Programmable Power

MaxLinear's universal PMICs with programmable power technology offer advanced dynamic control, telemetry and remote reconfigurability. PowerArchitect design and configuration software speeds development and significantly reduces overall time to market compared to legacy analog power solutions. An I²C interface and multiple GPIO pins ensure easy system integration. Configurable warning and fault levels, fault behavior and power up and down sequencing ensure that any load can be properly powered and protected.

Applications

- **FPGA, DSP and ASIC power systems**
- **Base stations**
- **x86 and ARM servers**
- **Networking**
- **Telecommunications**
- **Industrial and embedded systems**

Universal PMIC 3-Output Programmable Buck Regulator Typical Application

Control Power Up/Down Sequencing with Different Delays and Slopes

PowerArchitect – Configuration Software

MaxLinear's PowerArchitect interactive design tool enables you to create a complete 4- to 6-channel optimized power supply design with complex sequencing and advanced power management features, all with a few clicks of the mouse. A free download of PowerArchitect is available at powerxr.exar.com

Evaluation Boards

Evaluation boards for all programmable power management devices are available, along with their user manuals.

Complete Programmable Power Kits Available

Zynq-7000 Power System Featuring XRP7714

Ready-made configurations for:

- Zynq-7XXX
- i.MX5 and i.MX6
- Smartfusion2
- Cyclone IV
- Cyclone V SOC
- Intel Wellsburg

Power Management Solutions for Xilinx® Zynq® UltraScale+™ MPSoC

MaxLinear offers two power management solutions for use with Xilinx Zynq UltraScale+ MPSoC. These solutions reduce rails to as few as possible yet still meet the UltraScale+ spec. These flexible solutions use internal digital control to easily manage sequencing requirements and allow max current to be adjusted quickly and easily. Visit www.exar.com/xilinx for additional information.

Supported Xilinx UltraScale+ Zynq Devices:

ZU2CG, ZU2EG (A), ZU3CG, ZU3EG, ZU4CG, ZU4EG, ZU4EV, ZU5CG, ZU5EG, ZU5EV, ZU6CG, ZU6EG, ZU7CG, ZU7EG, ZU7EV, ZU9CG, ZU9EG, ZU11EG, ZU15EG, ZU17EG, ZU19EG.

Features

- **Manages sequence and dependency**
- **Provides correctly timed Ps_Por_B**
- **Allows PSU Telemetry**
- **Scalable to meet full Zynq UltraScale+ Family**
- **Optimized to power FPGAs in any system**

Scalable Zynq UltraScale+ Always on Solution (No MGTs)

Power Modules

MaxLinear's power modules address high-current solutions for various end applications. These synchronous step-down power modules are complete system-in-package power management solutions with fully integrated power converters including MOSFETs, inductors and internal input and output capacitors. Our XR79xxx modules utilize a patented emulated current mode Constant On-Time (COT) control that provides exceptional full range 0.1% line regulation and 1% output accuracy over the full temperature range. This COT control loop enables operation with ceramic output capacitors, eliminating loop compensation components.

Our QFN modules provide superior thermal performance and manufacturability, all in the smallest footprint. The QFN package makes visual inspection of solder joints possible and eases electrical debugging. At 85°C with no airflow, no thermal de-ratings are required for output voltages of 1.8V and below.

Applications

- FPGA, DSP and ASIC power systems
- Base stations
- Repeaters
- Networking
- Telecommunications
- Industrial and embedded systems

AEC-Q100 Qualified Step-Down Switching Regulators

This family of synchronous step-down regulators combine the controller, drivers, bootstrap diode and MOSFETs in a single package for point-of-load supplies well suited for automotive applications.

Applications

- Automotive infotainment
- Advanced Driver Assistance Systems (ADAS)
- GPS / Navigation systems
- Event data recorders
- Automotive systems

3A, 5A, 8A Step-Down Regulator

Step-Down Regulators >20V

Exar's family of synchronous and non-synchronous step-down regulators provides a fully integrated single-chip solution for Point-of-Load (POL) applications with high current output requirements. With high input voltage range and operating switching frequency options, these regulators fit in a wide range of applications and power architectures by enabling step-down DC/DC conversions from various intermediate power bus levels and providing a highly efficient and high performing solution in the most compact footprint.

