

AS5161

12-Bit Magnetic Angle Position Sensor

General Description

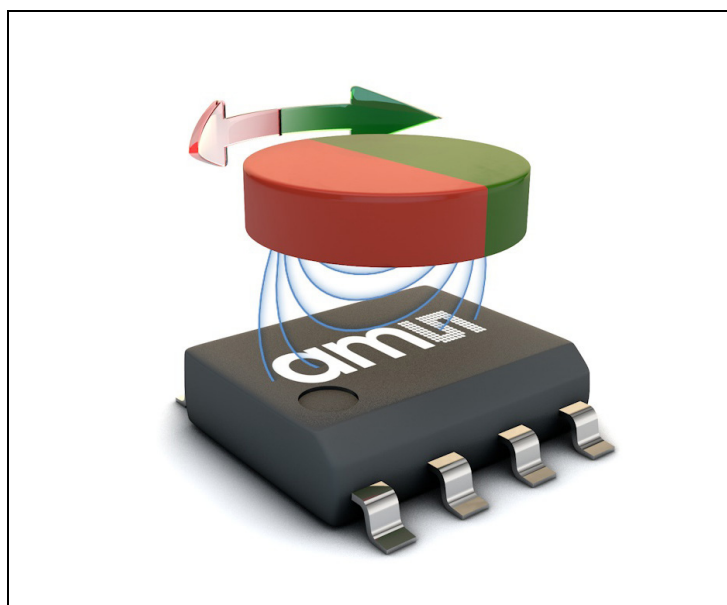

The AS5161 is a contactless magnetic angle position sensor for accurate angular measurement over a full turn of 360°. A sub range can be programmed to achieve the best resolution for the application. It is a system-on-chip, combining integrated Hall elements, analog front end, digital signal processing and best in class automotive protection features in a single device.

To measure the angle, only a simple two-pole magnet, rotating over the center of the chip, is required. The magnet may be placed above or below the IC.

The absolute angle measurement provides instant indication of the magnet's angular position with a resolution of $0.022^\circ = 16384$ positions per revolution. According to this resolution the adjustment of the application specific mechanical positions are possible. The angular output data is available over a 12 bit pulse width modulated (PWM) output.

The AS5161 operates at a supply voltage of 5V and the supply and output pins are protected against overvoltage up to +20V. In addition the supply pins are protected against reverse polarity up to -20V.

Figure 1:
Typical Arrangement of AS5161 and Magnet

Ordering Information and Content Guide appear at end of datasheet.

Key Benefits & Features

The benefits and features of AS5161, 12-Bit Magnetic Angle Position Sensor are listed below:

Figure 2:
Added Value of Using AS5161

Benefits	Features
<ul style="list-style-type: none"> • Great flexibility on angular excursion 	<ul style="list-style-type: none"> • 360° contactless high resolution angular position sensing
<ul style="list-style-type: none"> • Simple programming 	<ul style="list-style-type: none"> • User programmable start and end point of the application region • Saw tooth mode 1-4 slopes per revolution • Clamping levels • Transition point
<ul style="list-style-type: none"> • Failure diagnostics 	<ul style="list-style-type: none"> • Broken GND and VDD detection for all external load cases
<ul style="list-style-type: none"> • High-resolution output signal 	<ul style="list-style-type: none"> • 12-Bit pulse width modulated (PWM) output
<ul style="list-style-type: none"> • Ideal for applications in harsh environments due to contactless position sensing 	<ul style="list-style-type: none"> • Wide temperature range: - 40°C to 150°C

Applications

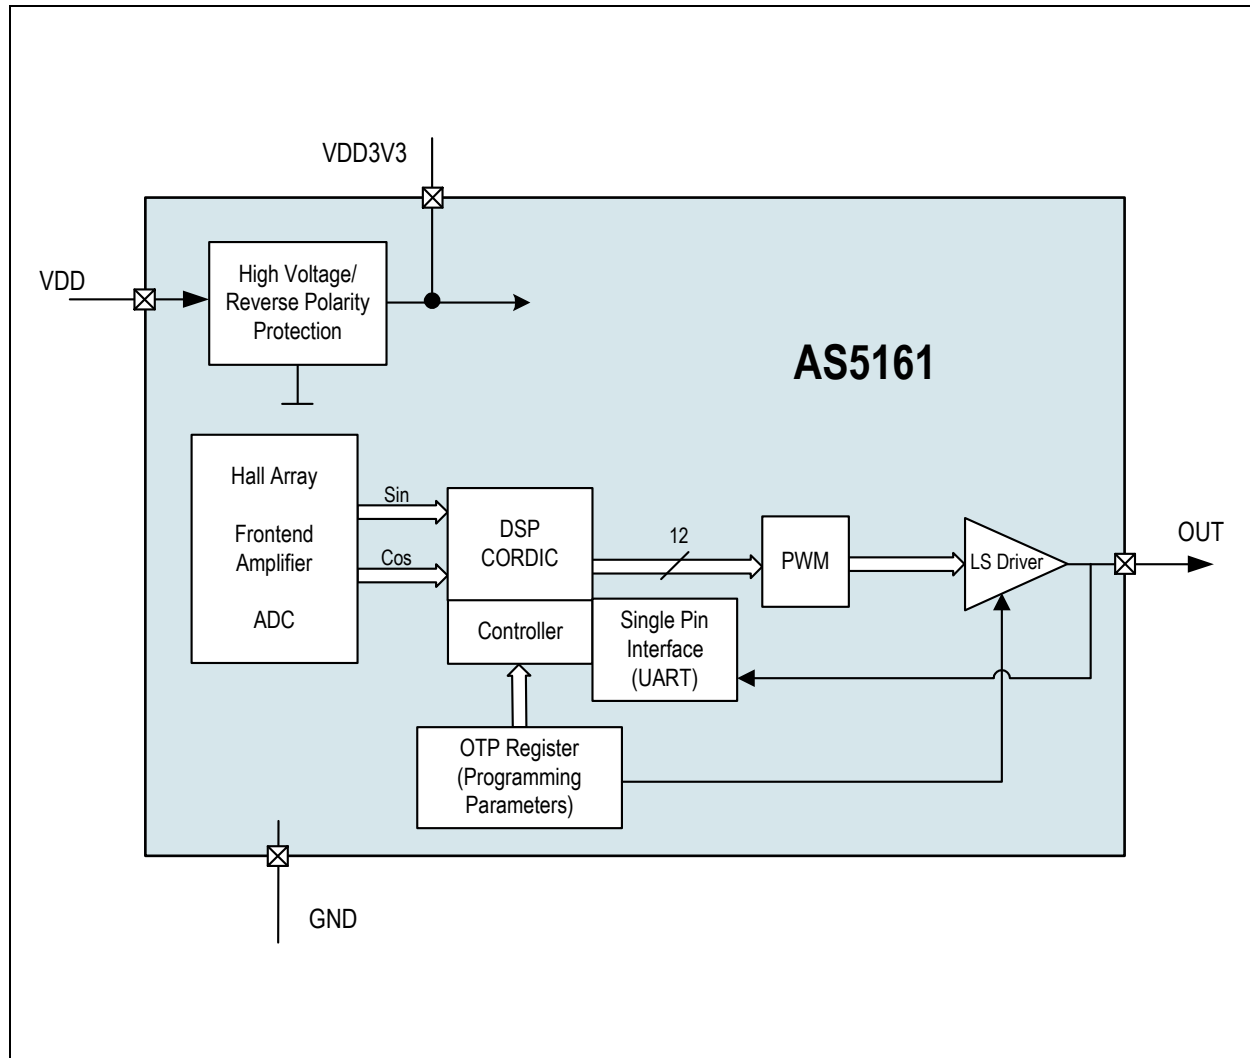

The AS5161 is ideal for automotive applications like:

- Throttle and valve position sensing
- Gearbox position sensor
- Tumble flap
- Chassis height level
- Pedal position sensing
- Contactless potentiometers

Block Diagram

The functional blocks of this device are shown below:

