Chip EMIFIL LC Combined Array Type

NFA18S□□□□□1A45□

Reference Specification

1. Scope

This reference specification applies to Chip EMIFIL LC Combined Array Type NFA18S Series.

2. Part Numbering

NF A 18 SL 307 V 1A 4 5 L
 Product ID Structure Dimension Features Cut-off Frequency Characteristics Rated Voltage Electrode Dimension Packaging Code
 (L×W) (T) (L: Taping / B: Bulk)

3. Rating

Customer Part Number	MURATA Part Number	Cut-off Frequency [MHz]	Insertion Loss (I.L.)(dB)					Insulation Resistance [MΩ min.]	Rated Voltage [V(DC)]	Rated Current [mA(DC)]	Withstanding Voltage [V(DC)]

7. Electrical Performance

No.	Item	Specification	Test Method
7.1	Insertion Loss (I.L.)	Meet item 3.	* Method of measurement based on MIL-STD-220 Insertion Loss = $20 \log (E_0 / E_1)$ E_0 : Level without FILTER (short) E_1 : Level with FILTER
7.2	Insulation Resistance(I.R.)		• Voltage : Rated Voltage • Time : 1 minutes
7.3	Withstanding Voltage	Products shall not be damaged.	• Test Voltage : 30V(DC) • Time : 1 to 5 s • Charge Current : 50 mA max.

8. Mechanical Performance

No.	Item	Specification	Test Method					
8.1	Appearance and Dimensions	Meet item 5.	Visual Inspection and measured with Micrometer caliper and Microscope.					
8.2	Solderability	Electrodes shall be at least 90% covered with new solder coating.	• Flux : Ethanol solution of rosin, 25(wt)% • Pre-heat : 150°C, 60 s • Solder : Sn-3.0Ag-0.5Cu • Solder Temperature : 245 ± 3°C • Immersion Time :3±1 s • Immersion and emersion rates : 25mm / s					
8.3	Resistance to soldering heat	Meet Table 1. <u>Table 1</u> <table><tr><td>Appearance</td><td>No damaged</td></tr><tr><td>Insertion Loss</td><td rowspan="2">meet item 3</td></tr><tr><td>Insulation Resistance</td></tr></table>	Appearance	No damaged	Insertion Loss	meet item 3	Insulation Resistance	• Flux : Ethanol solution of rosin, 25(wt)% • Pre-heat : 150°C, 60 s • Solder : Sn-3.0Ag-0.5Cu • Solder Temperature : 270 ± 5°C • Immersion Time : 10 ± 1 s • Immersion and emersion rates : 25mm / s
Appearance	No damaged							
Insertion Loss	meet item 3							
Insulation Resistance								
8.4	Resistance to soldering heat (Reflow)		• Pre-heat : 150~180°C, 90±30 s • Heating: 230 °C min., 60 s max. • Peak Temperature: 260 °C, 10 s max. • Solder : Sn-3.0Ag-0.5Cu • The number of Times : 2 times					
8.5	Drop	Products shall be no failure after tested.	It shall be dropped on concrete or steel board. • Method: Free fall • Height: 1m • Attitude from which the product is dropped : 3 directions • The Number of Time: 3 times for each direction (Total 9 times)					
8.6	Bonding Strength	The electrodes shall be no failure after tested.	It shall be soldered on the glass-epoxy substrate. • Applying Force (F): 9.8 N • Applying Time : 30 s (in mm)					

Reference Only

Spec. No. JENF243D-0007M-01

P 6/ 12

No.	Item	Specification	Test Method
8.7	Vibration	Meet Table 1.	It shall be soldered on the glass-epoxy substrate. • Oscillation Frequency: 10 to 2000 to 10Hz for 20 minutes. • Total amplitude 1.5 mm or Acceleration amplitude 196m/s^2 whichever is smaller. • Time: A period of 2 hours in each of 3 mutually perpendicular directions. (Total 6 hours)
8.8	Bending Strength	Products shall be no failure after tested.	It shall be soldered on the glass-epoxy substrate ($t = 1.0\text{mm}$). • Deflection: 2.0 mm • Keeping Time: 30 s 

9. Environment Performance

It shall be soldered on the glass-epoxy substrate.