Applications

- Distributed power architectures
- Point-of-Load (POL) converters
- Point-of-Load (POL) modules
- FPGAs, DSPs and processor power supplies

15A and 20A Step-Down Regulator

XR76121 Pin Assignment

Step-Down Regulators

Step-down regulators, also known as buck regulators, are used to lower the input voltage to the desired output level with higher efficiency than an LDO. A step-down regulator integrates power FET ICs, providing a monolithic power converter.

Applications

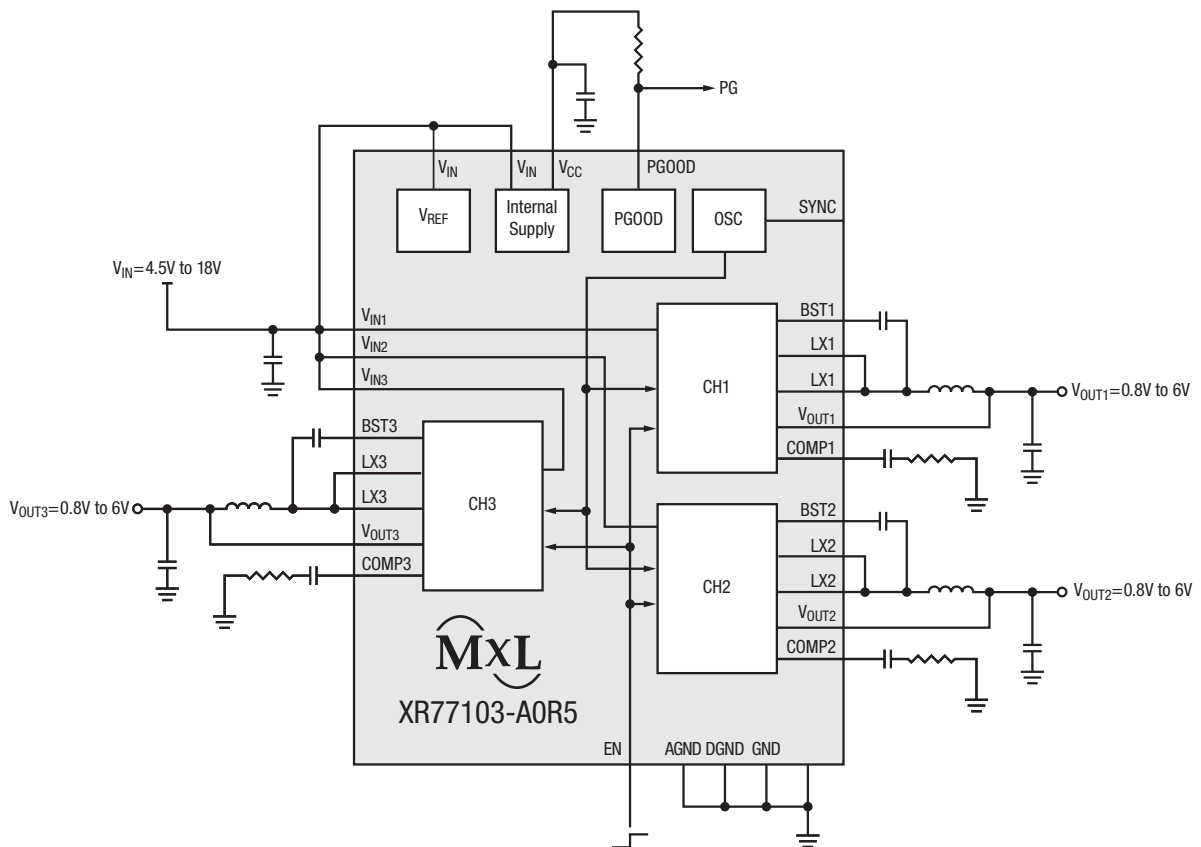

- Distributed power architectures
- Point-of-Load (POL) converters
- Point-of-Load (POL) modules
- FPGAs, DSPs and processor power supplies

Advanced DrMOS

This integrated power stage contains a synchronous buck gate driver packaged with both half bridge MOSFETs. Also known as DrMOS (Driver plus MOSFETs), this package design provides very low thermal impedance and minimizes parasitic inductances resulting in excellent EMI performance.

