NetKey[®] Fiber Optic Connectors – **Pre-Polished Cam Termination**

specifications

Pre-polished fiber optic connectors are TIA/EIA-604 FOCIS compliant and contain a factory-terminated fiber, eliminating field polishing and adhesive. Pre-polished fiber optic connectors captivate fiber and buffer in one action allowing for up to two re-terminations with no degradation in performance.

technical information

	ST Opticam [®] Connectors	SC Opticam [®] Connectors
Standards compliance:	TIA/EIA-604 FOCIS-2 compliant; exceeds TIA/EIA-568-B.3 requirements	TIA/EIA-604 FOCIS-3 compliant exceeds TIA/EIA-568-B.3 requirements
Fiber compatibility:	62.5/125µm ОМ1, 50/125µm ОМ2, 10Gig [™] 50/125µm laser optimized ОМ3/ОМ4 and 9/125µm OS1/OS2	
Fiber size and type:	900µm tight-buffered fiber; 250µm coated fiber, by using F250BT-C 250 micron fiber build-up tube kit or FO6CB or FO12CB fan-out kit	
Performance:	Insertion loss: Composite 0.3dB average (multimode) Return loss: Composite >20dB (multimode)	

key features and benefits

	ST Opticam [®] Connectors	SC Opticam [®] Connectors	
Factory pre-polished fiber stub end face	Eliminates inconsistent and time-consuming field polishing to deliver required optical performance; reduces termination time (less than half the time of field polish connectors) and the number of installation tools required		
Dual cam design with fiber and buffer clamps	Secures both the fiber and the buffer during the camming step to facilitate consistent termination results; reduces the termination time compared to conventional termination methods Allows up to two re-terminations to achieve optimum termination results; reduces the number of rejected connectors and terminations to provide yield rates approaching 100% for lower installed cost		
Translucent housing assembly	Facilitates inspection of the fiber termination quality; results in rapid installations, improved termination yields, and lower installed costs		
Mechanical cable retention	Consistently provides higher than industry standard cable retention; requires no adhesive, speeding installation		
Non-optical disconnect	_	Maintains data transmission under tensile loads for jacketed cable	
	Opticam® Termination Tool		
Universal termination	Secures both fiber and buffer in one action for all OptiCam [®] Connectors with connector specific cradles (included); ensures fast, consistent, and optimal terminations		
Integrated visual termination indicator (VTI)	Offers visual indication of proper termination after the cam step has been completed; virtually eliminates operator error to deliver a higher yield for a lower installed cost		

applications

- Fiber optic backbone and horizontal applications
- Maintenance or emergency restoration of fiber networks
- · Retrofit/initial install in both behind-the-wall (BTW) permanent side of panelized interconnect and cross-connect
- · Remote areas and confined spaces
- OptiCam[®] Termination Tool gives installers the flexibility to terminate in very close proximity to the application