No.	Item	Specification	Test Method
9.1	Temperature Cycling	Meet Table 1.	【NFA18SL307/407/487】 • 1 Cycle 1 step: $-55 \pm {}^0_3 \text{ }^\circ\text{C}$ / $30 \pm {}^3_0$ minutes 2 step: Room Temperature / within 3 minutes 3 step: $+125 \pm {}^3_0 \text{ }^\circ\text{C}$ / $30 \pm {}^3_0$ minutes 4 step: Room Temperature / within 3 minutes • Total of 100 cycles 【NFA18SL137/187/207/227/357/506,NFA18SD】 • 1 Cycle 1 step: $-40 \pm {}^0_3 \text{ }^\circ\text{C}$ / $30 \pm {}^3_0$ minutes 2 step: Room Temperature / within 3 minutes 3 step: $+85 \pm {}^3_0 \text{ }^\circ\text{C}$ / $30 \pm {}^3_0$ minutes 4 step: Room Temperature / within 3 minutes • Total of 100 cycles
9.2	Humidity		• Temperature : $40 \pm 2 \text{ }^\circ\text{C}$ • Humidity : 90 to 95%(RH) • Time : $1000 \pm {}^{48}_0$ hours
9.3	Heat Life		【NFA18SL307/407/487】 • Temperature: $125 \pm 2 \text{ }^\circ\text{C}$ • Test Voltage: Rated Voltage $\times$ 200% • Charge Current: 50 mA max. • Time: $1000 \pm {}^{48}_0$ hours 【NFA18SL137/187/207/227/357/506,NFA18SD】 • Temperature: $85 \pm 2 \text{ }^\circ\text{C}$ • Test Voltage: Rated Voltage $\times$ 200% • Charge Current: 50 mA max. • Time: $1000 \pm {}^{48}_0$ hours
9.4	Cold Resistance		【NFA18SL307/407/487】 • Temperature: $-55 \pm 2 \text{ }^\circ\text{C}$ • Time: $1000 \pm {}^{48}_0$ hours 【NFA18SL137/187/207/227/357/506,NFA18SD】 • Temperature: $-40 \pm 2 \text{ }^\circ\text{C}$ • Time: $1000 \pm {}^{48}_0$ hours

P 7/ 12

10. Tape Packaging

10.1. Appearance and Dimensions (8mm-wide plastic tape)

Dimension of the Cavity is measured at the bottom side.

10.2. Specification of Taping

(1) Packing quantity (standard quantity)

4000 pcs. / reel

(2) Packing Method

Products shall be packaged in the cavity of the plastic tape and sealed with cover tape.

(3) Sprocket Hole

The sprocket holes are to the right as the tape is pulled toward the user.

(4) Spliced point

The cover tape have no spliced point.

(5) Missing components number

Missing components number within 0.1% of the number per reel or 1 pc., whichever is greater, and are not continuous. The specified quantity per reel is kept.

10.3. Pull Strength of Plastic Tape and Cover Tape

Plastic tape	5N min.
Cover tape	10N min.

10.4. Peeling off force of cover tape

0.2N to 0.7N (minimum value is typical)

Speed of Peeling off : 300 mm / min

10.5. Dimensions of Leader-tape, Trailer and Reel

There shall be leader-tape (top tape and empty tape) and trailer-tape (empty tape) as follows.

(in mm)

Reference Only

Spec. No. JENF243D-0007M-01

P 8/ 12

10.6. Marking for reel

Customer part number , MURATA part number , Inspection number(*1) , RoHS marking(*2) , Quantity , etc

*1) « Expression of Inspection No. »

□□ 0000 ×××
(1) (2) (3)

(1) Factory Code

(2) Date

First digit : Year / Last digit of year

Second digit : Month / Jan. to Sep. → 1 to 9, Oct. to Dec. → O, N, D

Third, Fourth digit : Day

(3) Serial No.