Pin Assignment

Figure 4:
SOIC-8 Pin Configuration

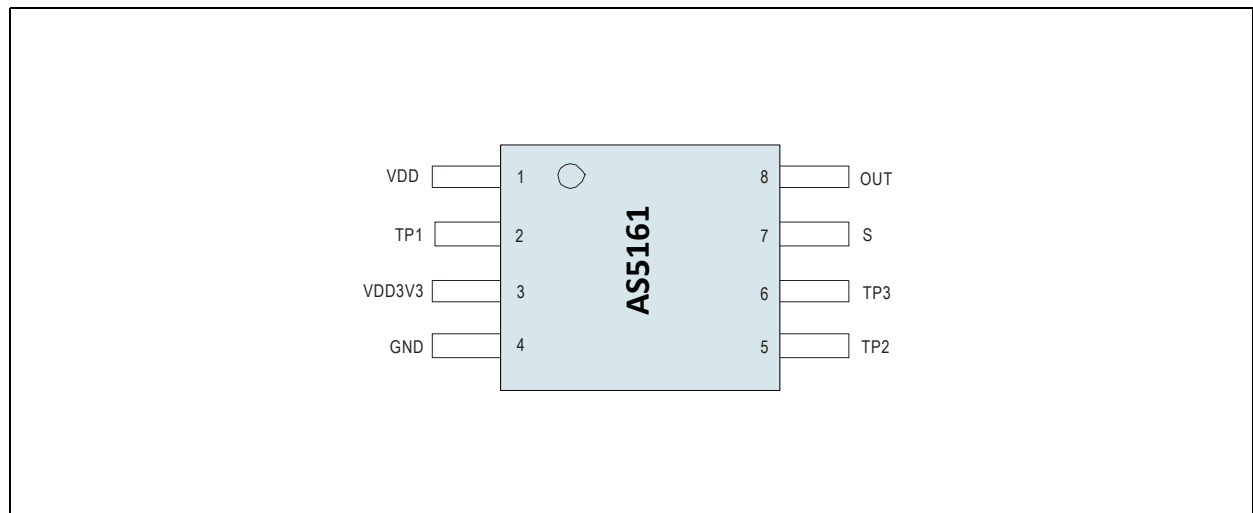

Figure 5:
Pin Description

Pin Number	Pin Name	Pin Type	Description
1	VDD	Supply pin	Positive supply pin. This pin is over voltage protected.
2	TP1	DIO/AIO multi purpose pin	Test pin for fabrication. Connected to ground in the application board.
3	VDD3V3	AIO	Output of the internal voltage regulator
4	GND	Supply pin	Ground pin. Connected to ground in the application.
5	TP2	DIO/AIO multi purpose pin	Test pin for fabrication. Connected to ground in the application board.
6	TP3	DIO/AIO multi purpose pin	Test pin for fabrication. Open in the application.
7	S	AIO	Test pin for fabrication. Connected to OUT in the application board.
8	OUT	DIO/AIO multi purpose pin	Digital PWM output pin. Over this pin the programming is possible. Open drain configuration.

Absolute Maximum Ratings

Stresses beyond those listed in [Absolute Maximum Ratings](#) may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in [Electrical Characteristics](#) is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Figure 6:
Absolute Maximum Ratings

Symbol	Parameter	Min	Max	Units	Comments
Electrical Parameters					
V _{DD}	DC supply voltage at pin VDD Overvoltage	-20	20	V	No operation
V _{OUT}	Output voltage OUT	-0.3	20	V	Permanent

Detailed Description

The AS5161 is manufactured in a CMOS process and uses a spinning current Hall technology for sensing the magnetic field distribution across the surface of the chip.

The integrated Hall elements are placed around the center of the device and deliver a voltage representation of the magnetic field at the surface of the IC.

Through Sigma-Delta Analog / Digital Conversion and Digital Signal-Processing (DSP) algorithms, the AS5161 provides accurate high-resolution absolute angular position information. For this purpose a Coordinate Rotation Digital Computer (CORDIC) calculates the angle and the magnitude of the Hall array signals.

The DSP is also used to provide digital information at the outputs that indicate movements of the used magnet towards or away from the device's surface.

A small low cost diametrically magnetized (two-pole) standard magnet provides the angular position information.

The AS5161 senses the orientation of the magnetic field and calculates a 14-bit binary code. This code is mapped to a programmable output characteristic in a PWM duty cycle format. This signal is available at the pin (**OUT**).

The application angular region can be programmed in a user friendly way. The start angle position **T1** and the end point **T2** can be set and programmed according the mechanical range of the application with a resolution of 14 bits. In addition the **T1Y** and **T2Y** parameter can be set and programmed according the application. The transition point 0 to 360 degree can be shifted using the break point parameter **BP**. The voltage for clamping level low **CLL** and clamping level high **CLH** can be programmed with a resolution of 9 bits. Both levels are individually adjustable.

The output parameters can be programmed in an OTP register. No additional voltage is required to program the AS5161. The setting may be overwritten at any time and will be reset to default when power is cycled. To make the setting permanent, the OTP register must be programmed by using a lock bit the content could be frozen for ever.

The AS5161 is tolerant to magnet misalignment and unwanted external magnetic fields due to differential measurement technique and Hall sensor conditioning circuitry.

Operation

VDD Voltage Monitor

VDD Over Voltage Management. If the supply voltage at pin **VDD** exceeds the over-voltage upper threshold for longer than the detection time the output is turned off. When the over voltage event has passed and the voltage applied to pin **VDD** falls below the over-voltage lower threshold for longer than the recovery time the device enters the normal mode and the output is enabled.

VDD Under Voltage Management. When the voltage applied to the **VDD** pin falls below the under-voltage lower threshold for longer than the detection time the output is turned off. When the voltage applied to the **VDD** pin exceeds the under-voltage upper threshold for longer than the detection time the device enters the normal mode and the output is enabled.

PWM Output

By default (after programmed **CUST_LOCK** OTP bit) the PWM output mode is selected. The pin **OUT** provides a modulated signal that is proportional to the angle of the rotating magnet. Due to an intelligent approach a permanent short circuit will not damage the device. This is also feasible in a high voltage condition up to 20 V and at the highest specified ambient temperature.

After the digital signal processing (DSP) a PWM engine provides the output signal.

The DSP maps the application range to the output characteristic. An inversion of the slope is also programmable to allow inversion of the rotation direction.

An on-chip diagnostic feature handles the error state at the output. Depending on the failure the output is in HiZ condition or indicates a PWM signal within the failure bands of 4 –96% duty cycle (see [Figure 20](#)).

Programming Parameters

The PWM output characteristic is programmable by OTP. Depending on the application, the output can be adjusted. The user can program the following application specific parameters.

Figure 13:
Programming Parameters

Parameter	Description
T1	Mechanical angle start point
T2	Mechanical angle end point
T1Y	% duty cycle level at the T1 position
T2Y	% duty cycle level at the T2 position
CLL	Clamping Level Low
CLH	Clamping Level High
BP	Break point (transition point 0 to 360°)

These parameters are input parameters. Using the available programming software and programmer these parameters are converted and finally written into the AS5161 128 bit OTP memory.

Application Specific Angular Range Programming

The application range can be selected by programming **T1** with a related **T1Y** and **T2** with a related **T2Y** into the AS5161. The clamping levels **CLL** and **CLH** can be programmed independent from the **T1** and **T2** position and both levels can be separately adjusted.

