

MICRO SWITCH Global Limit Switches

GLA Series

002408

Issue 4

Datasheet

DESCRIPTION

Honeywell's MICRO SWITCH GLA Limit Switch Series is designed to global EN50041 standards and well suited for worldwide applications. The modular design (heads/actuators, bodies, and contact blocks) of the limit switch allows for rapid response to meet customer applications. The rugged die-cast metal housing of the switch is ideal for indoor and outdoor applications where a degree of IP or NEMA enclosure sealing is required. Normally closed snap-action contacts and normally closed slow-action contacts are positive opening (→).

DIFFERENTIATION

- Side rotary actuator incorporates dual bearing design which prevents side loading during operation
- Removable contact block allows for ease of wiring
- Modular design of limit switch (heads/actuators, bodies, and contact blocks) allows for rapid customization and delivery
- Optional 1 LED or 2 LED pilot lights in limit switch front cover to indicate voltage present to switch and/or switch actuated
- Specialty contact options, sequential (2-step style) action, and center neutral action

PORTFOLIO

The GLA Limit Switch Series with standard or plug-in housings (EN50041 design, with 30 mm x 60 mm mounting) complement the smaller GLC Series, GLD Series and GLE Series (EN50047 design, with 20 mm to 22 mm mounting).

The GLA Series is part of the MICRO SWITCH Limit Switch Series that includes the [HDLS Series \(Heavy Duty Limit Switch\)](#) and [General Purpose Limit Switch \(LS\) Series](#).

FEATURES

- Designed to EN50041 standard, 30 mm x 60 mm mounting
- Available as a standard body or plug-in body with same footprint
- Wide range of actuator heads and levers
- Side rotary switches factory set for CW and CCW actuation; field adjustable for CW only or CCW only
- Certified for global applications; UL/CSA (Americas/Canada), CE (Europe), CCC (Asia-Pacific)¹
- Conforms to IEC/EN 60947-5-1, EN45545-2 (GLA/GLF Series)
- Sealed to IP67 and NEMA/UL 1, 4, 12, and 13
- Operating temperatures as low as -40 °C to 85 °C [-40 °F to 185 °F]
- Multiple connectivity options to meet most applications: four different threaded conduits, micro-change connectors, mini-change connectors, Deutsch style 4-pin connector
- One or two LED indicators available in switch body
- Single pole double throw, two pole single throw contact blocks (1NC/1NO, 2NC, 2NO) are galvanically (electrically) isolated (Zb) and designed with bifurcated contacts
- Two pole double throw contact block (2NC/2NO) has each pole galvanically (electrically) isolated (Zb)
- Normally closed contacts are positive opening (→), except center neutral style
- Contact blocks are available as snap action or slow action
- Analog output available with side rotary actuator
- Mechanical life up to 15 million operations

POTENTIAL APPLICATIONS

- Aerial lifts, boom lifts
- Automotive assembly lines and machining centers
- Agriculture equipment
- Conveyors
- Doors and apertures
- Material handling
- Machine tools
- Railroad locomotives and railroad signaling equipment
- Transportation hubs
- Valves

VALUE TO CUSTOMERS

- Easy to install and maintain
- Rugged metal construction

¹CCC certification is not available on the GL Series Switches sold within Europe, Middle East, and Africa. Option for CCC certification in these regions is available upon request.