*2) « Expression of RoHS marking »

ROHS – Y (Δ)
(1) (2)

(1) RoHS regulation conformity parts.

(2) MURATA classification number

10.7. Marking for Outside package (corrugated paper box)

Customer name , Purchasing Order Number , Customer Part Number , MURATA part number ,
RoHS marking (*2) , Quantity , etc

10.8. Specification of Outer Case

Outer Case Dimensions (mm)			Standard Reel Quantity in Outer Case (Reel)
W	D	H	
186	186	93	5

* Above Outer Case size is typical. It depends on a quantity of an order.

11. Standard Land Dimensions

The chip EMI filter suppresses noise by conducting the high-frequency noise element to ground.

Therefore, to get enough noise reduction, feed through holes which is connected to ground-plane should be arranged according to the figure to reinforce the ground-pattern.

< Standard land dimensions for reflow >

•Side on which chips are mounted

12. ⚠ Caution

Limitation of Applications

Please contact us before using our products for the applications listed below which require especially high reliability for the prevention of defects which might directly cause damage to the third party's life, body or property.

- (1) Aircraft equipment (2) Aerospace equipment (3) Undersea equipment (4) Power plant control equipment
- (5) Medical equipment (6) Transportation equipment(automobiles, trains, ships, etc.) (7) Traffic signal equipment
- (8) Disaster prevention / crime prevention equipment (9) Data-processing equipment
- (10) Applications of similar complexity or with reliability requirements comparable to the applications listed in the above

Reference Only

Spec. No. JENF243D-0007M-01

P 9/ 12

13. Notice

Products can only be soldered with reflow.
This product is designed for solder mounting.
Please consult us in advance for applying other mounting method such as conductive adhesive.

13.1. Mounting direction of a product

In the case of mounting, Polarity Marking should surely serve as the upper surface.
When mounted upside down, since the Polarity Marking is formed with the conductor, it has a possibility that the short-circuit between terminals may occur.

13.2. Flux and Solder

Flux	Use rosin-based flux, Do not use highly acidic flux (with chlorine content exceeding 0.2(wt)%). Do not use water soluble flux.
Solder	Use Sn-3.0Ag-0.5Cu solder

Other flux (except above) Please contact us for details, then use.

13.3. Note for Assembling

< Thermal Shock >

Pre-heating should be in such a way that the temperature difference between solder and products surface is limited to 100°C max. Also cooling into solvent after soldering should be in such a way that the temperature difference is limited to 100°C max.

13.4. Attention Regarding P.C.B. Bending

The following shall be considered when designing P.C.B.'s and laying out products.

- (1) P.C.B. shall be designed so that products are not subject to the mechanical stress for board warpage.
[Products direction]

Products shall be located in the sideways direction (Length: $a < b$) to the mechanical stress.

(2) Components location on P.C.B. separation.

It is effective to implement the following measures, to reduce stress in separating the board.
It is best to implement all of the following three measures; however, implement as many measures as possible to reduce stress.

Contents of Measures	Stress Level
(1) Turn the mounting direction of the component parallel to the board separation surface.	$A > D^{*1}$
(2) Add slits in the board separation part.	$A > B$
(3) Keep the mounting position of the component away from the board separation surface.	$A > C$

*1 $A > D$ is valid when stress is added vertically to the perforation as with Hand Separation. If a Cutting Disc is used, stress will be diagonal to the PCB, therefore $A > D$ is invalid.

(3) Mounting Components Near Screw Holes

When a component is mounted near a screw hole, it may be affected by the board deflection that occurs during the tightening of the screw. Mount the component in a position as far away from the screw holes as possible.

13.5. Pre-heating Temperature

Soldering shall be handled so that the difference between pre-heating temperature and solder temperature shall be limited to 100°C max. to avoid the heat stress for the products.