Figure 14:
Programming of an Individual Application Range

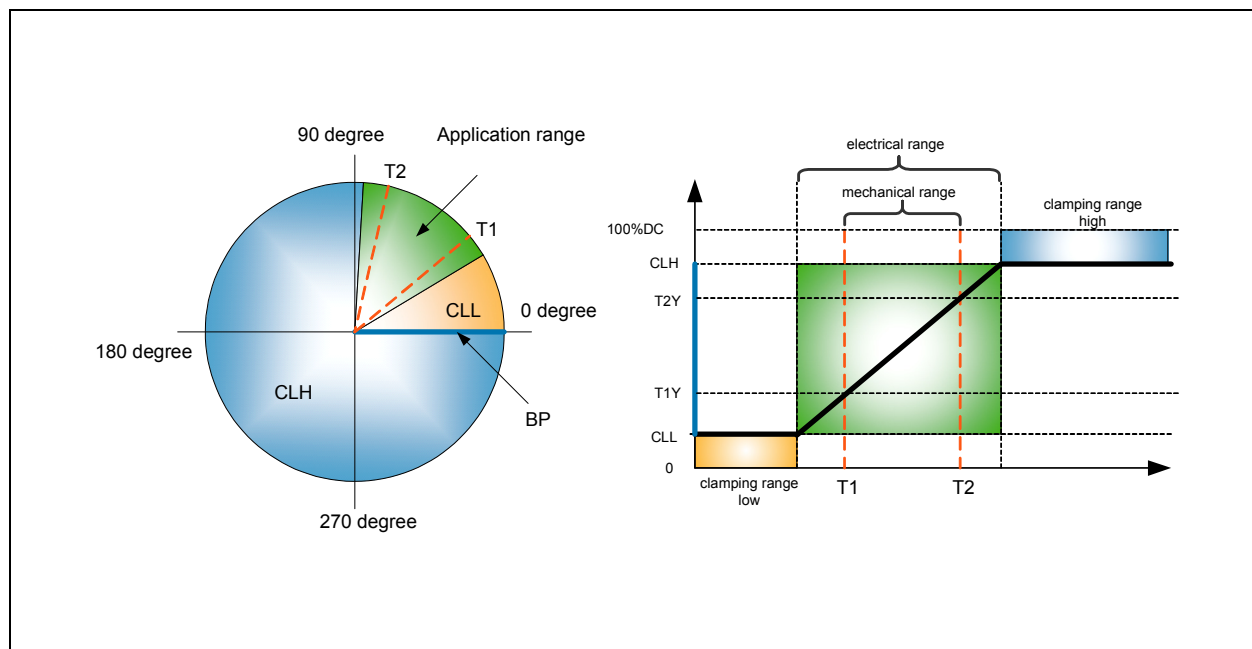

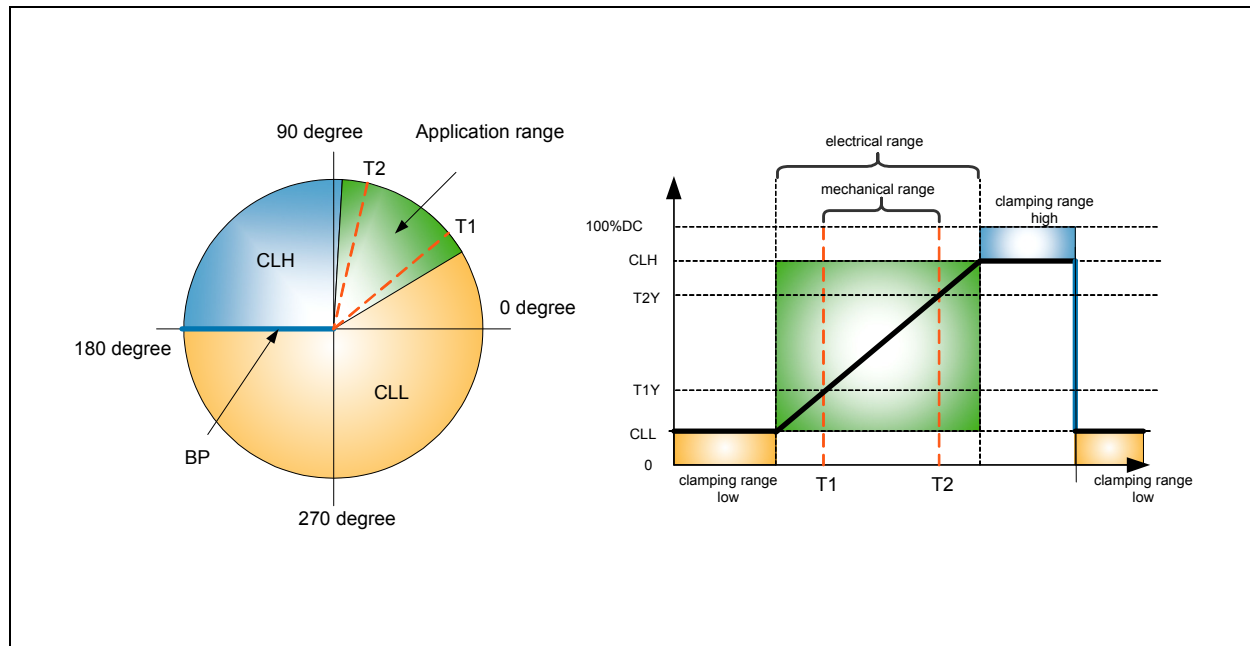

Figure 14 shows a simple example of the selection of the range. The mechanical starting point **T1** and the mechanical end point **T2** are defining the mechanical range. A sub range of the internal CORDIC output range is used and mapped to the needed output characteristic. The PWM output signal has 12 bit, hence the level **T1Y** and **T2Y** can be adjusted with this resolution. As a result of this level and the calculated slope the clamping region low is defined. The break point **BP** defines the transition between **CLL** and **CLH**. In this example the **BP** is set to 0 degree. The **BP** is also the end point of the clamping level high **CLH**. This range is defined by the level **CLH** and the calculated slope. Both clamping levels can be set independently from each other.

Application Specific Programming of the Break Point

The break point **BP** can be programmed as well with 14 bits. This is important when the default transition point is inside the application range. In such a case the default transition point must be shifted out of the application range. The parameter **BP** defines the new position.

Figure 15:
Individual Programming of the Break Point BP

Multiple Slope Output

The AS5161 can be programmed to multiple slopes. Where one programmed reference slope characteristic is copied to multiple slopes. Two, three and four slopes are selectable by the user OTP bits QUADEN (1:0). In addition to the steepness of the slope the clamping levels can be programmed as well.

