES | | | | | | | | PCI Express Switch |
| H | | | | | | | | 1.0V +/- 0.1V Core Voltage |
| 89 | | | | | | | | Serial Switching Product |

Legend
 A = Alpha Character
 N = Numeric Character

Valid Combinations

- 89HPES4T4G2ZCAL 324-ball FCBGA package, Commercial Temperature
- 89HPES4T4G2ZCALG 324-ball Green FCBGA package, Commercial Temperature
- 89HPES4T4G2ZCALI 324-ball FCBGA package, Industrial Temperature
- 89HPES4T4G2ZCALGI 324-ball Green FCBGA package, Industrial Temperature