13.6. Reflow Soldering

1) Soldering paste printing for reflow

- Standard thickness of solder paste: 100µm to 150µm.
- Use the solder paste printing pattern of the below pattern.
- For the resist and copper foil pattern, use standard land dimensions.

Standard printing pattern of solder paste.

2) Soldering Conditions

Standard soldering profile and the limit soldering profile is as follows.

The excessive limit soldering conditions may cause leaching of the electrode and / or resulting in the deterioration of product quality.

	Standard Profile	Limit Profile
Pre-heating	150~180°C 、 90s±30s	
Heating	above 220°C、 30s~60s	above 230°C、 60s max.
Peak temperature	245±3°C	260°C,10s
Cycle of reflow	2 times	2 times

13.7. Reworking with Soldering iron

The following conditions shall be strictly followed when using a soldering iron.

- Pre-heating : 150°C, 1 min
- Tip temperature : 350°C max.
- Soldering time : 3(+1,-0) s
- Soldering iron output : 30W max.
- Tip diameter : ϕ 3mm max.
- Times : 2times max.

Note : Do not directly touch the products with the tip of the soldering iron in order to prevent the crack on the ceramic material due to the thermal shock.

Reference Only

Spec. No. JENF243D-0007M-01

P 11/ 12

13.8. Solder Volume

Solder shall be used not to be exceeded as shown below.

Accordingly increasing the solder volume, the mechanical stress to product is also increased. Excessive solder volume may cause the failure of mechanical or electrical performance.

13.9. Cleaning Conditions

Products shall be cleaned on the following conditions.

- (1) Cleaning temperature shall be limited to 60°C max. (40°C max. for IPA.)
- (2) Ultrasonic cleaning shall comply with the following conditions, with avoiding the resonance phenomenon at the mounted products and P.C.B.
Power: 20W / l max. Frequency: 28 kHz to 40 kHz Time: 5 minutes max.
- (3) Cleaner
 1. Cleaner
 - Isopropyl alcohol (IPA)
 2. Aqueous agent
 - PINE ALPHA ST-100S
- (4) There shall be no residual flux and residual cleaner after cleaning.
In the case of using aqueous agent, products shall be dried completely after rinse with de-ionized water in order to remove the cleaner.
- (5) Other cleaning
Please contact us.

13.10. Operating Environment

Do not use this product under the following environmental conditions, on deterioration of the performance, such as insulation resistance may result from the use.

- (1) in the corrodible atmosphere (acidic gases, alkaline gases, chlorine, sulfur gases, organic gases and etc.)
- (2) in the atmosphere where liquid such as organic solvent, may splash on the products.
- (3) in the atmosphere where the temperature / humidity changes rapidly and it is easy to dew.

13.11. Resin coating

The capacitance and inductance value may change and/or it may affect on the product's performance due to high cure-stress of resin to be used for coating / molding products. So please pay your careful attention when you select resin. In prior to use, please make the reliability evaluation with the product mounted in your application set.

13.12. Handling of a substrate

After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting to the substrate when cropping the substrate, inserting and removing a connector from the substrate or tightening screw to the substrate.

Excessive mechanical stress may cause cracking in the product.

13.13. Storage condition

(1) Storage period

Use the products within 12 months after delivered.
Solderability should be checked if this period is exceeded.

(2) Storage environment condition

- Products should be stored in the warehouse on the following conditions.
Temperature: -10 to +40°C
Humidity: 15 to 85% relative humidity
No rapid change on temperature and humidity
- Don't keep products in corrosive gases such as sulfur, chlorine gas or acid, or it may cause oxidization of electrode, resulting in poor solderability.
- Products should be stored on the palette for the prevention of the influence from humidity, dust and so on.
- Products should be stored in the warehouse without heat shock, vibration, direct sunlight and so on.
- Products should be stored under the airtight packaged condition.

(3) Delivery

Care should be taken when transporting or handling product to avoid excessive vibration or mechanical shock.