Figure 16:
Two Slope Mode

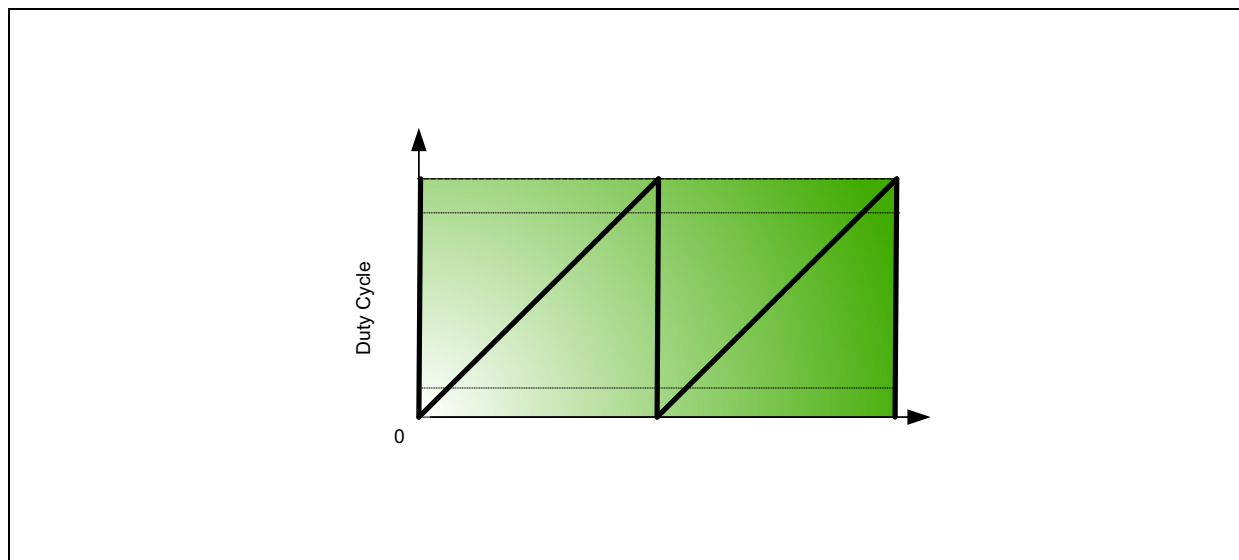

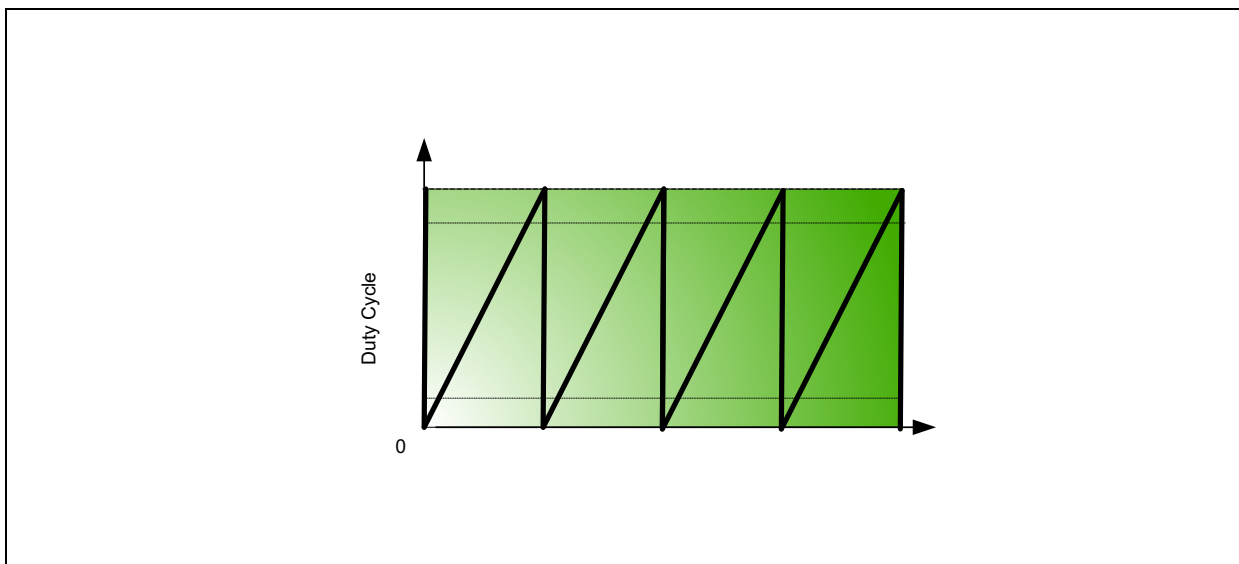

Figure 17:
Four Slope Mode

Resolution of Parameters

The programming parameters have a wide resolution of up to 14 bits.

Figure 18:
Resolution of the Programming Parameters

Symbol	Parameter	Resolution	Note
T1	Mechanical angle start point	14 bits	
T2	Mechanical angle stop point	14 bits	
T1Y	Mechanical start voltage level	12 bits	
T2Y	Mechanical stop voltage level	12 bits	
CLL	Clamping level low	9 bits	
CLH	Clamping level high	9 bits	
BP	Break point	14 bits	

Figure 19:
Overview of the Output Range

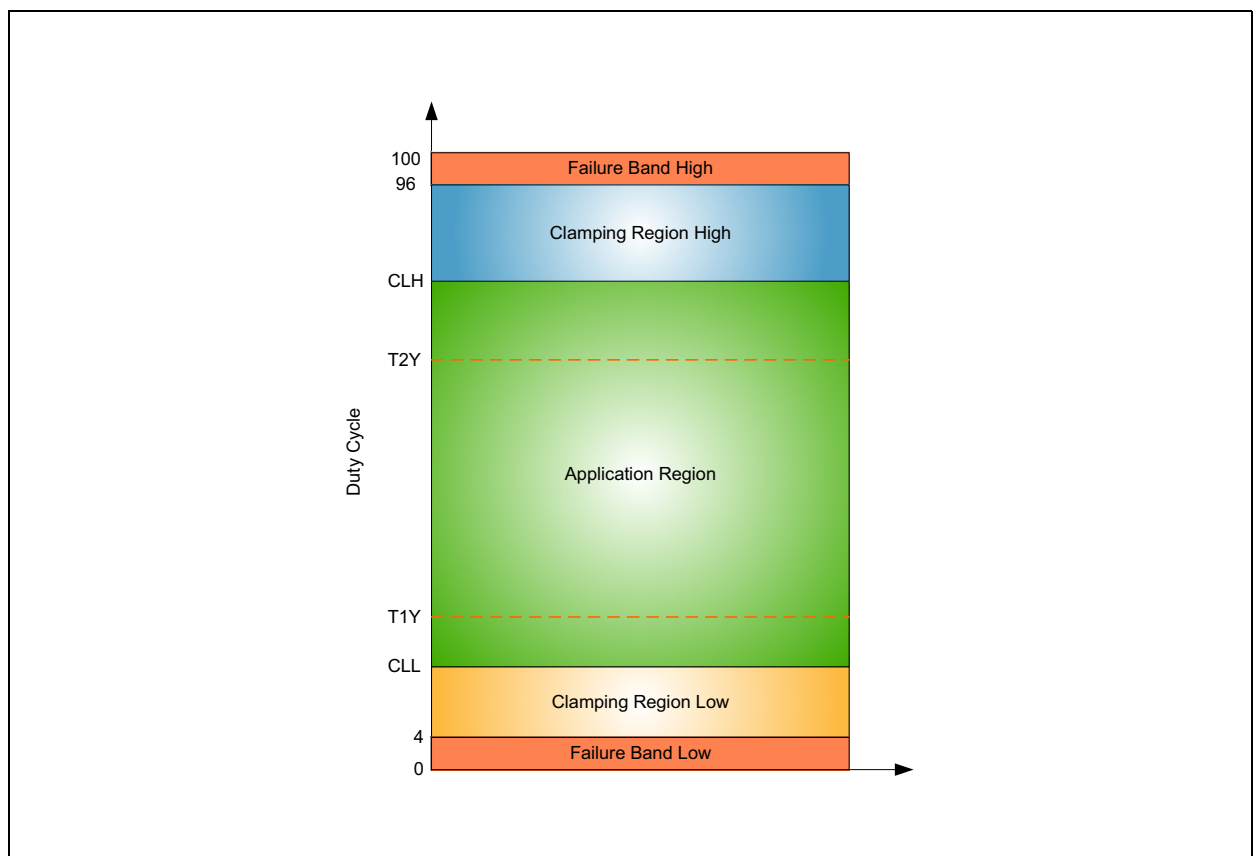

Figure 19 gives an overview of the different ranges. The failure bands are used to indicate a wrong operation of the AS5161. This can be caused due to a broken supply line. By using the

specified load resistors, the output level will remain in these bands during a fail. It is recommended to set the clamping level **CLL** above the lower failure band and the clamping level **CLH** below the higher failure band.

Figure 20:
Different Failure Cases of AS5161

Type	Failure Mode	Symbol	Failure Band	Note
Internal alarms (failures)	Out of magnetic range (too less or too high magnetic input)	MAGRng	High/Low	Programmable by OTP bit DIAG_HIGH
	CORDIC overflow	COF	High/Low	Programmable by OTP bit DIAG_HIGH
	Offset compensation finished	OCF	High/Low	Programmable by OTP bit DIAG_HIGH
	Watchdog fail	WDF	High/Low	Programmable by OTP bit DIAG_HIGH
	Oscillator fail	OF	High/Low	Programmable by OTP bit DIAG_HIGH
Application related failures	Overvoltage condition	OV	High	Dependant on the load resistor Pull up → failure band high
	Broken VDD	BVDD		
	Broken VSS	BVSS		
	Short circuit output	SCO	High	Switch off → short circuit dependent

For efficient use of diagnostics, it is recommended to program to clamping levels **CLL** and **CLH**.

PWM Output Driver Parameters

The output stage is configured in a open drain output.

The PWM duty cycle represents the angular output data. All programming features are available for the PWM mode as well. The PWM period is programmable in four steps and can be programmed by **PWMF<2:0>**.

$C_{LOAD} \leq 33 \text{ nF}$, $R_{PU} = 1 \text{ k}\Omega$ to $10 \text{ k}\Omega$

Figure 21:

PWMVOL	Output voltage low	IOUT=5mA	0		0.4	V
PWMSRF	PWM slew rate (falling edge)	Between 75% and 25% RPUOUT=4K Ω ; CLOUT=1nF VDD=5V	1	2	4	V / μ s

Hysteresis Function

AS5161 device includes a hysteresis function to avoid sudden jumps from CLH to CLL and vice versa caused by noise in the full turn configuration.

The hysteresis amplitude can be selected via the OTP bits **HYSTSEL<1:0>**.

Application Information

Recommended Application Schematic

Figure 22 shows the recommended schematic in the application. All components marked with (*) are optional and can be used to further increase the EMC.

R_{LPU}	OUT pull-up resistance	1		10	k Ω	

Programming the AS5161

The AS5161 programming is a one-time-programming (OTP) method, based on polysilicon fuses. The advantage of this method is that no additional programming voltage is needed. The internal LDO provides the current for programming.