MICRO SWITCH Global Limit Switches, GLA Series

Table 1. Specifications

Characteristic	Parameter
Description	EN50041 industrial grade limit switch, standard body or plug-in body with 30 mm x 60 mm mounting
Certifications	CE, CCC ¹ , CSA, UL
Conforming to standards	IEC/EN 60947-5-1, EN45545-2 (GLA/GLF Series)
Housing material	Electrostatic epoxy coated zinc
Actuators	Side rotary, top pin plunger, top adjustable plunger, top roller plunger, top roller lever, wobble stick (multi-directional) actuator, cat whisker (multi-directional) actuator
Termination	0.5-14 NPT; PG 13,5; M20; G 1/2 (PF 1/2); Deutsch style 4-pin connector; Micro-change connector; Mini-change connector; Pre-cabled
Contact options*	1NC/1NO, 2NC, 2NO, 2NC/2NO, 2NC/2NO sequential, 2NC/2NO center neutral
Contact type	Snap action, slow action break-before-make (BBM), slow action make-before-break (MBB), slow action
Contact material	Silver alloy (standard), gold-plated (low-energy applications)
Utilization category	ac15, A300/A600; dc13, Q300
Rated operational voltage (Ue)	240 Vac, 600 Vac, 250 Vdc
Rated operational current (Ie)	3 A, 1.2 A, 0.27 A
Thermal current (Ith)	10 A, 2.5 A
Rated insulation voltage (Ui)	300 V; 600 V
Rated impulse withstand voltage (Uimp)	2500 V
Short circuit protective device (SCPD), type, and rating	Class J fuse, rated 10A, 600 V
Pollution degree	3
Sealing	IP67; NEMA/UL 1, 4, 12, and 13
Operating temperature	-40 °C to 85 °C [-40 °C to 185 °F] side rotary actuator -25 °C to 85 °C [-13 °F to 185 °F] other actuators
Mechanical life	Up to 15 million operations
Vibration (actuator not fitted)	10 g conforming to IEC 68-2-6
Shock (actuator not fitted)	50 g conforming to IEC 68-2-27
Options	Standard limit switch with 1 LED pilot light (GLF Series) or 2 LED pilot lights (GLH Series) in front cover Plug-in limit switch with 1 LED pilot light (GLG Series) in front cover

*Normally closed (NC) contacts are positive opening except for the center neutral limit switches

¹CCC certification is not available on the GL Series Switches sold within Europe, Middle East, and Africa. Option for CCC certification in these regions is available upon request.

			05 2NO, slow action	26 2NC/2NO, DPDT, snap action, center neutral		2W 38 to 93 mm adjustable, 38 x 12 rubber roller			
			35 2NO, slow action, gold contacts	29 2NC/2NO, DPDT, snap action, gold contacts, center neutral		2Y 38 to 93 mm adjustable, 50 x 10 rubber roller			
			06 2NC, slow action	27 2NC/2NO, DPDT, snap action, LED, center neutral					
			36 2NC, slow action, gold contacts	30 2NC/2NO, DPDT, snap action, LED, center neutral, gold contacts					

* Levers beginning with codes 1 to 5 are for **A** and **J** style side rotary heads only.
Actuators beginning with Code 7 are for **E** style wobble stick head only.
Actuators beginning with Code 8 are for **K** style cat whisker head only.

NOTE: Basic switch codes **02 and **12** may only be used with body styles **B** and **G**.

* Levers beginning with codes 1 to 5 are for **A** and **J** style side rotary heads only. Actuators beginning with Code 7 are for **E** style wobble stick head only. Actuators beginning with Code 8 are for **K** style cat whisker head only.

APPLICATION INFORMATION

Side Rotary Assemblies

The side rotary assemblies incorporate a feature for adjusting the free position of the side rotary lever. The EN 50041 body style allows infinite adjustment and reclamp. See the following diagrams for details of the mechanism in each case.

Figure 12. Standard EN 50041 Body Style

There are two lever mounting options:

1. By fully seating the lever in one of the four 90° detent positions on the shaft hub which provides positive lever retention.
2. By mounting the lever on the serrated portion of the shaft (which enables the lever to be mounted in any position).

To change the rotary lever's free position:

1. Use a 3 mm hex Allen wrench to loosen the Allen screw, as shown in Figure 13, below.
2. Back off the lever 2 mm and move it to the desired free position.
3. Retighten the Allen screw.
4. Check to see if the free position is satisfactory for the application.
5. Repeat the adjustment procedure if necessary.

A teller tab located at the bottom of the lever (see diagram below) helps prevent lever slippage. It enables the installer to detect the correct tightening torque. When this tab cannot be moved, the Allen screw has been tightened properly.

Figure 13. Allen Screw and Teller Tab Location

EN 50041 Side Rotary Actuator Direction Adjustment

As furnished, GLS rotary switches will operate when the lever is rotated from either the left or right. They can be field modified to operate in one direction only (Clockwise CW; Counter clockwise CCW) by following these steps:

1. Carefully remove the complete head assembly.
2. Turn the head assembly upside down as shown in Figure 14.
3. Pull the plunger mechanism out and rotate it through 90° increments until the alignment tab points to the desired function (CW, CCW, or CW and CCW).
4. Push plunger mechanism in.
5. Reassemble the head assembly and re-test the switch in its application.

Figure 14. Actuation Adjustment

REPLACEMENT INSTRUCTIONS

All levers for side rotary assemblies are available as replacement parts. All basics, except the plug-in, can be replaced. All EN 50041 heads can be replaced. The replacement procedures for these components are straightforward in nature.

