

True peak acceleration loop powered sensors

PC420ATP series

Wilcoxon's PC420ATP series sensors provide 24/7 output of true peak acceleration, allowing for continuous trending of overall machine vibration in process control systems. True peak output is particularly useful in detecting loose parts on reciprocating machinery. The trend data alerts users to changing machine conditions and helps guide maintenance in prioritizing the need for service.

Table 1: PC420ATP-yy model selection guide

4-20 mA output type	yy (4-20 mA full scale)
ATP = True peak output, acceleration	05 = 5 g
	10 = 10 g
	20 = 20 g

Key features

- True peak output helps detect high-frequency impacts on reciprocating machines
- Intrinsically safe certified and explosion-proof models available
- Easily integrated into existing process control systems
- Manufactured in an approved ISO 9001 facility

Certifications

True peak acceleration loop powered sensors

PC420ATP series

SPECIFICATIONS

Full scale, 20 mA, ±5%	see Table 1 on page 1	
Frequency response:	±10%	10 Hz - 1.0 kHz
	±3 dB	4.0 Hz - 2.0 kHz
Repeatability	±2%	
Transverse sensitivity, max	5%	
Power requirements (2-wire loop power):		
Voltage at sensor terminals	12 - 30 VDC	
Loop resistance ¹ at 24 VDC, max	700 Ω	
Turn on time, 4-20 mA loop	<30 seconds	
Grounding	case isolated, internally shielded	
Temperature range	-40° to +85° C	
Vibration limit	250 g peak	
Shock limit	2,500 g peak	
Sealing	hermetic	
Sensing element design	PZT, shear	
Weight	162 grams	
Case material	stainless steel	
Mounting	1/4-28 tapped hole	
Output connector	2 pin, MIL-C-5015 style	
Mating connector	R6 type	
Recommended cabling	J9T2A	

Accessories supplied: SF6 mounting stud (metric mounting available); calibration data (level 2)

Connections	
Function	Connector pin
loop positive (+)	A
loop negative (-)	B
ground	shell

Notes: ¹ Maximum loop resistance (R_L) can be calculated by:

$$R_L = \frac{V_{DC \text{ power}} - 10 \text{ V}}{20 \text{ mA}}$$

DC supply voltage	R_L (max resistance) ²	R_L (minimum wattage capability) ³
12 VDC	100 Ω	1/8 watt
20 VDC	500 Ω	1/4 watt
24 VDC	700 Ω	1/2 watt
26 VDC	800 Ω	1/2 watt
30 VDC	1,000 Ω	1/2 watt

² Lower resistance is allowed, greater than 10 Ω recommended.

³ Minimum R_L wattage determined by: $(0.0004 \times R_L)$.

Typical circuit