The OTP consists of 128 bits; several bits are available for user programming. In addition factory settings are stored in the OTP memory. Both regions are independently lockable by build in lock bits.

A single OTP cell can be programmed only once. Per default, the cell is "0"; a programmed cell will contain a "1". While it is not possible to reset a programmed bit from "1" to "0", multiple OTP writes are possible, as long as only unprogrammed "0"-bits are programmed to "1".

Independent of the OTP programming, it is possible to overwrite the OTP register temporarily with an OTP write command. This is possible only if the user lock bit is not programmed.

Due to the programming over the output pin the device will initially start in the communication mode. In this mode the digital angle value can be read with a specific protocol format. It is a bidirectional communication possible. Parameters can be written into the device. A programming of the device is triggered by a specific command. With another command (pass2func) the device can be switched into operation mode. In case of a programmed user lock bit the AS5161 automatically starts up in the functional operation mode. No communication of the specific protocol is possible after this.

A standard half duplex UART protocol is used to exchange data with the device in the communication mode.

UART Interface for Programming

The AS5161 uses a standard UART interface with an address byte and two data bytes. The read or write mode is selected with bit R/Wn in the first byte. The timing (baudrate) is selected by the AS5161 over a synchronization frame. The baud rate register can be read and overwritten (optional). Every start bit is used for synchronization.

A time out function detects not complete commands and resets the AS5161 UART after the timeout period.

Frame Organization

Each frame is composed by 24 bits. The first byte of the frame specifies the read/write operation with the register address. 16 data bits contains the communication data. There will be no operation in case of the usage of a not specified CMD. The UART programming interface block of the AS5161 can operate in slave communication or master communication mode. In the slave communication mode the AS5161 receives the data. The programming tool is the driver of the single communication line. In case of the master communication mode the AS5161 transmits data in the frame format. The single communication line can be pulled down by the AS5161.

The UART frame consists of 1 start bit (low level), 8 data bit, 1 even-parity bit and 1 stop bit (high level). Data are transferred from LSB to MSB.

Figure 24:
General UART Frame

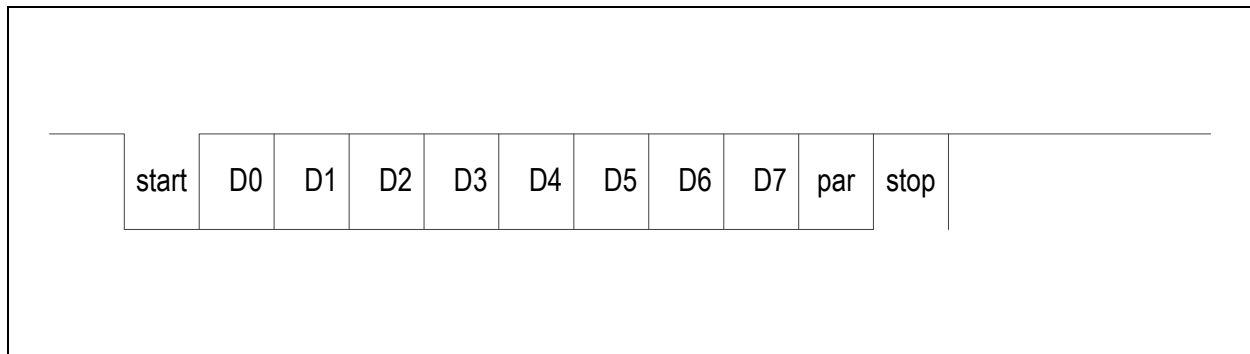

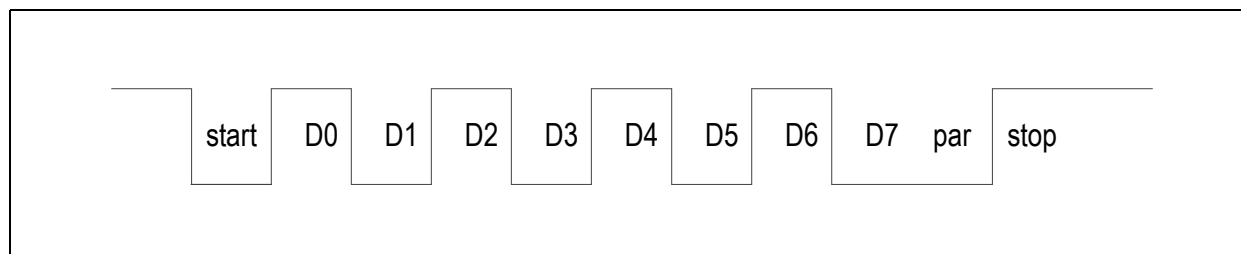

Figure 25:
Bit Timing

Symbol	Parameter	Min	Typ	Max	Unit	Note
START	Start bit		1		TBIT	
Dx	Data bit		1		TBIT	
PAR	Parity bit		1		TBIT	
STOP	Stop bit	1			TBIT	
TSW	Slave/Master Switch Time		7		TBIT	

Each communication starts with the reception of a request from the external controller. The request consists of two frames: one synchronization frame and the command frame.

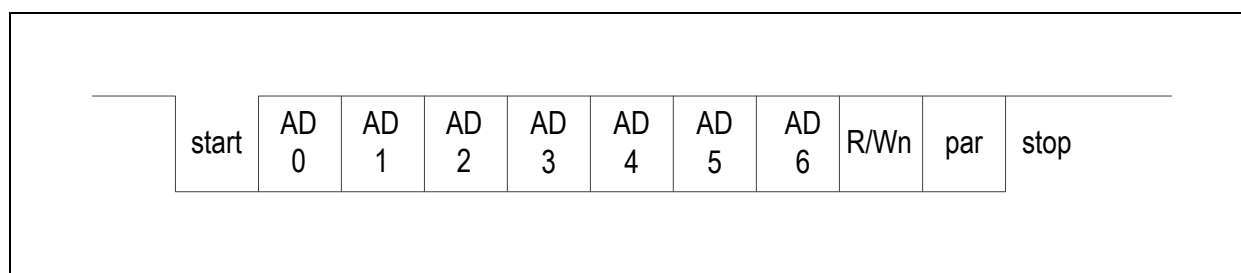

The synchronization frame contains the data 0x55 and allows the UART to measure the external controller baud rate.

Figure 26:
Synchronization Frame

The second frame contains the command Read/ Write (1 bit) and the address (7 bits).

Figure 27:
Address and Command Frame

Only two commands are possible. In case of read command the idle phase between the command and the answer is the time TSW. In case of parity error command is not executed.

