Conductive D-Type Connector Cover Features:

Conductive Composite

Permanently volume conductive and free of carbon black particulate. The connector covers do not leave black marks and are more suited to clean situations. Meets the requirements of NASM5501 31/32.

Made in the United States of America

Noncorrosive

Connector covers are noncorrosive and produce no visible corrosion when tested to Federal Test Method 101C using Kovar test plates.

Conformability

The material used in the covers was selected for its resilience. Properly sized, the covers provide a snug, secure fit. This helps keep connectors clean and prevents the cover from accidentally falling off.

Chemical Susceptibility*	Reactions				
Dilute Acids	Slight Attack				
Dilute Alkalines	Slight Attack				
Concentrated Acids	Slight Attack				
Concentrated Alkalines	Slight Attack				
Methanol, Ethanol, and Isopropanol	Resistant				
Hydrocarbons	Slight Attack				
Ketones	Slight Attack				
Oil and Gasoline	Slight Attack				

Material Properties	Test Method	Typical Value
Resistivity	ASTM D991	<10 ⁵ ohm-cm
Contact Corrosivity	FTM 101C Method 3005 (Kovar plate)	Pass
Elongation	ASTM D638	24%
Tensile	ASTM D638	2700 psi
Vicat Softening	ASTM MD 1525	85° C
Outgassing	ASTM E595	Pass

Unless otherwise noted, tolerance ± 10%

Specifications and procedures subject to change without notice.

"It should be understood that any object, item, material or person could be a source of static electricity in the work environment. Removal of unnecessary nonconductors, replacing nonconductive materials with dissipative or conductive materials and grounding all conductors are the principle methods of controlling static electricity in the workplace, regardless of the activity." [ESD Handbook ESD TR20.20; section 2.4 Sources of Static Electricity]