Side Rotary Levers

Remove the lever from the product being replaced. On EN 50041 product this is achieved by loosening the Allen screw holding the lever on the shaft. Replace the lever and tighten the Allen screw or combination screw. Re-test the switch in its application.

Heads

All EN 50041 style switch heads can be removed and replaced.

1. Remove the head by unscrewing the four retaining screws on the head assembly.
2. Ensure replacement part is identical to one being removed.
3. Re-test the assembly and ensure correct operation.

Basic Switches

Non-plug-in

Basic switches can be removed and replaced by following this procedure:

1. Remove the cover from the body.
2. Before disconnecting the switch wiring, carefully note the wiring arrangement for your application, particularly the safety ground connection.
3. Remove the basic switch retaining screw.
4. Remove the basic switch and install the replacement basic switch.
5. Use the retaining screw to install the new basic switch – ensure that it is correctly seated in the switch body.
6. Wire the switch terminals as before.
7. Before replacing the cover – ensure that the basic switch wires are not twisted or otherwise lifted from the basic switch (to prevent them from becoming trapped when the cover is replaced).
8. Test the switch in its application.

Figure 15. Retaining screw location

MICRO SWITCH Global Limit Switches, GLA Series

Basic Switches

Plug-in EN50041 body style

The switch enclosure portion of this two-piece body style plugs into a pre-wired terminal block mounted in the application. Replacement is accomplished by unplugging the old switch enclosure and plugging-in a new switch enclosure (basics are permanently staked in the switch enclosure).

LED WIRING

The GLF, GLG, and GLH versions of GLS (EN 50041) come complete with LED indicators. These indicators can be wired in a variety of ways. Operation can indicate switch free or switch operated depending on the wiring arrangement employed. The table below indicates the body styles and indicators offered.

Table 12. LED Series

Body	Function	Specification
GLF	1 LED	12 ➔ 250 Vac and dc less than 1.5 mA draw
GLG	1 LED plug-in	12 ➔ 250 Vac and dc less than 1.5 mA draw
GLH	2 LED	18 ➔ 30 Vdc 7 mA typ. current draw

The following wiring diagrams show possible configurations that can be used for the LEDs. Combinations of these arrangements can be used where the dual LED versions of GLS are employed.

Figure 16. Wiring Diagram 1

In Figure 16, Wiring Diagram 1, the basic switch contact is open. The current for the LED can flow through the LED (via the load) and the LED illuminates.

Figure 17. Wiring Diagram 2

In Figure 17, Wiring Diagram 2, the basic switch contact is closed. The current for the LED cannot flow through the LED and the LED will not illuminate.

Figure 18. Wiring Diagram 3

In Figure 18, Wiring Diagram 3, regardless of the position of the basic switch, the current for the LED can flow through the LED and the LED will illuminate indicating power available.

Figure 19. Wiring Diagram 4

In Figure 19, Wiring Diagram 4, when the load is energized the LED will illuminate. The above examples suggest options with these versions of GLS. The LED pilot lights should be treated as "for indication only" devices.

Note:

While every effort is made to ensure that the above guidelines are accurate, no responsibility can be accepted for failure to apply good engineering practice to machinery design and use of Honeywell products. Never apply any of the procedures outlined above on live circuits. Ensure that testing of changes is carried out with no risk of injury during tests. These guidelines are produced to help our customers make the right choices in applying our Limit Switches to general applications. Contact your local Honeywell representative if you have any difficulties.

Warranty/Remedy

Honeywell warrants goods of its manufacture as being free of defective materials and faulty workmanship during the applicable warranty period. Honeywell's standard product warranty applies unless agreed to otherwise by Honeywell in writing; please refer to your order acknowledgment or consult your local sales office for specific warranty details. If warranted goods are returned to Honeywell during the period of coverage, Honeywell will repair or replace, at its option, without charge those items that Honeywell, in its sole discretion, finds defective. **The foregoing is buyer's sole remedy and is in lieu of all other warranties, expressed or implied, including those of merchantability and fitness for a particular purpose. In no event shall Honeywell be liable for consequential, special, or indirect damages.**

While Honeywell may provide application assistance personally, through our literature and the Honeywell web site, it is buyer's sole responsibility to determine the suitability of the product in the application.

Specifications may change without notice. The information we supply is believed to be accurate and reliable as of this writing. However, Honeywell assumes no responsibility for its use.