Figure 28:
Possible Commands

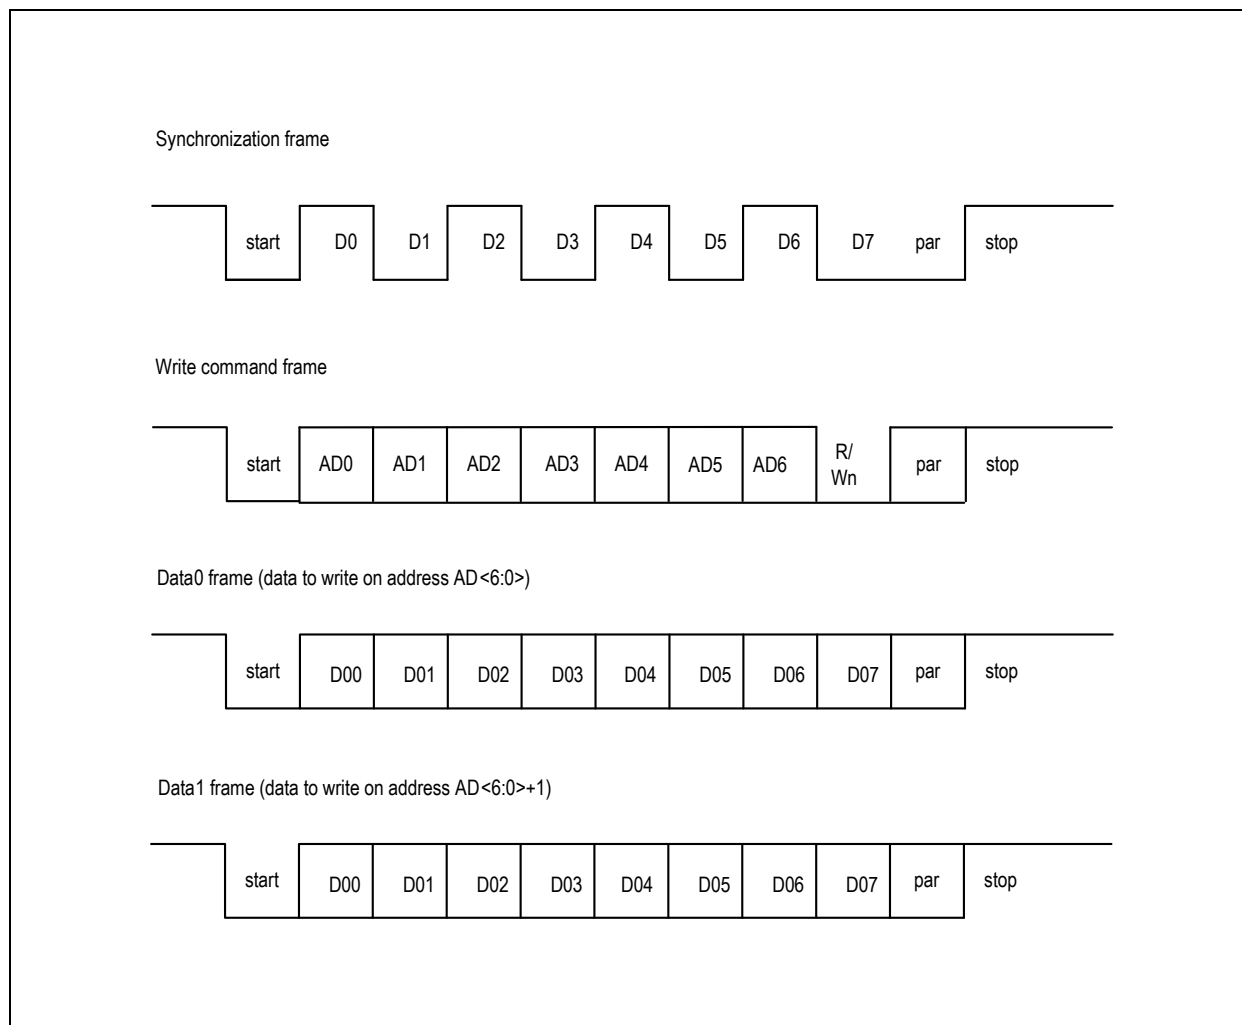

Possible Interface Commands	Description	AS5X63 Communication Mode	Command CMD
WRITE	Write data to the OTP memory or Registers	SLAVE	0
READ	Read data to the OTP memory or Registers	SLAVE & MASTER	1

Note(s) and/or Footnote(s):

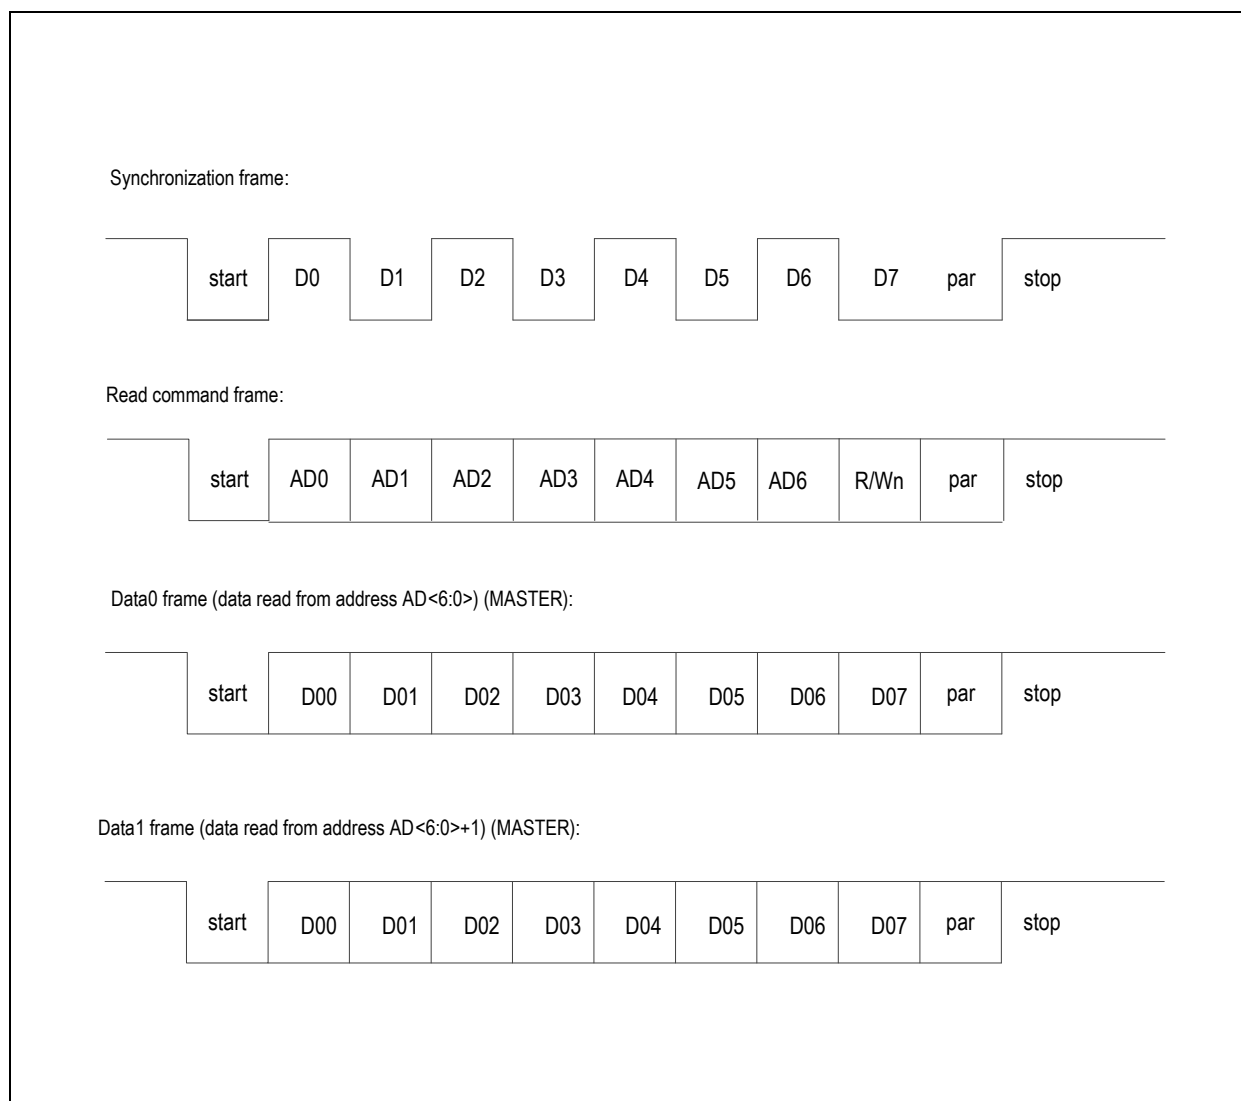

1. In case of Write command the request is followed by the frames containing the data to write.
2. In case of Read command the communication direction will change and the AS5161 will answer with the frames containing the requested data.

WRITE (Command Description)

Figure 29:
Full Write Command

- Writing the AS5161 KEY in the fuse register (address 0x41) triggers the transfer of the data from the OTP RAM into the Poly Fuse cell.
- Writing the AS5161 KEY in the Pass2Func Register (address 0x60) forces the device into normal mode.

READ (Command Description)**Figure 30:
Full Read Command****Baud-Rate Automatic Detection**

The UART includes a built-in baud-rate monitor that uses the synchronization frame to detect the external controller baud-rate. This baud-rate is used after the synchronization byte to decode the following frame and to transmit the answer and it is stored in the BAUDREG register.

Baud-Rate Manual Setting (Optional)

The BAUDREG register can be read and over-written for a possible manual setting of the baud-rate: in case the register is overwritten with a value different from 0, this value will be used for the following UART communications and the synchronization frame must be removed from the request.

