Mounting/Layout Considerations

Mount these devices with brown mark facing up.

**Line width should be designed to provide 50 Ω impedance matching characteristics.

With Matching Circuit

No Ground plane here (keep out area)

- Solder Resist
- Soldering pad

**matching circuit and component values will depend on PCB layout, thickness, material, etc.

****Note 2:** It is recommended that the designer leave available slots for a "pi" (or shunt-series-shunt) network. The antenna matching network values above are used when antenna is mounted on Johanson's evaluation board. The matching values on client's PCB will be different.

Go to: <http://johansontechnology.com/tuning> and see how to obtain the new values. If you need further help, contact our RF Applications Eng Team at:
