### General Description

The Supertex HT0740 is a single channel, high voltage, low input current, isolated driver utilizing Supertex's proprietary HVCMOS® technology. It is designed to drive discrete MOSFETs, configured as high side switches, up to 400V. The HT0740 generates an independent DC isolated voltage across the pair of outputs when the logic input is at a logic high. The HT0740 does not require any external power supplies. The internal supply voltage is supplied from the logic input when it is in the high state.

## Absolute Maximum Ratings

Parameter	Value
Input to output isolation voltage, $V_{ISO}$	$\pm 400V$
Logic input voltage, $V_{IN}$	-0.5 to +7.0V
Operating temperature	-40°C to +85°C
Storage temperature	-55°C to +150°C
Soldering temperature <sup>1</sup>	300°C

Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. Continuous operation of the device at the absolute rating level may affect device reliability. All voltages are referenced to device ground.

**Note 1.** Distance of 1.6mm from case for 10 seconds.