	7	AS5161KEY<15>	0		

Data Byte	Bit Number	Symbol	Default	Description	
DATA0 (0x60)	0	AS5161KEY<0>	0	AS5161 KEY<15:0>=0101 0001 0110 0010 A write command with data different from AS5161 KEY is not executed A read command returns all data bits at 0	Pass2Func Register
	1	AS5161KEY<1>	0		
	2	AS5161KEY<2>	0		
	3	AS5161KEY<3>	0		
	4	AS5161KEY<4>	0		
	5	AS5161KEY<5>	0		
	6	AS5161KEY<6>	0		
	7	AS5161KEY<7>	0		
DATA1 (0x61)	0	AS5161KEY<8>	0		
	1	AS5161KEY<9>	0		
	2	AS5161KEY<10>	0		
	3	AS5161KEY<11>	0		
	4	AS5161KEY<12>	0		
	5	AS5161KEY<13>	0		
	6	AS5161KEY<14>	0		
	7	AS5161KEY<15>	0		

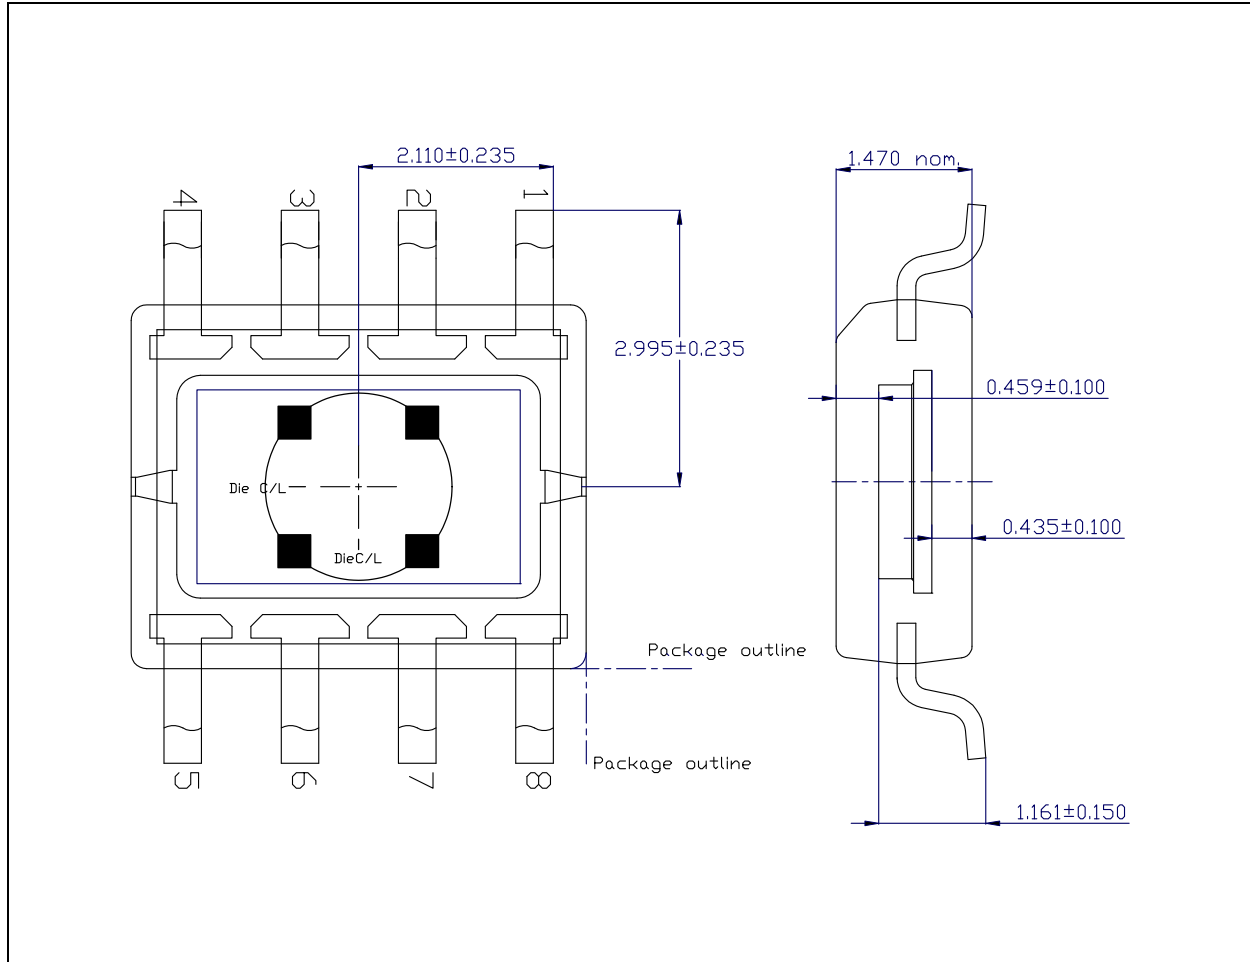

Programming Procedure

- Pull-Up on out pin
- VDD=5V
- Wait 10ms (after the startup time device enters communication mode)
- Write command: Trimming bits are written in the OTP RAM
- Read command: All the trimming bits are read back to check the correctness of the writing procedure.
- Write AS5161KEY in the Fuse register: The OTP RAM content is permanently transferred into the Poly Fuse cells.
- Wait 10 ms (fuse time)
- Write command, R1K_10K<1:0>=(11)b: Poly Fuse cells are downloaded into the RAM memory using a 10K resistance as reference.
- Wait 5 ms (download time)
- Read R1K_10K register, the expected value is 00b
- Write command, R1K_10K<1:0>=(11)b
- Read R1K_10K register, the expected value is (11)b.
NB: Step11 and Step12 have to be consecutive.
- Read command: all the fused bits downloaded with 10K resistance are read back.
- Write command, R1K_10K=<1:0>=(10)b: Poly Fuse cells are downloaded into the RAM memory using a 1K resistance as reference.
- Wait 5 ms (download time)
- Read R1K_10K register, the expected value is (00)b
- Write command register, R1K_10K<1:0>=(10)b
- Read R1K_10K register, the expected value is (10)b
NB: Step18 and Step19 have to be consecutive.
- Read command: All the fused bits downloaded with 1K resistance are read back.
- Check that read commands at Steps 5, 13 and 19 are matching
- Write AS5161KEY in the Pass2Func register: Device enters normal mode.

Mechanical Data

The internal Hall elements are placed in the center of the package on a circle with a radius of 1.25mm.