Applications

- Servers
- Networking equipment
- Industrial PC

LDOs

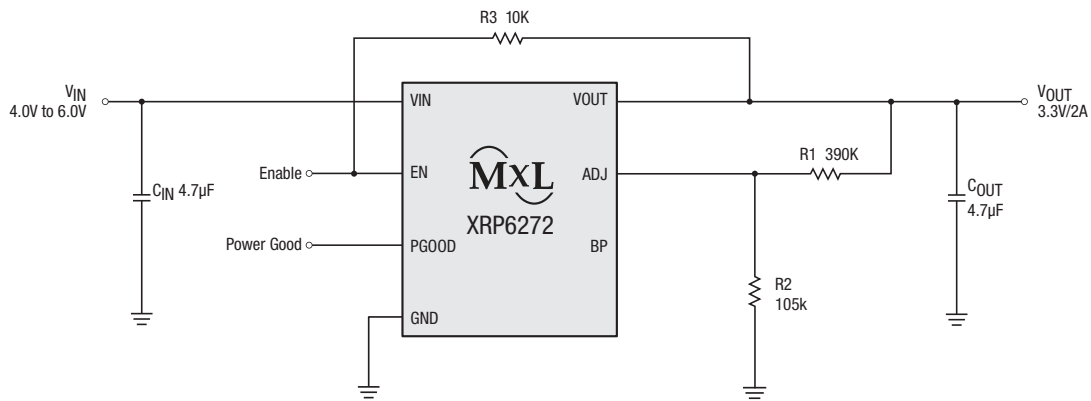

Exar manufactures a broad line of low dropout linear regulators (LDO). The simplest and lowest cost technique for stepping down a DC voltage, LDOs offer a quiet, well-regulated DC voltage supply with excellent transient response.

Applications

- Portable equipment
- Handheld devices
- Mobile phones and PDAs
- Medical and industrial instrumentation

XRP6272 Typical Application

Power Switches

Power switches provide low loss, high efficiency power management, monitoring and fault handling capabilities for any power distribution network. Use of these compact devices results in safer, more stable and more reliable interconnecting systems.

Applications

- USB V_{BUS} power management
- Set-top boxes
- USB peripherals
- Battery charger circuits

Voltage References

Voltage references provide a precise and stable output voltage over a wide range of conditions such as input voltage fluctuations and/or operating temperature change. These devices guarantee system accuracy and performance.

Applications

- Power supplies
- Mother boards
- Medical and industrial instrumentation

Part Number	V_{REF} (V)	Accuracy (%)	Operating Current (mA)	Max Operating Voltage (V)	I_{REF} (μ A)	Operating Temperature Range ($^{\circ}$ C)	Temperature Coefficient (ppm/ $^{\circ}$ C)	Package	Features

Supervisors

Supervisory circuits ensure safe operating conditions for microprocessor and memory-based systems. By monitoring one or more system supplies, supervisory circuits provide basic protection such as power-on reset as well as fault monitoring during power-up, power down and undervoltage (brownout) conditions. Additional functions typically include a watchdog timer, a manual reset and battery backup supply switching.

Applications

- Mother boards
- Telecom and datacom equipment
- Medical and industrial instrumentation

AC Step Drivers

Exar is the world leader in AC step driver solutions for LED bulbs, tubes, troffers, downlights and decorative LED applications. Our patented distributed architecture eliminates the need for magnetics, MOVs and electrolytic capacitors providing robust, cost effective and extremely small solutions with low flicker, high power factor and low THD.

Applications

- Downlight
- High bay
- Specialty
- Architectural

Two-Step LED Current Controller

Switching Regulators

Efficiency, performance, size and reliability are rapidly imposing LEDs as the lighting solution of choice in space-constrained portable electronic equipment as well as in architectural and accent lighting fixtures. Exar's LED lighting products offer compact and efficient solutions for line and battery-operated devices and are capable of driving multiple LEDs in various series or parallel topologies.

Applications

- General lighting and display
- Medical and industrial instrumentation
- Keypad and signage backlighting
