

# STEVAL-ILL026V1

## 3 W non-isolated offline LED driver demonstration board based on the VIPer22A-E

Data brief

### Features

- Input voltage: 90 to 265 V<sub>RMS</sub>
- Provides 350 mA constant current for LEDs
- Capable of driving 3 x 1 W LEDs in series with high-precision constant current ( $\pm 5\%$  tolerance)
- Overtemperature protection
- LED open circuit protection
- LED short-circuit protection
- 230 V<sub>AC</sub> input version with no electrolytic capacitor
- EN55015 & EN6100-3-2 compliant
- RoHS compliant

### Description

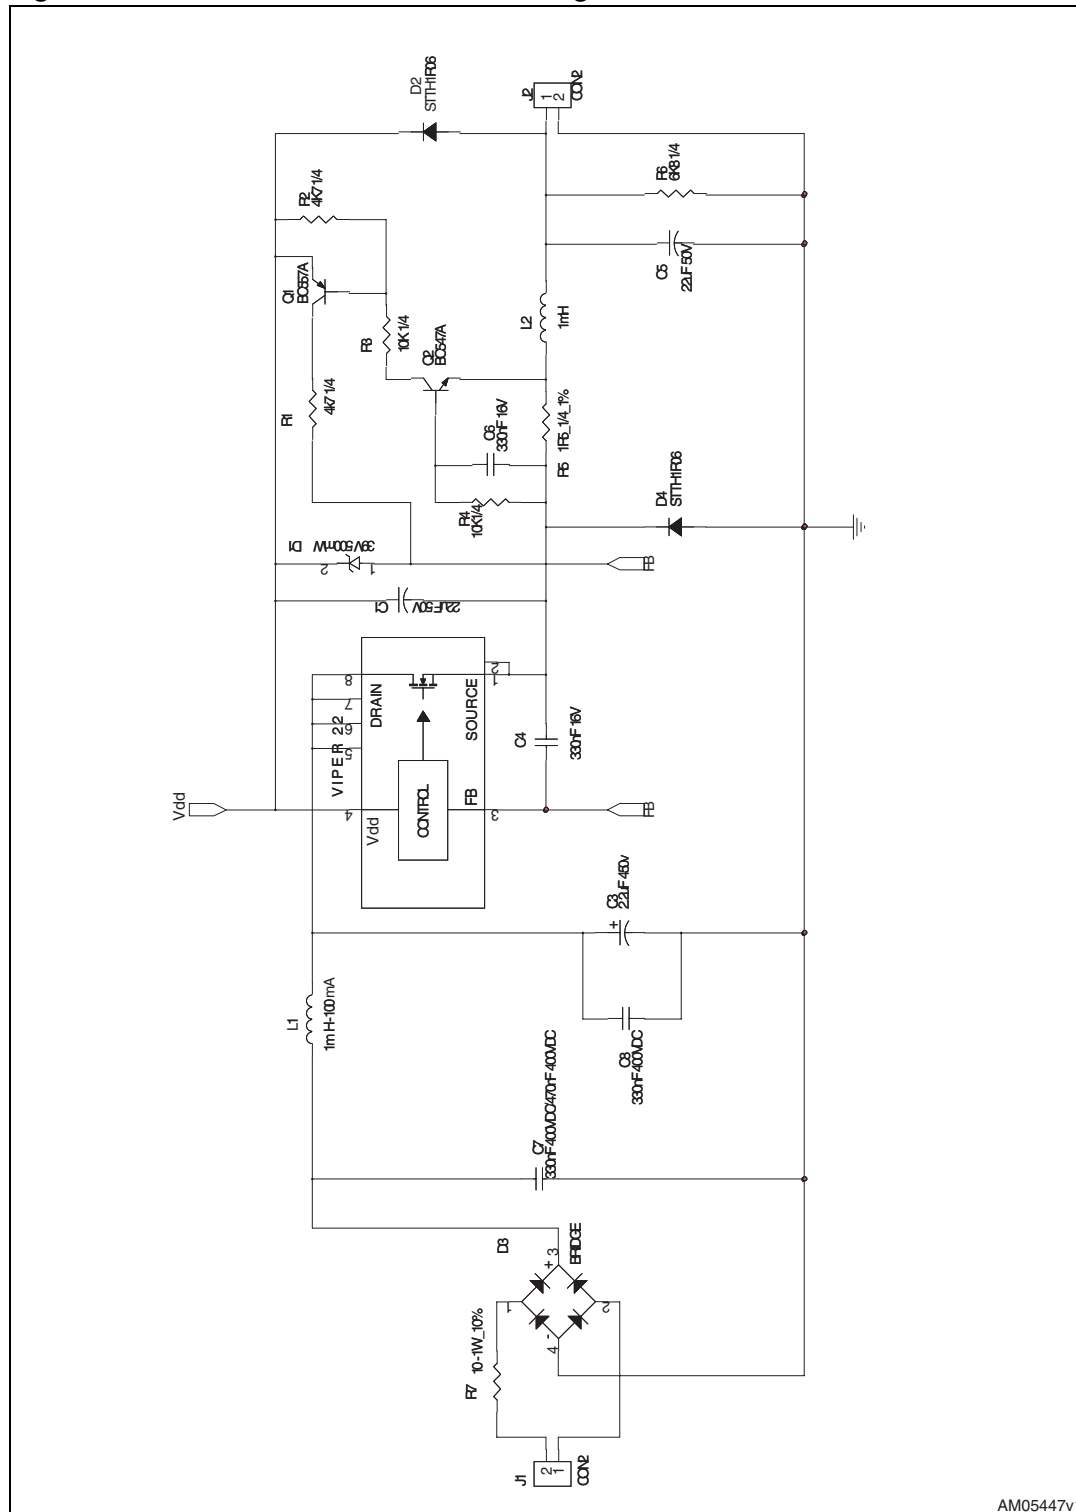

The progress made in the field of LEDs is visible on an almost day-by-day basis. Many high power LEDs are currently on the market, such as 0.7 A and 1 A devices. However, the most commonly used LEDs are those with a current of 0.350 A.

This demonstration board is designed for 350 mA LEDs and is capable of driving three 1 W LEDs in series with high-precision constant current ( $\pm 5\%$  tolerance). The design is based on the VIPer22A-E, which combines a dedicated current mode PWM controller with a high voltage power MOSFET on the same silicon chip.

The internal control circuit offers a large input voltage range on the V<sub>DD</sub> pin, accommodates changes in auxiliary supply voltage, and supports automatic burst mode in low load conditions. The board also features protections against overtemperature, overcurrent and overvoltage conditions.