Figure 37:
Hall Element Positions

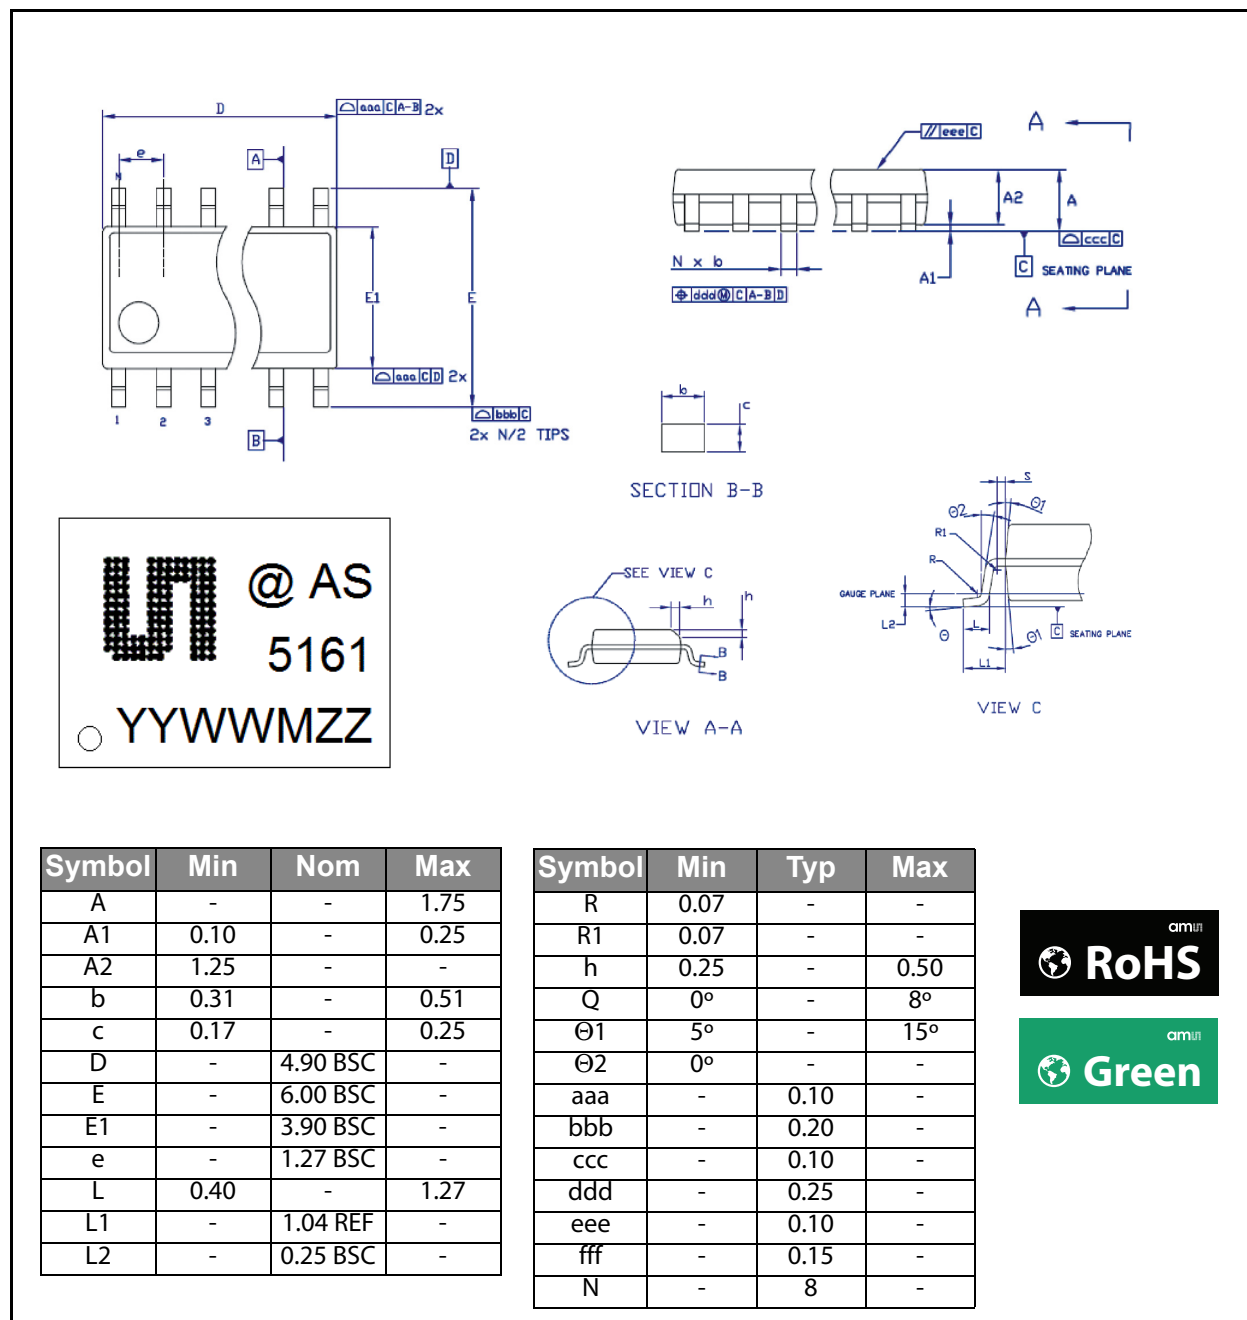

Note(s) and/or Footnote(s):

1. All dimensions in mm.
2. Die thickness 356µm nom.
3. Adhesive thickness $20 \pm 10\mu\text{m}$.
4. Lead frame downest $200 \pm 25\mu\text{m}$.
5. Lead frame thickness $200 \pm 8\mu\text{m}$.

Package Drawings & Markings

The device is available in a SOIC 8 - Lead 150 MIL Package.

Figure 38:
Package Drawings and Dimensions

Note(s) and/or Footnote(s):

1. Dimensions and tolerancing confirm to *ASME Y14.5M-1994*.
2. All dimensions are in millimeters. Angles are in degrees.

Package Marking: @YYWWMZZ

@	YY	WW	M	ZZ
Sublot identifier	Year	Week	Assembly plant identifier	Assembly traceability code

Ordering & Contact Information

The devices are available as the standard products shown in [Figure 40](#).

Figure 40:
Ordering Information

Ordering Code	Description	Package	Delivery Form	Delivery Quantity
AS5161-HSOP	12-Bit Programmable Angle Position Sensor with PWM output	SOIC - 8	Tape & Reel	2500 pcs/reel
AS5161-HSOM				500 pcs/reel

RoHS Compliant & ams Green Statement

RoHS: The term RoHS compliant means that ams AG products fully comply with current RoHS directives. Our semiconductor products do not contain any chemicals for all 6 substance categories, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, RoHS compliant products are suitable for use in specified lead-free processes.

ams Green (RoHS compliant and no Sb/Br): ams Green defines that in addition to RoHS compliance, our products are free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material).

Important Information: The information provided in this statement represents ams AG knowledge and belief as of the date that it is provided. ams AG bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. ams AG has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. ams AG and ams AG suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

Copyrights & Disclaimer

Copyright ams AG, Tobelbader Strasse 30, 8141 Unterpremstaetten, Austria-Europe. Trademarks Registered. All rights reserved. The material herein may not be reproduced, adapted, merged, translated, stored, or used without the prior written consent of the copyright owner.

Devices sold by ams AG are covered by the warranty and patent indemnification provisions appearing in its General Terms of Trade. ams AG makes no warranty, express, statutory, implied, or by description regarding the information set forth herein. ams AG reserves the right to change specifications and prices at any time and without notice. Therefore, prior to designing this product into a system, it is necessary to check with ams AG for current information. This product is intended for use in commercial applications. Applications requiring extended temperature range, unusual environmental requirements, or high reliability applications, such as military, medical life-support or life-sustaining equipment are specifically not recommended without additional processing by ams AG for each application. This product is provided by ams AG "AS IS" and any express or implied warranties, including, but not limited to the implied warranties of merchantability and fitness for a particular purpose are disclaimed.

ams AG shall not be liable to recipient or any third party for any damages, including but not limited to personal injury, property damage, loss of profits, loss of use, interruption of business or indirect, special, incidental or consequential damages, of any kind, in connection with or arising out of the furnishing, performance or use of the technical data herein. No obligation or liability to recipient or any third party shall arise or flow out of ams AG rendering of technical or other services.

Document Status

Document Status	Product Status	Definition
Product Preview	Pre-Development	Information in this datasheet is based on product ideas in the planning phase of development. All specifications are design goals without any warranty and are subject to change without notice
Preliminary Datasheet	Pre-Production	Information in this datasheet is based on products in the design, validation or qualification phase of development. The performance and parameters shown in this document are preliminary without any warranty and are subject to change without notice
Datasheet	Production	Information in this datasheet is based on products in ramp-up to full production or full production which conform to specifications in accordance with the terms of ams AG standard warranty as given in the General Terms of Trade
Datasheet (discontinued)	Discontinued	Information in this datasheet is based on products which conform to specifications in accordance with the terms of ams AG standard warranty as given in the General Terms of Trade, but these products have been superseded and should not be used for new designs

Revision Information

Changes from 1.1 (2013-Oct-31) to current revision 1-04 (2015-Dec-07)	Page
1.1 (2013-Oct-31) to 1-02 (2015-Aug-07)	
Content was updated to the latest ams design	
Noise Suppressor section was removed	
Updated Key Benefits & Features	2
Updated Figure 34	25
Added Mechanical Data section	38
Updated Package Drawings & Markings section	39
Updated Figure 42	40
1-02 (2015-Aug-07) to 1-03 (2015-Nov-19)	
Removed Linearization of the Output section	
Updated text under Detailed Description	9
Updated Figure 13	11
Updated Figure 18	15
1-03 (2015-Nov-19) to 1-04 (2015-Dec-07)	
Updated Figure 2	2
Updated Figure 33 [DATA11 (0x0B), DATA12 (0x0C)]	25
Updated Mechanical Data section	38

Note(s) and/or Footnote(s):

1. Page and figure numbers for the previous version may differ from page and figure numbers in the current revision.
2. Correction of typographical errors is not explicitly mentioned.
